

COVID-19 – Sub-Saharan Africa

FACT SHEET #5, FISCAL YEAR 2022

June 30, 2022

KEY FIGURES*

8.5

MILLION

Total Number of Confirmed COVID-19 Cases in Region

172,200

Total Number of Deaths Related to COVID-19 in Region

168.3

MILLION

Total USG-donated vaccine doses to the region**

362.5

MILLION

Total Number of Vaccine Doses Administered in Region

Sources:

* Johns Hopkins University and Our World in Data, to date as of June 30, 2022

**U.S. Department of State, as of June 30, 2022.

Figures are subject to change due to periodic adjustment and updating.

KEY MESSAGES

- USAID works in more than 120 countries to fight against COVID-19 by addressing the social and economic effects of the pandemic, mitigating its wide-ranging impacts, and supporting recovery from COVID-19. USAID works with partner governments, multilateral institutions, non-governmental organizations, other donors, and civil society to deliver and distribute vaccines, protect and train health workers, disseminate key public health information, provide emergency food and critical humanitarian services and supplies, provide continuity of basic services, provide social and economic support, and sustain education for millions of students. Guided by the [United States COVID-19 Global Response and Recovery Framework](#), [USAID's response](#) is helping to meet the targets introduced by the September 2021 Global COVID-19 Summit convened by President Biden.
- The White House supports the World Health Organization's goal of vaccinating 70 percent of the global population and pledged that the U.S. will be the world's vaccine arsenal. USAID plays a pivotal role in U.S. contributions to this goal. USAID is advancing the President's commitment to make 1.2 billion U.S.-made doses available for donation to low- and lower-middle-income countries. USAID will also continue to provide financial and technical assistance to deliver and administer vaccines in more than 110 countries through the U.S. Government's Initiative for Global Vaccine Access (Global VAX). Global VAX is a whole-of-government effort, through which the United States has already committed more than \$1.7 billion to support vaccine readiness work. Global VAX includes a wide range of activities to help turn vaccines in vials into vaccinations in arms including investing in cold chain and supply logistics, building mobile vaccination sites, assisting with strategic planning to deploy more health care workers and resources, fighting misinformation and disinformation to increase vaccine confidence and demand, training clinical and non-clinical personnel, and developing health information systems to ensure that vaccines are distributed equitably and safely. In sub-Saharan Africa (SSA), Global Vax is surging vaccine delivery support to 11 surge countries: Angola, Côte d'Ivoire, Eswatini, Ghana, Lesotho, Nigeria, Senegal, South Africa, Tanzania, Uganda, and Zambia.
- Across SSA,¹ USAID is contributing to vaccination by establishing vaccination sites, developing vaccination plans, and leading communication campaigns. Additionally, USAID and its partners are working to strengthen healthcare systems and respond to acute needs by supporting programs that address both first- and second-order effects of the pandemic.

TOTAL USAID FUNDING FOR THE COVID 19 RESPONSE IN AFRICA

USAID Bureau for Africa	\$657,786,827
USAID Bureau for Humanitarian Assistance (BHA)	\$1,259,183,753
USAID Bureau for Global Health (GH)	\$242,153,446
	\$2,159,124,026

¹The SSA region includes Angola, Benin, Botswana, Burkina Faso, Burundi, Cabo Verde, Cameroon, Central African Republic (CAR), Chad, Comoros, Côte d'Ivoire, the Democratic Republic of the Congo (DRC), Djibouti, Equatorial Guinea, Eswatini, Ethiopia, Gabon, The Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Namibia, Niger, Nigeria, the Republic of the Congo (RoC), Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, South Sudan, Sudan, Tanzania, Togo, Uganda, Zambia, and Zimbabwe.

²The figures represent obligations of the American Rescue Plan Act of 2021; the 2020 Coronavirus Preparedness Act; the 2020 CARES Act; and prior year funding completed by June 30, 2022. They do not include redirections, nor do they include base funds that were used to respond to COVID-19. Amounts may include HIV/AIDS funds appropriated to the Department of State and allowed to USAID.

