COMPENDIUM OF CASE STUDIES ON FAITH-BASED AND COMMUNITY INITIATIVES TO ACHIEVE U.S. DEVELOPMENT GOALS
Dear Partners:

Since its inception in the 1950s, the United States Agency for International Development (USAID) has worked in tandem with faith-based, faith-inspired and local community organizations to enhance the impact of foreign assistance through the mutual leveraging of financial and technical resources for the benefit of the countries we serve.

Over this interval, USAID has developed numerous partnerships and collaborative arrangements with a number of faith-based and local community organizations. We remain cognizant of the reality that there are approximately six billion religiously-affiliated people around the world. The World Bank's “Voices of the Poor” study found that “religious leaders and institutions are often the most trusted institutions in developing countries.” The international community increasingly needs to recognize and value the indispensable role of faith-based and community groups in the implementation of the 2030 Sustainable Development Goals (SDGs) and helping to end the need for foreign assistance.

USAID’s Center for Faith-Based and Community Initiatives (CFBCI) has commissioned this compendium of case studies to illustrate the Agency’s commitment to working with faith-based and community groups to end extreme poverty and promote democratic, and resilient societies. These successful partnerships have yielded invaluable returns despite risks and uncertainties and are extremely rich and diverse in nature, varying in geography and program sector.

From my own personal experiences in East Africa, I know firsthand the vital work that faith-based and community groups do to address human need and I strongly encourage us to work in innovative ways to expand and strengthen our mutual collaboration with grassroots organizations throughout the developing world.

Sincerely,

Mark Green

</table>
INTRODUCTION

Worldwide, understanding religion is imperative to understanding local civil society. Gallup polls show that four out of five people on the planet believe in something greater than themselves, often viewing all sectors of life through the prism of this belief. In many cases, the reach of these religious communities allows for their developmental impacts to significantly enhance the efforts of governments. Though religious belief and identity are often used within conflict environments to galvanize population’s involvement to destabilize societies, those same forces of belief can contribute significant good to civil society and, when properly engaged, can become invaluable advocates and implementers of human progress and peaceful coexistence on a global scale. Effectively, engaging with religious and community leaders, faith-based and faith-inspired entities worldwide is critical for effective U.S. diplomatic and development policy.

For over five decades, USAID has partnered and collaborated with civil society actors, of which faith-based, faith-inspired and local community organizations play a vital role towards achieving developmental goals.

The United States writ large is an extraordinarily generous country. Faith-based entities in America contribute billions of dollars every year in private funding to international development, as the yearly tracking provided by the Hudson Institute amply demonstrates. In July 2015, the UK medical journal The Lancet conducted an in-depth review of faith-based health care in sub-Saharan Africa, and quoted former World Bank President James Wolfensohn in acknowledging that “half the work in education and health in sub-Saharan Africa is done by the church.”¹ In FY 2015 alone, U.S. faith-based organizations (FBOs) listed total revenues from private sources at $5.75 billion, ² which, coupled with their mobilization of substantive numbers of volunteers, provides considerable leverage and matchability to U.S. official

---

development assistance. The Lancet study reaffirmed that faith-based providers play an important role, particularly in fragile states with weakened healthcare systems. Additionally the study shows that “thousands of faith-based, community-based and non-governmental organizations have contributed to the effective implementation of all aspects of HIV/AIDS response.”

The U.S. Strategy on Religious Leader and Faith Community Engagement - whose objective is to create a “level playing field” of equal opportunities, treatment, and expectations of religious actors in partnership with USAID and USG agencies - has been firmly in place since 2013. Also USAID’s Rule on Participation by Religious Organizations in USAID Programs ensures that religious organizations are able to compete fairly for USAID funding, and that USAID programming decisions are based on the program eligibility criteria, without regard to the religious character or affiliation of applicants. Though faith-based and community groups comprise but a segment of USAID’s partner base, this publication and the successful partnerships highlighted within it depict the role faith-based and community actors play in providing lifesaving healthcare, disaster relief services, building community resilience, and affecting positive behavior change. USAID has been, and continues to be a proud partner in supporting many of these efforts.

This compendium of stories of cooperation with faith-based, faith-inspired and local community organizations and their leaders demonstrates both the significant added value of working together and the considerable potential for scaling up the impact of USAID’s work. To the entities that so generously contributed to this compilation, we thank you for your continuing commitment to our shared efforts.
CASE STUDIES
Religious and Community Leaders as Partners for Communication, Outreach, and Mobility: Adventist Development and Relief Agency’s (ADRA) ASOTRY Project

Location: Madagascar
Scale: Program designed to reduce food insecurity and vulnerability across four regions of Madagascar
Date: September 2014 – September 2019
Headline result: 80,335 beneficiaries trained in child health and nutrition
USAID Contribution: $36,999,964

Background

In Madagascar, 83% of households are food insecure or vulnerable to food insecurity. More than 90% of the population lives on less than $2 per day, and over 50% of children are stunted.

Through its experience in Madagascar’s context, ADRA identified four underlying causes for food insecurity in the country: 1) poor health and nutrition practices; 2) low levels of productivity; 3) lack of access to food; and 4) vulnerability to natural disasters. These align with the four pillars of food security: utilization, availability, access, and stability.

The response to the problem—ASOTRY, meaning “harvest” in Malagasy—is a five-year innovative and integrated food security program designed to reduce food insecurity and vulnerability in 11 districts across Madagascar. ASOTRY was designed to effect substantial and tangible improvements in malnutrition, agricultural productivity, and household and community resilience. The program addresses the major underlying causes of food insecurity through the following components:

1) Improved Health and Nutrition—Core to the root of health and nutrition problems is behavior, which is influenced directly by knowledge and resource availability. ADRA focuses on nutrition for women of reproductive age and children under two, with an emphasis on malnutrition prevention through behavior change, knowledge and training. ADRA also provides linkages to income generation and agricultural production, which increases access to financial resources and diverse, high quality foods.

2) Increased Access to Food for Vulnerable Households—Increased production is key to food availability. To achieve this, ASOTRY increases knowledge, improves technologies and techniques, and promotes crop diversification through an innovative farmer training model. Market linkages—and increased profitability—are achieved through Farmer Business Associations (FBAs) and private working with religious and community leaders facilitated program communication, outreach, and access to remote communities, enabling ADRA to reach tens of thousands of vulnerable people in Madagascar.
sector partnerships. Lastly, household access to food on the market is facilitated by Village Savings and Loan (VSL) groups and other income generating activities.

3) Improved Disaster Mitigation— Community resilience is the linchpin of ASOTRY, which focuses on investing in infrastructure such as roads, irrigation, and WASH facilities; sustaining natural resources through rehabilitation and reforestation; and increasing community capacity to prevent, mitigate, and respond to disasters through early warning systems. These are achieved through Disaster Risk Management Committees, Disaster Preparedness and Mitigation Plans, Infrastructure Management Associations, and community-based natural resource management.

Faith-Based and Community Initiatives

Throughout Madagascar, religious and community leaders are well-respected and influencers of behaviors. ASOTRY regularly engages them to share announcements with their communities related to maternal and child health activities; practicing and promoting proper hygiene behaviors, such as handwashing and using soap or ash; sensitizing communities on the benefits of constructing covered latrines; and promoting local contributions to constructing and maintaining infrastructure, such as storage facilities. Additionally, faith and community leaders are sometimes “Village Agents,” responsible for training new VSL groups or promoting farmer field schools and FBAs.

