

USAID's \$1.1 billion Investment in Global Health Security Since 2009 and Countries with COVID-19

Training Health and Veterinary Workers and Engaging Communities

Strengthened capacity of multi-sectoral workforce and communities in Africa and Southeast Asia to prevent, detect, and quickly respond to disease threats using a "One-Health" approach across human, animal, and environment sectors.

Zoonotic Disease

Improve laboratory systems, surveillance, biosafety, and other practices to address the threat of priority endemic, emerging, and reemerging zoonotic diseases.

Viral Discovery

Improved detection and characterization of zoonotic pathogens and infectious disease events.

Responding to Outbreaks and Combating Antimicrobial Resistance

Preventing, detecting, and responding to infectious diseases and antimicrobial resistance through a "One-Health" approach.
