Comments	MISTI Village Dataset. Each row contains data from one unique village surveyed by MISTI in Waves 1-5. The dataset is in wide format. Each variable is identified by a wave number and a proximity to the village. Data include village demographic characteristics, violent incident counts, stabilization and NSP project activities, and perception indicators from individual survey interviews aggregated to the village mean. These data were analyzed for the MISTI impact evaluation of USAID stabilization programming in Afghanistan, 2012-2014.

Notes on the computation of the Stability and Resilience Index Indicators from the MISTI survey data, variables v1 - v55

<p>The dataset includes 53 variables that were tested for indications of program impact. Of these indicators, 40 are individual survey items and 13 are index variables that are calculated by combining more than one survey item. All variables are rescaled to 5 points if a five point scale was not used in the original survey question. All variables are aggregated from the individual survey interviews to the village mean. Index scores were first calculated for individuals before aggregation to the village level. Individual cases with missing values were deleted listwise before the index scores were calculated.</p>