ADRA has learned through ASOTRY that influential faith and community leaders have a shared interest in health and wellbeing, which enables them to be successful purveyors of positive behavior change messages and has proven useful in mediating minor project-related community misunderstandings.

Results

To-date ASOTRY has surpassed or made strong progress toward its key objectives.

In the project’s first component, ADRA has trained 80,335 people in child health and nutrition, involved 18,220 children under two in growth monitoring and promotion, and provided Care Group home visits to 25,838 households with pregnant and lactating women or children under five.

In the second component, ASOTRY has helped 15,677 farmers improve technologies or management practices, assisted in developing 6,444 hectares under improved technologies or management, and facilitated access to service and input providers for 8,419 farmers.

In the third component, ASOTRY improved the infrastructure of 55 communities, improved or constructed 102.1 km of roads, enabled irrigation and drainage for 2,174 hectares of land, established 130 tree nurseries, and led 4,551 people to use climate information or implement risk reduction actions to improve resilience to climate change.

Conclusions and Recommendations

Partnerships with religious and community leaders have proven invaluable to ASOTRY. ADRA has witnessed time and again the tremendous impacts these influencers have, as key community resources, in improving lives. Engaging religious and community leaders in development and humanitarian assistance leads to effective and sustainable change.
Capacity Building with Local Organizations in Kenya: Aga Khan Foundation’s (AKF) Yetu Initiative

Local organizations, including local faith-based organizations, are building their capacity to engage with Kenyan citizens and build local support for their programs.

Background

The goal of Yetu, meaning “Ours” in Swahili, is to build the capacity of Kenyan CSOs (civil society organization) to engage and catalyze citizen support for their missions. Yetu builds local civic engagement capacity by building alliances between CSOs, foundations, and businesses to mobilize at least $1 million in assets for local development needs, improving organizational capacity of Kenyan CSOs, and enhancing the Kenyan cultural and technological environment for community philanthropy.

Kenyan CSOs have been supported to build and deliver targeted community engagement efforts, with accompanying awareness-raising materials, fundraising drives, and capacity building aimed towards their organizational sustainability. A cutting-edge online and mobile philanthropy platform has been designed and developed, reducing philanthropic transaction costs and engaging a younger and more tech-savvy population in local philanthropy - not just monetary contributions, but also giving of their time, skills and energy.

Yetu conducts organizational capacity assessments upon beginning close partnership with a local CSO and supports the partner to develop, implement and continuously monitor institutional strengthening plans (ISPs) as well as resource mobilization plans. As well as this close partnership with 23 CSOs, an additional 85 CSOs have improved capacity as a result of blended learning courses, boot camps, regional workshops and other trainings provided through the Yetu Initiative.

Faith-Based and Community Initiatives

The Yetu Initiative works with a myriad of CSOs, such as the Kenyan Community Development Foundation (KCDF). Also, one of Yetu’s core grantees is the Brothers of St. Joseph’s, a religious Congregation of Brothers in the Catholic Church based in Mweiga Nyeri Kieni West District, Central Province Kenya, under the Archdiocese of Nyeri. Through their work with Yetu, Brothers of St. Joseph’s is strengthening their ability to mobilize local assets in support of their work in the community. The Brothers of St. Joseph’s was formed to provide a community-based link to facilitate...
integrated interventions that would contribute to the improvement of quality of life of orphaned and vulnerable children and other vulnerable groups in the community. The Brothers of St. Joseph’s was among the top five grantees in 2015 through a competitive call for participation in the Yetu Initiative that attracted over 300 applications. This Initiative’s intent is to directly address longer-term local development needs via community philanthropy. It has attracted a number of funding partners, including: the East Africa Association of Grant Makers; Nation Media; Diamond Trust Bank; Global Giving; Safaricom Foundation; and others. It is envisaged that local philanthropy will provide a sustainable alternative to bridge the funding gap to meet ever increasing needs for responding to development work and humanitarian aid. The Initiative is building a community of practice in which CSOs strengthen both their assets and capacity.

**Results**

The yetu.org e-philanthropy platform did not exist two years ago, but as of June 2017, 4,716 contributions had been made through the platform. As of August 2017, campaigns supported by Yetu had raised $390,000 in cash, in-kind donations and volunteer time from individuals, corporations, foundations and local government for local development needs. This number will continue to grow, through continued returns on past campaigns, ongoing campaigns, and 3 new campaigns currently being planned. Far surpassing the original target of 5 million positive messages, Yetu and its CSOs have garnered 21,868,297 positive messages as of June 2017, as measured through social media tracking.

CSOs have drawn on each other’s strengths as a result of being brought together and planning their resource mobilization with Yetu. For example, Omega Foundation and St. Joseph’s have rallied their partner CBOs who have actively taken part in their community campaigns. A total of 20 CSOs have completed or are midway through a campaign cycle with support from Yetu, implementing different fundraising strategies, using traditional and digital media to communicate and market the campaign.

They have established relationships with corporate partners that are willing to continually work with them.

**Conclusions and Recommendations**

The program continues to build the capacity of CSOs in Kenya, helping grow their fundraising campaigns and training more CSOs in "boot camps." Recommendations for capacity building with faith-based, local CSO partners include the need to understand the structure and systems in place governing an FBO that might be slightly different than for other CSOs. In St. Joseph’s case, the brotherhood could only make certain decisions in consultation with church leaders, which had to be accounted for in programming. It was also very important to be aware of and sensitive to traditions and practices within the FBO that were inspired by their faith; for instance, though this would not be expected at other CSOs, when Yetu Initiative team members meet with St. Joseph’s, they share a meal with the brothers. Finally, in attempting to foster the mobilization of community assets for development, it is critical to recognize and build on the trust that FBOs and religious institutions enjoy in many communities. The community looks to them for leadership and support in ways beyond what they do for many CSOs.

Local FBOs have great capacity in their ability to build a base of committed volunteers with the influence of local religious leaders. However, the example of St. Joseph’s also shows that they can lack knowledge around project management and fundraising, which are barriers that will stifle their work if not overcome. Community philanthropy initiatives such as The Yetu Initiative are therefore vital to unlock the potential of CSOs, faith-based and secular, working for their communities.
Family Planning Advocates: Christian Connections for International Health’s work with Uganda Protestant Medical Bureau

Training and openly discussing family planning with religious leaders resulted in a significant increase in their knowledge of contraception and the healthy timing and spacing of pregnancies.

Background

The maternal mortality rate in Uganda is one of the highest in the world, at an estimated maternal mortality of 343 deaths per 100,000 live births. With a high fertility rate and only 23% of women using contraception\(^1\), the Government of Uganda has committed to reduce the unmet need for family planning to 10% and to increase the modern contraceptive prevalence rate to 50% by the year 2020.\(^2\)

This activity was part of a larger program to advance and support community programs that seek to improve the overall health of communities, especially in relationship to family planning. The activity prepared local leaders, including religious and community leaders, to discuss and promote healthy timing and spacing of pregnancies (HTSP) and to ensure women are receiving access to quality family planning (FP) information and services from faith entities. As part of the project, the Uganda Protestant Medical Bureau (UPMB), with support from CCIH, brought together more than 40 local leaders, and Ugandan government officials in Kampala, Uganda for a two-day meeting on the role of faith leaders in promoting healthy families and family planning. Discussions included the identification of family planning methods available, where to receive them, and support to improve couples’ communication around family care and wellbeing.