KEY DEVELOPMENTS

- During April 2022, COVID-19 cases, incidence of severe illness, and deaths remained low across SSA. Beginning in May 2022, several countries in SSA experienced an increase in cases stemming from Omicron lineages BA.4 and BA.5. This wave yielded fewer cases and deaths than previous Omicron and Delta waves. By June 30, 2022 cases had largely peaked and were declining across the continent, though some countries were still experiencing increases. South Africa has continued to report the highest number of COVID-19 cases and the greatest number of deaths in SSA, though the true impact of the pandemic on many countries is not fully represented in epidemiological data due to testing blindspots and limitations in surveillance systems. Recently published WHO estimates of excess mortality due to COVID-19 and a growing body of evidence on seroprevalence have shown that both case numbers and deaths from COVID-19 are far greater than official figures suggest.
- COVID-19 vaccination rates in SSA have continued to increase, with roughly 17 percent of the population in SSA having completed the primary vaccine series and an additional 5 percent partially vaccinated. As vaccination rates have increased, countries have begun offering vaccinations to those populations under the age of 18 years old, and several countries have also made booster doses available. Though COVID-19 vaccines have been widely available over the past few months, with doses delivered in large numbers and with longer shelf lives, many countries in SSA are still experiencing low vaccine demand, due to conflict and other challenges that hinder uptake of COVID-19 vaccinations.

USAID RESPONSE HIGHLIGHTS

FACILITATE ACCESS TO SAFE AND EFFECTIVE COVID-19 VACCINATIONS

- As of June 30, 2022, the U.S. government had delivered more than 168 million doses of COVID-19 vaccines to 44 countries in SSA.
- With USAID assistance, Global VAX surge countries have made significant progress since the initiative was announced in December 2021. At the beginning of 2022, only four of the 11 surge countries had COVID-19 vaccination coverage (completed primary series) of over 10 percent. By June 30, 2022, seven countries had surpassed 20 percent coverage.
- In Angola, the U.S. government enhances vaccination efforts through ultra cold chain strengthening, logistics for vaccination sites, social media campaigns, community engagement and vaccine donations. As of June 20, 69 percent of the eligible population had at least one vaccine dose with over 13 million people having received their first dose, 7.1 million people receiving their second dose, and another 722,127 receiving a booster dose. The U.S. government is the largest donor of COVID-19 vaccines in Angola, providing nearly 9.5 million doses of Pfizer and Johnson & Johnson vaccines.
- USAID has strongly supported efforts to reach people with factual information about COVID-19 vaccines through mass media channels and engaging with communities. In Madagascar, USAID has funded messaging on COVID-19 vaccination on TV, radio, social media, SMS, mobile sound systems, financed public speeches, and has even installed stickers on taxis and tuk-tuks. Close engagement with local leaders from many groups, including religious organizations has helped spread information on vaccination and has countered misinformation around vaccines.
- USAID has been able to achieve success with campaigns in several countries in SSA, including in the Banaadir region of Somalia. Somalia received its first donation of Pfizer COVID-19 vaccines from the United States Government in March 2022 following the installation of ultra-cold chain freezers. In May, health workers completed training on handling and administration of the Pfizer COVID-19 vaccine. To facilitate uptake of COVID-19 vaccines, USAID partnered with UNICEF to counter misinformation related to the introduction of multiple vaccine types and respond to questions from the population about the two-dose regimen required for the Pfizer vaccine. Approximately 95 percent of Pfizer COVID-19 vaccines in Banaadir had been administered by mid-May, demonstrating that even in challenging environments high vaccine uptake can be achieved.
- Mozambique has seen remarkable progress in its COVID-19 vaccination efforts. Over 14 million adults—more than 90 percent of the population aged 18 and older—have completed the primary series of COVID-19 vaccination. Through U.S.

government contributions via COVAX and the African Vaccine Acquisition Trust, Mozambique has received 4,503,900 safe and effective J&J vaccine doses. Recently, USAID played a vital role in increasing vaccination rates in the province of Tete. Tete had low vaccination rates and was in danger of losing vaccines that were expiring at the end of June. USAID assisted with transportation for vaccinators and supervisors and enabled increased outreach. As a result, the province completed an accelerated vaccination campaign that vaccinated more people in three weeks than were previously vaccinated in an entire year. The province has now reached 90 percent of its vaccination target.

