

# DEMOCRATIC REPUBLIC OF THE CONGO

## PREVENTING CHILD AND MATERNAL DEATHS

2024

USAID envisions a world where all women, newborns, and children survive, are healthy, and are able to develop and reach their full potential, contributing to the development of their communities and countries.

OVER THE LAST 20 YEARS,  
MORTALITY HAS FALLEN IN  
THE DEMOCRATIC REPUBLIC  
OF THE CONGO BY:

↓ **31%** **NEWBORN**  
mortality rate

↓ **51%** **CHILD**  
mortality rate

↓ **18%** **MATERNAL**  
mortality ratio

Source: Interagency Group for Child Mortality Estimation (IGME) and United Nations Maternal Mortality Estimation Inter-agency Group (MMEIG).

Total Population (2022):  
**99 MILLION PEOPLE**

Total Fertility Rate (2022):  
**6.1 BIRTHS PER WOMAN**

FISCAL YEAR 2022 USAID BUDGET ALLOCATION  
TO PREVENT CHILD AND MATERNAL DEATHS:

**US \$117.5 MILLION**

- Maternal and Child Health - **30%**
- Family Planning and Reproductive Health - **17%**
- Malaria - **46%**
- Nutrition - **7%**

### MORTALITY PROGRESS AND PROJECTIONS

# USAID DELIVERS ESSENTIAL, LIFESAVING CARE FOR CHILDREN AND WOMEN

In the Democratic Republic of the Congo (DRC) in 2022, USAID:

 Provided **1.4 million couple-years of protection** through voluntary family planning programs.

 Supported **1.6 million newborns** with postnatal care within two days of birth.

 Reached **3.7 million children under age five** with nutrition programs.

 Helped **482,000 people** gain access to basic drinking water services.

 Delivered **1.6 million insecticide-treated mosquito nets**.

 Helped **1.5 million women** to give birth in facilities receiving U.S. government support.

## IN THE DRC, 38% OF ALL DEATHS ARE PREVENTABLE CHILD AND MATERNAL DEATHS

USAID is working with our partners to reduce preventable child and maternal deaths to **12% of total deaths, or lower**, across priority countries by 2030.

Source: United Nations World Population Prospects 2022.

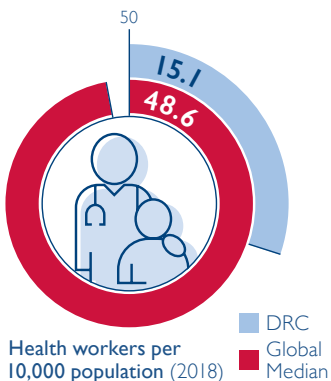

**COVERAGE:** Expanding coverage of lifesaving interventions is essential to save more lives.

The Democratic Republic of the Congo (DRC) measures at 43 on the Reproductive, Maternal, Neonatal, and Child Health service coverage sub-index from WHO (2021). This sub-index captures priority interventions proven to reduce mortality among mothers, newborns, or children, such as the demand for family planning satisfied with modern methods of family planning and proportion of infants who received DTP3 vaccination by one year of age. Interventions included in the sub-index are considered feasible for universal implementation in low-income countries. USAID is working with our partners to reach an average measure of 68 on the sub-index across our priority countries by 2030.

 **33%** Demand for family planning satisfied with modern methods (2018)

 **45%** DTP3 immunization at age one year (2017)

**QUALITY:** Increasing the number of healthcare workers can improve the quality of healthcare services.

The number of health workers in the DRC falls below the global median of 48.6 health workers per 10,000 people. This shortage of health workers limits the country's ability to reach its growing population with essential health care services. Sustained improvements in maternal and child survival require increasing the quantity and equitable distribution of health workers with the critical skills needed to provide quality, respectful care

**EQUITY:** Reducing inequity in healthcare can help reach more women and children.

Many families in the DRC do not have equitable access to health services, as illustrated by the income disparity in skilled attendance at birth. Beyond income inequality, social determinants including residence, ethnic or religious group, age, or disability can also lead to inequities in use of health services and in health outcomes. To increase child and maternal survival, there must be a concerted focus on interventions and strategies that reach poor, marginalized, or vulnerable women and children.