To equip local leaders to discuss and promote healthy timing and spacing of pregnancies, UPMB then conducted a two-day training for a diverse group of nearly 80 religious leaders, including Catholic, Muslim, Pentecostal and Protestant leaders. The first training was held October 27-28, 2015 in Jinja, with the second occurring November 16-17, 2015 in Mbarara.

The objectives of the training were to prepare the leaders to use knowledge of reproductive health to educate and counsel community members and to refer them to health facilities for FP/RH services; explain key HTSP messages and understand their links to family planning; identify and clarify rumors about contraception, family planning, and what they mean; determine the family planning methods available in the local context and where to receive them; support couples to improve communication and shared decision-making; and conduct learning.

---

\(^1\) [https://dhsprogram.com/pubs/pdf/FR264/FR264.pdf], Uganda Demographic and Health survey 2011

sessions for congregations on HTSP. The course also included a simulation exercise with role play where the participants practiced sharing information on family planning with congregants.

**Faith-Based and Community Initiatives**

Religious leaders are in a prime position to change harmful attitudes about family planning. They are some of the most important and respected opinion leaders in Ugandan communities who can help shift social norms. By virtue of their status and position in society, religious and community leaders can play a critical role in the community to encourage healthy behaviors. Training of these leaders was central to the project and most attendees at the in-person meetings and sessions were from faith-based organizations. By educating local leaders that family planning protects the health of women and their children through healthy birth spacing, CCIH was able to overcome social barriers to facilitate discussions.

**Results**

Religious and community leaders improved their knowledge about family planning significantly as a result of the training. The faith leaders scored an average of 57% on a test after the training, and only 30.7% before the training, an increase of more than 83%. One community leader improved his score from 5% to 52% after receiving the training. Participants also reported that a simulation exercise helping them prepare information on FP with their congregation was very helpful.

The evidence is clear that using family planning to space or limit births improves the health to women and children. Leaders affirmed that family planning programs must stress voluntary and informed decision making. Programs should be culturally appropriate and developed with strong collaboration from local communities, with respect for their beliefs, and support the potential for all community members to live an abundant life.

**Conclusions and Recommendations**

Faith communities and religious leaders should have full information about available methods of family planning and be empowered to make their own decisions on which ones are right for them. When they are in a comfortable environment with their peers, religious leaders are very open to discussing family planning and learning about its benefits. Knowledge about family planning among religious and community leaders can be greatly increased through training sessions and realistic simulation exercises.

Local faith-based and secular organizations support peacebuilding and reconciliation efforts in the Central African Republic.

Background

The Central African Republic (CAR) continues to experience sustained political instability and intermittent armed conflict. Long-standing economic and political grievances have led to violence along ethno-religious lines. Against this backdrop, the Central African Republic Interfaith Peacebuilding Partnership (CIPP) was formed. The goal of the CIPP project is for Central African institutions to lay the groundwork for sustainable social cohesion in CAR. CIPP has three objectives: 1) capacity strengthening for CAR institutions; 2) generating secure livelihoods; and 3) trauma healing and peace education services.

1) CIPP’s capacity strengthening model of partnership engages beneficiaries (Central African civil society, faith-based, and government institutions) to reinforce individuals’ skills within these institutions through training and other learning events as well as provide the institutions with technical and financial resources necessary to conduct social cohesion promoting activities in the communities they serve.

2) The project provides grants to business associations and micro-enterprises while at the same time helping these groups in officially register with the government and develop sustainable business plans. CIPP also strengthens the capacity of members of community savings groups through training modules on financial management and offers youth employment and accompaniment as well.

3) The training-of-trainers model for trauma healing enables Central Africans to organize trauma healing groups in a cascading fashion for communities. CIPP has a peace education workshop methodology and a mobile exhibition, which travels around the country and invites audiences from the community to view photos and listen to stories of peace emerging from their fellow citizens. CIPP’s gender-based violence (GBV) module works with well-regarded community members as GBV facilitators for workshops.

Faith-Based and Community Initiatives

CIPP is a consortium of five actors, led by Catholic Relief Services and includes Aegis Trust, Islamic Relief Worldwide, La Plateforme des Confessions Religieuses de Centrafrique (PCRC) and World Vision International. The CIPP consortium was formed to mirror the structure of and work in partnership with the PCRC (the CAR Interreligious Platform –
with representation from the Cardinal/President of the CAR Episcopal Conference, the Pastor/President of the CAR Evangelical Alliance, and the Imam/President of the CAR Islamic Community, the foremost interreligious peacebuilding body in CAR. The PCRC’s interreligious structure – with Catholic, Muslim, and Protestant representation – is reflected in CIPP’s international partner organizations. The PCRC, while serving as a national actor and prominent voice promoting peace, also benefits from capacity strengthening activities. CIPP is designed so that the PCRC assumes increasingly greater project management responsibilities as its capacity grows.

All three strategic objectives have workshop methodologies that are inclusive of the numerous religious and civil society leaders and organizations in CAR. CIPP has a capacity strengthening process with several different civil society and faith-based organizations, engaging with Muslim, Catholic, Protestant and secular institutions to ensure diverse representation in the project’s local partnerships. The activities for trauma healing and peace education include two methodologies that are co-facilitated by an interreligious team comprised of Protestant, Muslim, and Catholic facilitators. The methodologies depend on mixed participation to achieve their results of helping individual community members heal. In many of CIPP’s workshops local community and religious leaders also take part; viewed as local influencers, the ability of these religious leaders to motivate their communities toward peace is a primary entry point for many of CIPP’s activities. In addition, CIPP works for the safe return of internally displaced persons and refugees to their homes by restoring broken inter-group relationships within CAR communities.

Results

As of June 30, 2017, CIPP has conducted 120 events, trainings, or other activities with 2,011 participants. By the end of 2017, 14 local organizations will receive a small grant to support their projects. Capacity strengthening activities accompany these small grants, including capacity assessments, trainings, on-site accompaniment, and learning events. 142 individuals representing 17 business associations and 37 micro-enterprises have participated in trainings on business management skills. 19 savings groups have been formed, with approximately 335 individuals trained in the first six of nine modules of the methodology. 167 individuals have been trained in peace education. Meanwhile, 19 trauma healing facilitators have been trained and 207 individuals have participated in the trauma healing sessions.

At a higher level, the national profile of the PCRC has risen due to its response to recent violence in the southeast of the country. During this period, religious leaders have mediated between the armed groups, which enabled displaced persons of different religious identities to reach safe havens and humanitarian agencies to access sites to distribute emergency assistance.

Conclusions and Recommendations

CIPP’s strength comes from its diversity, ranging across international and national NGOs, spanning faith backgrounds, and capitalizing on the breadth of experience its members bring.