REDUCE MORBIDITY, MITIGATE TRANSMISSION, AND STRENGTHEN HEALTHCARE SYSTEMS

- USAID is enabling case management and infection control in several countries across SSA. In Lesotho, USAID funded the engagement, orientation, and training of additional doctors, treatment center nurses, and wardens during the first Omicron wave. Local nurses were deployed to all 10 districts for case management activities with supportive supervision in treatment centers to strengthen patient monitoring, high flow nasal oxygen, and comorbidity management.
- USAID is also strengthening local health systems by building the capacity of health care workers and partner governments. In South Sudan, USAID and its partners are strengthening community health coordination and providing training for local health care workers in infection prevention and control methods. In Ethiopia, USAID and its partners helped the Ministry of Health to improve its response capacities on COVID-19 in risk communication, case management, and health services for infection control and prevention, reaching nearly 90,000 people.
- Across SSA, USAID is building improved risk communication and prevention systems, sharing information on disease prevention and control and providing essential commodities. In Ethiopia, USAID and its partners disseminated hygiene messaging and supplies and established hand-washing facilities. Together, these efforts reached more than 130,000 people. In April, USAID and its partners in South Sudan conducted 33 health education sessions for more than 4,000 beneficiaries and caretakers at feeding centers, and also conducted 217 education sessions with community health promoters covering COVID-19 detection and prevention. In May, USAID and its partners also conducted 45 COVID-19 awareness campaigns in West Darfur and around the Geneina locality for almost 6,000 beneficiaries. USAID and partners also led three radio dialogue sessions disseminating COVID-19 messaging that reached up to 2,000 beneficiaries.
- USAID and its partners continue to provide lifesaving oxygen to those in need, while also strengthening oxygen delivery systems. Between April and June 2022, USAID and its partners spent eight-weeks evaluating market shaping opportunities to increase access to liquid oxygen (LOX) in nine countries in eastern and southern Africa. LOX, a gold standard of oxygen in high income countries, is an underutilized oxygen supply modality in low- and low-middle-income countries and 75 percent of severe COVID-19 patients can survive if they have access to oxygen therapy. Through this evaluation, USAID is helping to identify activities that could address the underlying challenges that lead to market inefficiencies and fragmented availability of LOX to help save lives.
- USAID continues to mitigate the effects of the COVID-19 pandemic on PEPFAR programs. To provide continuity of treatment for people living with HIV, USAID has procured additional stocks of antiretrovirals (ARVs), delivered more ARV doses at a time, adopted telehealth, and improved client tracking. USAID has also built up supply chain management systems that had been strained by the COVID-19 pandemic and improved monitoring capabilities by strengthening laboratory systems. USAID has increased both community index testing and HIV self-testing capabilities, and expanded activities to respond to gender-based violence with a focus on identifying, supporting, and referring clients to care and treatment services.

ADDRESS ACUTE NEEDS DRIVEN BY COVID-19

- The COVID-19 pandemic has illuminated and exacerbated critical humanitarian needs across the globe, particularly in fragile and low-income countries. USAID has sought to address urgent needs related to and spurred by the pandemic. In Sudan, which, at 7 percent, has one of the highest COVID-19 mortality rates in the world, USAID has improved COVID-19 screening, treatment referrals, and logistics, and provided assistance with training expenses for vaccinators and with prevention services to populations with an elevated risk of complications related to COVID-19.
- Shocks caused by the pandemic have resulted in overlapping and devastating effects, including the loss of jobs and livelihoods, exacerbating poverty and vulnerability. USAID continues to respond to the immediate needs of affected

populations, while building systematic resilience to withstand future shocks. In Ethiopia, USAID is helping with the disbursement of cash transfers to high priority households severely affected by the COVID-19 pandemic. Approximately 27,000 COVID-19 affected households are now receiving monthly cash transfers. These households include older persons, homeless persons, persons with disabilities, chronically ill persons, households with malnutrition cases, female-headed households, and households with large numbers of children.