In what is perhaps the first consortium worldwide composed of such an interreligious effort to respond to and rebuild from a country’s crisis, CIPP benefits from five individual organizations’ combined expertise.

CIPP goes beyond short-term collaboration among religious leaders at the national level. Instead, the five-year commitment made by all CIPP partners speaks to their understanding that to break the cycle of violence they must all make a long-term investment in contributing to improved social cohesion.
Food Security in Ethiopia:  
Food for the Hungry’s Ethiopia Development Food Aid Program

Background

The overall goal of the project was to improve the food security status of chronically food insecure households in 9 Woredas (districts) of the Amhara Region of Ethiopia. Program activities included maternal and child health and nutrition, improving access to nutritious foods, improving access to water and sanitation (water schemes, toilets, hygiene behaviors), natural resources management (soil and water conservation, tree planting), improving access to social infrastructure (schools, health posts, vet posts), and food distribution. A total of 467,131 chronically food insecure beneficiaries were reached with food transfers, 9,335 people were trained in child health and nutrition, 63,007 pregnant women and mothers of children under two were trained in child and health and nutrition through the care group approach, 16,435 individuals received USG supported short term agricultural sector productivity or food security training, and 9,827 people received a training in natural resources management and biodiversity conservation.

Faith-Based and Community Initiatives

Ethiopia has seen progress in the sanitation and hygiene sector during the past ten years, much of it achieved through the Government’s Health Extension Program. As part of the project, Food for the Hungry (FH) engaged local religious and community leaders to help sensitize and construct public latrines for the declaration of ‘Open Defecation Free’ (ODF) zones. For example, Food for the Hungry (FH) worked with Orthodox Church priests to reach out to their congregations on the importance of sanitation and hygiene. This resulted in the building of public toilets and the declaration of ODF zones. FH contacted the religious leaders in the target communities where ODF interventions were implemented and briefed them about open defecation issues and their consequences. In addition, ODF awareness raising orientation was provided for the traditional and religious leaders, as well as selected community members. These engagements assisted in convincing the leaders to promote and publicize ODF zones and their contribution towards ensuring total sanitation. People in public places, such as churches, often use surrounding bushes for defecation. Engaging religious and community leaders was critical to facilitate construction of public latrines, which contributed to reducing instances of open defecation.
Furthermore, community leaders were actively involved in ODF celebrations, which helped persuade villagers to adopt and meet the ODF status. Their support was effective in ensuring messages were spread about latrine development and ODF zones.

Results

- A total of 467,131 chronically food insecure beneficiaries were reached with food transfers.
- 9,335 people trained in child health and nutrition.
- 63,007 pregnant women and mothers of children under two were trained in child and health and nutrition through the care group approach.
- 16,435 individuals received USG-supported short term agricultural sector productivity or food security training.
- 9,827 people received a training in natural resources management and biodiversity conservation.

In some of the watersheds where natural resource management (NRM) interventions were implemented, there are signs of vegetation reemergence, improvement of soil moisture, recharging of ground water (that is now used to harvest ground water for irrigation in some of the Woredas).

Conclusions and Recommendations

Using the ‘care group’ model helped the project reach a large number of community members through volunteers conveying health and nutrition messages. Also it has been effective in resulting behavioral change. FH has used this model (which has been used for health and nutrition projects) for agriculture in its new phase of the project since 2016.

Multi-media gender outreach tools (such as mobile cinema, image box, participatory theatre and comic books) helped reach large groups of people. It has also been effective in social behavioral change around gender equity.

Handing over treated watersheds to user groups and tying management and safeguarding of community assets with economic benefits yielded impressive results. It helped those who take care of the community resources earn money through selling of grasses, trees and engaging in beekeeping while at the same time sustainably managing community resources.

A Kebele (ward) leader declares an ODF zone with local religious leaders to his right.
Overcoming Sexual and Gender Based Violence: IMA World Health’s USHINDI project

Community groups (known as Noyaux Communautaires), which included religious leaders and local faith actors, were engaged as advocates for social and behavioral change related to gender and sexual and gender based violence (SGBV).

Background

The Ushindi program implemented a holistic approach integrating psychosocial, medical, legal, and economic activities to support survivors of sexual and gender-based violence (SGBV). The project has served a total of 30,467 SGBV survivors, which exceeds the life of project goal (24,187 persons served). Approximately 90% of survivors served were female, and 68% were 18 years or older. Residents of targeted health zones reported experiencing various types of SGBV, with rape emerging as most common (60%), followed by emotional/psychological violence (14%), physical harassment (11%), sexual harassment (4%), denied resources/opportunities (3%), and unknown/other (7%).

The project has assisted 30,033 people with recovery from SGBV through psychosocial support. Confidential one-on-one counseling by community-based lay counselors is the cornerstone of Ushindi’s psychosocial services. Legal services were made available to 14,112 survivors. This counseling was provided by lawyers in legal clinics set up at safe houses. 16,193 SGBV survivors and their partners were reached with affordable and appropriate medical services, including post-exposure prophylaxis (PEP) kits for HIV/AIDS, prevention and treatment of sexually transmitted infections, emergency contraception, treatment of fistulas, and treatment of vaginal prolapse. Village savings and loans associations (VSLAs) were set up as a socio-economic initiative aimed at facilitating the re-integration of survivors into the community.

The VSLAs focus on funding income-generating activities that support day-to-day social needs such as nutrition, schooling, and health needs. Additionally, 2.2 million community members and school aged children were reached with outreach and public awareness messages to increase awareness and sensitivity to SGBV issues.

Faith-Based and Community Initiatives

The Ushindi model relies heavily on key faith-based, community leaders (e.g., faith counselors) and Noyaux Communautaires (community core groups) to link SGBV survivors to appropriate support services. By design, community leaders and Noyaux Communautaires are the first point of contact for survivors. They are trained to identify survivors, provide psychosocial support, and refer clients to appropriate medical, legal, and socio-economic
support services. The Noyaux Communautaires play an integral role in educating the community on SGBV prevention and response, women’s rights, and family planning through social and behavior change communication. To date, 108 Noyaux, comprising of 6,350 active members have been instrumental in serving as advocates for social and behavioral change related to gender and SGBV.

IMA’s implementation model builds on the existing trust, confidence and established networks of local faith-based organizations to provide a comprehensive package of services. By building the relationships between established community religious and public health system, the model leaves behind local capacity among health workers and communities to address the needs of survivors.

Results

Among the range of services provided by Ushindi, project participants were most likely to utilize psychosocial services (71.5%), followed by medical services (36.5%). Over 90% of medical services were sought for rape, and 61% of rape survivors received medical care within 72 hours, the critical window for treatment.

Legal services resulted in 3,175 cases taken to court with 502 judgments and 2,782 mediations achieved. Over the life of the project demand for legal services has increased steadily, likely due to the demonstrated success of legal action.

To date, 1,334 VSLAs have been created with support from Ushindi, and 4,100 survivors have enrolled in VSLA groups for socio-economic reintegration support. An additional 45,000 community members have joined the VSLAs, which have proved to be an extremely popular program intervention, reflecting the community demand for improved economic opportunities.

Conclusions and Recommendations

Local community groups can extend the reach of service platforms, change cultural norms and beliefs, and improve sustained impact of interventions. The strength of Ushindi is strongly linked to community participation and ownership.
Changing Gender Roles in Food Security: Lutheran World Relief’s (LWR) Gender in Agriculture from Policy to Practice (GAPP) Project

This project has empowered women and men to advocate for women-led activities in agriculture.

Background

The aim of the GAPP project was to achieve political and cultural changes regarding gender. It aimed to change the mindset and attitudes of men and women about gender equality, strengthen women’s capacity to advocate for food security in local public and private spaces in the rural sector, and better position women’s demands in municipal public policies and in the institutional policies of rural savings and loan cooperatives (Instituciones de Crédito Rural, ICRs).

The project provided trainings to women’s municipal networks on participation, leadership and public administration skills, empowering them to solicit public funding for their members’ agricultural enterprises. Men in the targeted communities also participated in masculinities training designed to promote changes in male attitudes towards equitable political and economic participation by women.

Local rural credit institutions were sensitized to gender and encouraged through the project to adopt gender equitable policies and practices that would increase loan provision to women. The project also provided training and engagement opportunities, such as “Knowledge Fairs” and forums, to local government officials and civil society members to build their capacity to promote public policies that reduce gender inequalities and increase public funding for women-led enterprises.

Faith-Based and Community Initiatives

Despite prevalence in the agricultural sector, women receive lower incomes and experience greater food insecurity because they have less access to productive assets, technology, and agricultural extension and financial services. Women’s leadership in the agricultural sector remains limited by disparities in earned income and wages, as well as, limitations in political empowerment.

In recent years, the government of Honduras has addressed the gender gap through several public policies, including the National Equal Opportunity for Women and food and nutrition laws. However, reports suggest the lack of adequate implementation mechanisms at the regional and municipal levels.

Location: Honduras
Scale: 33,712 beneficiaries
Date: October 2013 – September 2016
Headline Result: Nine municipal women’s networks raised $68,768.93 in public funds for 170 projects.
USAID Contribution: $833,334; Other Funders’ Contribution: $215,670
**Results**

By the close of the project, 3,176 women (127% of target) from nine municipal women’s networks (RMMs) participated in trainings and activities designed to strengthen their leadership skills to advocate for more investment in women’s agricultural activities. Their self-advocacy resulted in a total of 170 projects across the nine RMMs obtaining public funding for a total investment of $68,768.93 from the nine project municipal governments.

Of the 429 men who participated in masculinity trainings, 74% (99% of target) indicated support for women’s leadership and greater agreement with the idea that men and women should have equal access to social, economic, and political opportunities.

Through women’s advocacy initiatives and the support of men in the community, 56 rural savings and loan cooperatives (124% of target) increased the number of policies and practices that facilitate women’s access to financial services, and 30 ICRs (half of the local ICRs) increased the percentage of their portfolios that go to loans for women. Additionally, with the gender sensitivity training of 636 government officials (235% of target), the nine project municipalities adopted laws, policies, and programs that promote gender equity aimed at ensuring equal opportunities for women and improving food and nutritional security.

**Conclusions and Recommendations**

The GAPP Project has proven successful in meeting, and in some instances surpassing, its main goals of achieving political and cultural changes, especially in attitudes, towards women’s work and their roles in the agricultural sector. The project successfully applied capacity-building approaches that reached the multiple stakeholders necessary for holistic change to be operationalized: women and men to enact change in the community and advocate for institutional change; ICRs to change their lending policies and practices to financially benefit more women; and government officials to enact policy change and provide funding support to sustain women’s involvement in the agricultural sector. Involving these four groups of stakeholders at the community and institutional levels and building strong relationships among them proved to be essential to the success of the project.

Simply training women on leadership and self-advocacy skills would not have been enough for them to substantially break through the cultural and institutional barriers they faced. They needed advocates in positions of authority. It became evident throughout the project that the more men were involved in the project’s gender sensitivity trainings and introduced to the RMMs’ leadership, the more institutional avenues opened up to women. The GAPP project experience reinforces the lesson that development practitioners hoping to promote gender equality must engage both women and men in their projects and be meticulous in tailoring their activities to address men and women’s gender-specific contexts, constraints, and expectations.

LWR and its partners believe the GAPP project model is ready for scaling up or replicating in other contexts. They created the GAPP Toolkit (https://lwr.org/gapp-toolkit) for practitioners who wish to do just that. The Toolkit details the main components of the approach, provides useful material used during the implementation of GAPP, and offers recommendations derived from the lessons learned during the project.
Interreligious Peacebuilding for Communities: National Peace Council of Sri Lanka’s Reconciling Inter-Ethnic and Inter-Religious Differences Project

Working in inter-ethnic and religious groups in each district has helped local communities deal with continued tensions, while also healing from the violence of the past.

Background

Sri Lanka has a diverse society with ethnic communities, including the Sinhalese (75%), Sri Lanka Tamil (11%) and the Muslim community (10%). More than 8 years after its 26-year war, Sri Lanka continues to be a divided country. An acute mistrust between communities continues.

The project aims to promote district level mechanisms to reduce religious and ethnic tensions through strengthened District Inter-religious Committees (DIRCs). DIRCs include leaders from all faiths in the area, as well as civil society, media, youth groups, women’s organization leaders, and government officials. Project activities with DIRCs included:

- Training for DIRC members, including on non-violent communication, conflict sensitivity, pluralism and diversity, political analysis, early warning and mediation, media documentation, and referrals;
- Establishment of community level communication mechanisms for each DIRC to maintain/update a record of issues;
- Establishment of regular functions for DIRCs to mitigate inter-religious tensions and refer cases to relevant authorities for resolution;
- Building networks between DIRCs and establishment of a National Level Inter Religious Committee (NIRC);
- Conducting provincial level Truth Forums and then National Symposiums to share learning and experience from DIRC Truth Forums;
- Conducting information dissemination campaigns on the UNHRC Resolution and the Truth and Reconciliation Committee (TRC) mechanisms across 9 districts (including distribution of at least 27,000 communication materials).

Faith-Based and Community Initiatives

The project focused on restoring, strengthening, and capacitating the civil society leaders, including religious leaders of DIRCs which were formed in...
nine districts. This included building up horizontal and vertical networks between DIRC and other stakeholders to engage in community-level conflict prevention. Topics discussed in DIRC meetings ranged from the influence of religious and ethnic extremists in harming community relationships, and issues pertaining to ethnic and political rights from different perspectives. Religious leaders representing all faiths showed an increased willingness to advocate towards peace and reconciliation and a desire to invite other religious leaders to join.

Results

DIRCs were active in mitigating community-level inter-religious disharmony. Across the three phases of the project, 105 issues were presented in total, of which 52 were taken on by DIRCs for mitigation. Out of those 52, 79% were resolved by the end of the project, with some interventions ongoing.

DIRCs also held workshops on transitional justice for local level politicians and other community leaders, publicized their efforts through the media, and shared their experiences at the National Symposia organized in each phase of the project. In total, 154 DIRC meetings were conducted in the nine districts.

Some challenges during incidents of inter-religious tensions included the loss of some religious leaders from DIRCs, and a disheartened feeling among some members, especially after they received threats of physical harm. The NPC team worked to build support from other DIRCs and build new membership. Buddhist monks from DIRCs acted as a bridge to discourage threats of physical harms.