- COVID-19 has affected livelihood opportunities and household incomes across SSA—exacerbating food insecurity and hindering access to and availability of diverse and nutritious foods. These food security challenges include rising prices and reduced access to and disrupted supply chains due to the COVID-19 pandemic, which have been exacerbated by the conflict in Ukraine and drought in much of eastern Africa. In Chad, one of the world’s most food-insecure countries, low public awareness of COVID-19 risks combined with limited income-generating opportunities have triggered increased emergency food needs. USAID continues to partner with the World Food Program to distribute unconditional food aid and provide specialized nutritious foods to beneficiaries.

BOLSTER ECONOMIES AND OTHER CRITICAL SYSTEMS

- USAID continues to improve partner country responses to the economic impacts of the pandemic. In Djibouti, Cape Verde, and South Sudan, USAID is helping to overcome the economic impacts of the pandemic shock by providing resources to strengthen small businesses. In South Sudan, USAID and its partners have targeted small enterprises like breadmaking in Ulang, soapmaking in Kajo-Keji, and sanitary pad making in Budi. Partners have also conducted training on basic business management and bookkeeping, and have worked with Savings and Internal Lending Communities to increase access to credit and markets to increase income-generating activities.
- To address the destabilizing effects of the COVID-19 pandemic on the democratic process, USAID has provided assistance to civil society organizations across SSA. In Benin, Guinea, and Togo, USAID has enabled local civil society organizations to prevent and mitigate conflict by developing platforms for dialogue, strengthening social cohesion, monitoring and countering misinformation and hate speech, and engaging youth and women as peace mobilizers. USAID and its partners have directly engaged local communities and addressed the impact of the COVID-19 pandemic through early warning and response mechanisms, cross-communal dialogues, education and awareness-raising, and the distribution of personal protective equipment in select communities.

USAID FUNDING FOR THE SSA COVID-19 RESPONSE ³

BUREAU	PARTNERS	AMOUNT
Angola		
USAID/AFR	ADPP Angola, Chemonics, Development Workshop Angola, International Business and Technical Consultants Inc. (IBTCI), Mothers2Mothers South Africa (M2M SA), Population Services International (PSI), World Health Organization (WHO), World Vision	\$29,810,000

USAID FUNDING FOR COVID-19 RESPONSE IN ZIMBABWE		\$52,423,976
TOTAL USAID FUNDING FOR THE SSA COVID-19 RESPONSE⁵		\$2,159,124,026

³ The figures represent obligations of the American Rescue Plan Act of 2021; the 2020 Coronavirus Preparedness Act; the 2020 CARES Act; and prior year funding completed by June 30, 2022. They do not include redirections, nor do they include base funds that were used to respond to COVID-19. Amounts may include HIV/AIDS funds appropriated to the Department of State and allowed to USAID. The total does not include the more than \$7.3 billion in USAID assistance for global COVID-19 response operations, including U.S. government assistance to GAVI/COVAX.

⁴ UNICEF support under the West Africa Regional was provided to Equatorial Guinea, Gabon, Sao Tome and Principe, and Togo.

⁵ This total does not include funding for USAID operating expenses (OE). Of the \$95 million in CARES Act appropriated for COVID-19-related OE, approximately \$66 million had been obligated as of June 30, 2022. In addition, USAID transferred \$7 million in ESF-COVID-19 funding (Coronavirus Preparedness and Response Supplemental Appropriations Act) to the USAID OE Account, of which \$6.9 million is obligated to date. Of the \$41 million appropriated in ARPA OE, USAID has obligated \$19.8 million.

ADDITIONAL INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to organizations that are conducting relief operations. USAID encourages cash donations because they allow aid professionals to procure the exact items needed; can be transferred quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietarily, and environmentally appropriate assistance. More information can be found at USAID Center for International Disaster Information: www.cididi.org.
- USAID has established an inbox (covid-pse@usaid.gov) to coordinate private sector engagement around the COVID-19 response. In addition, the UN supports an initiative for businesses seeking to donate money, goods or services. Please visit connectingbusiness.org for more information.
- Finally, USAID reminds the public that it may accept unsolicited applications and proposals. The Agency has set up a COVID-19 Concepts portal at: <https://www.usaid.gov/coronavirus/funding-requests-unsolicited-proposal>