Conclusions and Recommendations

DIRCs provided a common platform for leaders of all religions in a community to come together, discuss, and share cultural values in order to improve communication between different groups. Their collective purpose of resolving points of tension unified these groups in their role as peacekeepers within their communities.

In a sign of the National Peace Council’s successful work with DIRCs, the government has validated the formation of government-led inter-religious reconciliation committees in all districts of the country.

As of June 2017, approval has been granted for the establishment of District-Level Reconciliation Committees in all 25 districts.

Similar mechanisms at the Divisional (sub district) secretariat level are recommended as a next step. This would enable even more contact with grassroots efforts. Finally, the establishment of an ‘Inter-Faith Dialogue Center,’ which would function as a resource pool for DIRC members and community members and support them with library, training facilities, and as a meeting place to encourage inter-community and inter-religious cooperation at the district level, is encouraged.
Changing People’s Practices Towards Malaria: Programa Inter-Religioso Contra a Malaria’s project on Social and Behavior Change Communication

Faith leaders and lay members are fully involved members of an inter-religious team that aims to reduce morbidity and mortality from malaria.

Background

Funded since 2007 Programa Inter-Religioso Contra a Malaria (PIRCOM), co-chaired by The Right Rev Dinis Sengulane, Anglican Bishop Emeritus of Libombo (President of PIRCOM), and Sheik Aminudine Mohamad, President of the Islamic Council (Vice-President), and in coordination with the Center for Interfaith Action on Global Poverty, is a unique platform for coordination among Christian, Muslim, Hindu, and Baha’i religious leaders at national and local levels, to equip and mobilize community leaders with information to change attitudes and behaviors about malaria prevention and treatment. This project harnesses the powerful influence of religious leaders towards achieving the U.S. President’s Malaria Initiative (PMI) and the National Malaria Control Program (NMCP) goals to reduce morbidity and mortality due to malaria in Mozambique, particularly among pregnant women and children under five years through behavior change communication activities, and to impact other key health related attitudes and behaviors.

Bishop Dinis Matsolo (PIRCOM Executive Director) says, “If a doctor talks about how important it is for you to have your home sprayed, of course he will talk about those things in those terms, because it is how he will get his salary. But when a leader of a mosque starts talking about health issues, about malaria, then people are ready to listen. [Religious leaders] have got a good audience.”

President of the Republic of Mozambique with religious leaders from PIRCOM in 2012 at the African Leaders Malaria Alliance

Current project activities include training of trainers with faith leaders; training of faith leaders and lay activists to serve as community health volunteers; dissemination of key messages related to malaria prevention and treatment through faith leaders and volunteers at district and community level; use of community radio by faith leaders to strengthen community mobilization for prevention and treatment of malaria; leveraging mass media (national television and radio, public meetings, newspapers) for PIRCOM leadership to advocate and disseminate key messages on malaria prevention.
Faith-Based and Community Initiatives

The project works with members to disseminate messages throughout Mozambique about malaria prevention and treatment opportunities. Religious and community leaders also participate in debates on community radio and other media to promote messages about malaria prevention and treatment. Religious leaders and volunteers also collaborate as community health workers, visiting homes to provide preventative care, some treatment, and referrals to health posts and projects such as home-based spraying campaigns.

The inclusion of religious leaders as the national co-chairs of PIRCOM has also been beneficial. Their position in national discourse has had a large impact on the visibility of the project, the spread of messaging, and connections with national decision makers, such as the Ministry of Health.

Results

PIRCOM has improved the use of mosquito nets to protect pregnant women and children under five and increased adherence to health services for malaria testing and treatment. Religious leaders have shown that they can confidently lead their groups on the topic of malaria. Their self-assurance and use of the local language during facilitation allows greater participation in discussions and understanding of the content covered.

In the first phase of the project, 27,000 local religious leaders were trained in 4 provinces using cascade training methods, and reached an estimated 2 million faith community members with malaria control messages. PIRCOM built upon its success in the first phase by expanding outreach through community radio and other forms of media, which enabled the project to reach more than 3.3 million people as of June 2017.

Conclusions and Recommendations

The prestige of religious leaders in the community has greatly increased the efficacy of this project. Their influence leads to greater compliance among the communities for the messages that they promote on malaria prevention and treatment. Likewise, community health workers are considered key actors in the community as they extend primary health care to local communities, particularly in rural areas. The fact that churches are dispersed across the country, including in some of the most remote regions, has enhanced the access of the project to a wider, and frequently under-served, population. Finally, this project has reinforced collaboration and cooperation between local faith communities, their leaders, and health services at all levels. As crucial local actors, such collaborations are essential for effective health promotion and mutually reinforce these actors’ roles in the community.
Working with Local Faith Actors in Emergencies: Samaritan’s Purse Emergency Response and Economic Recovery for Eastern DRC

Location: Democratic Republic of Congo (DRC)
Scale: 287,997 beneficiaries (between August 2014 – June 2017)
Date: August 2014 – September 2018
Headline Result: By the end of the second year, the majority (56.5%) of households had improved their diet from poor to acceptable.
USAID Contribution: $22.5 million

Local community organizations participate in emergency assistance for conflict-affected people by offering their space and volunteers.

Background

Samaritan’s Purse (SP) Emergency Response and Economic Recovery program, also known as “USAIDizi”, efficiently and rapidly responds to the needs of conflict-affected populations in Eastern Democratic Republic of the Congo (DRC) by improving access to food, enhancing household resilience, and promoting economic recovery. SP DRC met emergency needs, while simultaneously promoting rapid recovery of livelihoods and markets. The project improved food security through increased agricultural production and diversified consumption.

The project utilized a combination of food and non-food item distribution, direct inputs (improved seeds and tools), and agricultural training to help vulnerable households cope with displacement and loss. Trainings covered topics such as improved agricultural techniques, sustainable pest-control practices, and post-harvest crop storage.

Provision of food and non-food items was conducted through a combination of direct distributions and voucher fairs. Items were directly distributed in areas with high levels of insecurity and/or poor infrastructure that resulted in limited market access. Cash-based voucher fairs were utilized in areas with secure, accessible, and integrated markets. Local vendors gathered at fair sites, providing locally preferred produce and non-food items to beneficiaries.

Faith-Based and Community Initiatives

SP sought to include all relevant community leaders in the project in order to ensure implementation was effective and contextual, and gained community buy-in. SP worked closely with village leadership (village chiefs), health facilities, local authorities, schools, and local faith-based organizations. There were nine churches engaged in the project through the use of church leadership within sub-branches in 157 villages. These local faith actors came from a variety of backgrounds, including Protestant, Catholic, Assembly of God, and Indigenous traditions. These faith actors provided the use of their facilities as meeting venues and for indoor beneficiary trainings. They also provided space on
church grounds for conducting distributions or voucher fairs. Churches provided safe, adequate, and convenient assembly points for beneficiaries, who were largely members of the local congregations. Even those beneficiaries with no affiliation to the church felt secure and safe at the venues.

Churches further supported the project by sharing project-mobilization messages to beneficiaries via routine church events. Church leaders, alongside other community leaders, assisted project staff in addressing community complaints during various phases of the project. They also acted as a critical and trusted source of local and regional security information, enabling a safe project environment for beneficiaries.

SP established high standards and practices in order to guarantee there was no religious bias in the involvement of local, faith actors. SP worked with these actors alongside other community leaders and opinion leaders in an open and transparent manner. Since project activities were aimed at vulnerable households, beneficiary targeting was based purely on vulnerability criteria.

Results

Year one activities resulted in the number of households with an “acceptable” diet increasing by 40% and the number of households with a “poor” diet decreasing by 44%. At the end of year two, the majority of households (56.5%) had an “acceptable” diet, as compared to 0% in the “acceptable” range at project inception.

SP gained understanding of the contextual appropriateness, unintended consequences, and necessary adaptations of selected modalities and activities. For example, SP found that using a voucher-fair modality, when deemed appropriate, carried the additional benefits of a quick response time, protection against voucher fraud, improved quality and more predictable quantity of local commodities, well-organized voucher distribution, and enhanced independence and dignity for beneficiaries.

Conclusions and Recommendations

In locations with secure, accessible, and integrated market systems, a cash-based, voucher-fair modality has been found to be highly efficient for distributing food and non-food items to beneficiary households.

This modality was preferred, as it empowers households, and particularly women, to choose and purchase the items they most need.

Local faith-based organizations are an integral component of program success. They have high levels of community influence and can use this influence to spread information about distributions and improved agricultural practices. They are also pivotal in providing space for meetings, voucher fairs, and distributions. It is recommended that strong community ties with local leadership and organizations are developed and maintained. In SP’s case, longevity in the region created a foundation of community trust, facilitating significant local partnerships.
Changing the Course of the Ebola Epidemic: World Hope International’s Preventing Ebola Through Faith and Cultural Leadership Project

Local faith and community leaders supported the Ebola prevention campaign and burial practices to prevent the further spread of Ebola, while respecting their faith and cultural backgrounds.

Background

The project aimed to prevent the spread of Ebola Virus Disease (EVD) and support safe, dignified burials of all persons who died in the 13 chiefdoms of Bombali District. World Hope International (WHI) chaired Bombali District Ebola Response Centre’s Social Mobilization activities to stop the spread of Ebola. The work involved leading a team of 188 social mobilizers to engage in mass media radio discussions and designing and executing social mobilization Ebola prevention and response messages in line with government strategies.

The social mobilization work led to the design and implementation of the innovative Cultural Burial Liaison initiative. The initiative was co-designed by Paramount Chiefs, Sierra Leone’s traditional leaders and cultural societal heads to ensure the sacred (for many) practices of burying the dead honored all involved.

Cultural Burial Liaisons (CBLs) trained ceremonial burial teams to address the problem of unsafe burials and ensure religious and cultural traditions did not have to fall by the wayside to guarantee safe burials. WHI began with community sensitization throughout Bombali District in Sierra Leone, then selected and trained 130 CBLs (one team per chiefdom), to support the District’s Burial Management team at the grassroots level.

CBLs were identified by religious and traditional leaders as persons who would be able to assist with education on and execution of safe burial practices. In addition to supporting safe, dignified, medical burials, and properly utilizing personal protective equipment when performing ceremonial traditions under Burial Management supervision, CBLs were trained to serve as social mobilizers, performing neighborhood watch and reporting any cases of sick persons, alerting the authorities of deaths, and ensuring no secret and/or unsafe burial took place.

Faith-Based and Community Initiatives

WHI spread Ebola prevention messages using person-to-person outreach at numerous events. The religious leaders/cultural liaisons were essential for the promotion of information. Faith leaders...
collaborated to include messages within service times recognizing the importance of ensuring all members of faith bodies knew how to keep themselves and their families as safe as possible.

The practice of burying loved ones is sacred in Sierra Leone. Many associated funerals/burials as farewell ceremonies where traditional heads and family members must be directly involved for the dead to gain eternal life in the afterlife. With the outbreak of Ebola, the act of touching corpses of persons containing the virus was a key contributor to the spread of the disease to family and community members. Through the involvment of traditional heads of cultural societies in the design of a safe burial practice in the era of Ebola, WHI ensured safe, dignified medical burials, with adherence to the Infection Protection Control Standard Operation Procedures for burial, while performing their cultural rites without risk of spreading the EVD infection. This approach enhanced confidence within the population that cultural traditions and safety precautions are not in conflict with each other.

**Winning the trust and confidence of communities played a central role in the rapid control of an outbreak – it saved lives.**

The CBLs interfaced with Islamic, Christian and Traditional faith practices, showing that the particular faith background was less central than the backing of each traditions faith leaders in disseminating life-saving behavior change information.

**Results**

Thirteen Paramount chiefs, 136 section and 958 cultural societal members were engaged in a consultative dialogue which raised their awareness of the importance for safe dignified medical burials within the EVD period. In partnership with 130 CBLs to conduct 330 community engagement Ebola sensitization meetings in all 13 districts, the whole district was able to hear more about preventing Ebola. There were 403,004 (207,233 males; 195,771 females) attendees at Ebola prevention engagement activities, with some individuals participating more than once. In total, 2,193 people were given cultural and faith sensitive burials with help from the project.

**Conclusions and Recommendations**

One of the most important lessons learned through this project is that every member of society needs to be involved to support the eradication of Ebola. WHI found that voluntary behavior change came from 1) providing Sierra Leoneans with the opportunity to understand the behaviors that contribute to the spread of Ebola while offering an alternative course of action, 2) giving them responsibilities to fight the disease in their own group and, most importantly, 3) acknowledging the positive impact traditions may have.

Behavior change also came more easily when prevention messages were brought to communities by their own people. Respecting local hierarchies and involving key personalities of every level of society in the project ensured the communication of Ebola safety messages in every local dialect. CBLs also had a direct link to the community for fast identification of the disease. During community engagement activities, CBLs made many referrals and alerts for those with symptoms of EVD.

Using CBLs was unique to the Ebola outbreak and its resultant impact on safe burials relating to traditional beliefs. After seeing the positive effect of CBLs in Bombali District, this approach was utilized by partner agencies in other districts. One of the most important takeaways from the project is the critical role religious communities can play in supporting life-saving behaviors in emergency settings. In future emergencies, and in health and behavior change programming, mindful incorporation of religious and cultural practices may have life-saving implications.
Working with Local Influencers on Family Planning: World Vision International Integrated Birth Spacing Project

Background

The Integrated Birth Spacing Project was a two and a half year project funded by USAID/PRH Flexible Fund, and implemented by World Vision. The project demonstrated how Healthy Timing and Spacing of Pregnancy (HTSP) messages and Family Planning (FP) services can be integrated into maternal and child health projects at the community level, often with the support of faith leaders.

The project was focused around three integrated strategies: advocacy, community mobilization; and resource mobilization.

1. Advocacy: World Vision staff worked with community influencers to spread HTSP messages.
2. Community Mobilization: messages were spread during community gatherings, such as football games, and volunteers assisted at village Health Huts to provide counseling, pills, condoms, and referrals to the Ministry of Health’s (MOH) Health Posts as needed. Each Health Hut served approximately 1000 people per community.
3. Resource Mobilization: Training of health workers in family planning counseling and services was a main focus. This training was then passed on to community level health workers on counseling and the distribution of condoms and oral contraceptives, which were available through Health Huts. MOH staff provided condoms, pills, and intra-uterine devices (IUDs) at Health Huts for no extra cost to users while nurses trained village health committees on the benefits of HTSP.

Faith-Based and Community Initiatives

In the advocacy component of the project, local influencers including imams, village leaders, grandmothers, fathers, and mothers were engaged to help advocate for and sensitize HTSP messaging among their communities. Through this approach the targeted communities learned that timing and spacing births would lower mortality and became strong supporters of HTSP to improve the health
and wellbeing of infants, mothers, and families in their communities.
As well as the Imams who were involved, World Vision also worked with Catholic sisters at three health posts. These sisters counseled clients on the Lactational Amenorrhea Method, the Standard Days Method, and referred clients to health posts for other methods. Faith leaders are influential and can transform desired community behaviors. There are challenges, but working with faith leaders was a critical success factor in the project.

Results

At the end of the project, 85% of facilities offered three or more family planning methods, 100% of health huts had no stockouts of family planning supplies, and the contraceptive prevalence rate increased to 9-17% (where the national prevalence rate at baseline was 12% with just 7% in rural areas).¹

This project led to the development of the Healthy Timing and Spacing of Pregnancies model, which has expanded to global use by World Vision and other NGOs. HTSP/FP is now being integrated in World Vision’s maternal and child health and nutrition programs in almost 40 countries.

Conclusions and Recommendations

Building constructive relationships with communities helped WV staff to generate a highly positive social environment for HTSP and FP. These strong ties enabled WV to discuss once sensitive issues around FP, openly and engagingly with faith leaders and communities. WV’s focus on faith leader involvement has facilitated this supportive environment. Along with a focus on men in communities, these champions were key in the permeation of HTSP message sharing and in sustaining behavioral change.

Specific recommendations include:
1. Involving faith leaders from the design stage of FP programs as this is pivotal for sustained messaging.
2. Using the health rationale as the basis for FP use to time and space pregnancies for healthy outcomes for mothers and children—health of mothers and children is valued by all.
3. Partnering with the MOH to ensure compliance with national standards and integration with national policies.

Community Leaders as Agents of Change for Child Health: World Relief’s “Tangiraneza/Start Well” Innovation Child Survival Project

By working with a range of community members, from religious leaders to the heads of women’s groups, the Tangiraneza project has improved engaged people to improve health and hygiene for children in their villages.

Background

The “Tangiraneza/Start Well” project aimed to enhance the capacity of Ministry of Health (MOH) staff and Community Health Workers (CHWs) to implement high impact maternal, newborn and child health interventions at the community level.

Project activities included: training MOH staff, CHWs and local leaders in Integrated Care Groups (ICGs) for interventions in nutrition, maternal and newborn care, diarrhea and pneumonia; monthly meetings of CHWs, religious leaders and community representatives to make action plans, coordinate regular home visits, and improve referrals; monthly home visits and community meetings led by ICG members to teach health/nutrition interventions and convey Behavior Change messages; mobilization of churches to assist vulnerable households with kitchen gardens and tippy taps (a handwashing device); implementation of supplementary Nutrition Weeks’ training in the Kaduha catchment area and the Rwandan MOH Community Based Nutrition Protocol (CBNP) in all areas.

There were 536 Integrated Care Groups (ICGs), one in each village; each ICG consisted of 10 members, including three community health workers, the head of the village, a religious leader, three village leaders in charge of social affairs, information and community development, the women’s leader, and a representative of the hygiene club. Each member visited 10 homes on a monthly basis to educate on topics including nutrition, newborn care, diarrhea, and pneumonia, and to follow up.

Faith-Based and Community Initiatives

As an example of the project’s engagement with local leaders, 589 religious leaders, from thirteen church denominations, were involved in total, made up of 536 local religious leaders involved in each ICGs, and 53 senior religious leaders operating across the district.

The inclusion of religious leaders in the ICG was emphasized to create and enhance trust between communities and health systems, and to endorse and triangulate health information during their household visits or at church. The role of religious and community representatives in the ICG was to share health messages with their networks and to help mobilize communities to take positive steps towards

---

1 “Nutrition Weeks” is an innovative practice to prevent (rather than treat) malnutrition with nutrition education messaging, cooking and feeding practice, counseling and follow up home visits.
improving healthy behavior, including building latrines, improving kitchen gardens, etc. Local religious and community leaders were also charged with making plans with their congregations for reinforcing key health messages and implementing three activities or outreaches annually to help the most vulnerable families follow recommended, healthy behaviors. For example, during the rollout of messages on hand washing, community members could be challenged to identify and support families for whom building a tippy tap might be out of reach—with the expectation that assistance be based on need regardless of religious affiliation.

Local leaders also participated in the evaluation functions in the project, regularly reporting the uptake of health and nutrition practices in their communities. They participated directly as enumerators during project evaluations, as well as in mobilization and sensitization of community participants in evaluation activities.

Results

Overall, the probability of achieving the Minimum Acceptable Diet (MAD) was 23% greater when a child had been involved in Nutrition Weeks. Likewise, Minimum Dietary Diversity (MDD) more than doubled in the intervention area from the beginning to the end.

At the end of the project, a survey measured home visits by ICGs and delivery of health messages by churches. In Kaduha, 60% of respondents reported having an ICG member visit in the last month, and 39% reported receiving health information from a church, with respondents in Kigeme reporting 38% and 29%, respectively. With respect to religious groups, the project reported outcomes including an increased number of households reporting CHW, ICG member and church member visits; and that churches were mobilized to assist vulnerable families with kitchen gardens, tippy taps and small livestock.

As one pastor in Mushubi Sector said, “As religious leaders, we should encourage self-reliance on available resources to be able to react quickly to certain health priorities.”

In focus group discussions with the Kigeme and Kaduha Hospital Directors, Nutritionists, and Community Health Supervisors, all affirmed that the informational role of religious leaders was very important as they shared key messages through churches, were trusted in the community and knew the needs of the people.

Conclusions and Recommendations

The Care Group model was originated by World Relief in Mozambique. It has been scaled up in 27 countries by 23 NGOs. The Care Group model is characterized by utilization of volunteers reaching 10-15 neighboring households, delivering behavior change communication and community-based information systems. Cost is approximately $3-$7 per beneficiary per year, and the cost per death averted is $15-$126.

The Care Group model has evolved in Rwanda and has come to a phase of fruition, where community health care initiatives can be tactically integrated within the health system architecture, beyond achievements of short term project goals and objectives. In Rwanda’s complex and dynamic environment, health care organizations need to creatively innovate to ensure a resilient, responsive and catalytic service delivery system to meet the needs and expectations of its people.
USAID remains committed to engaging with faith-based and community organizations to deliver critical humanitarian and development assistance to end poverty and promote resilient, democratic societies. As these case studies amply illustrate, where programs have been well designed and executed effectively, the health, humanitarian and development results have been both positive and sustained. We look forward to expanding our collection of partnership success stories with an ever widening cohort of faith-based and local community entities.
