POWER AFRICA OFF-GRID PROJECT (PAOP)
Côte d’Ivoire

In Côte d’Ivoire, off-grid is an emerging market in the country’s energy sector with limited access to financing, development, and the lack of adequate strategic and regulatory action to stimulate private sector investment. Even though smaller segments of the sector—such as the solar home system (SHS) market—carry significant potential for growth, there are a variety of challenges. Zero operation of private mini-grid companies, limited access to local currency for international and local companies, and out-of-date market information and intelligence, must be addressed by the Government of Côte d’Ivoire for the market to realize its fullest potential.

PAOP ENGAGEMENT IN CÔTE D’IVOIRE

Policy and Regulatory Engagement. PAOP works to improve the regulatory and policy structures that currently inhibit growth of the off-grid market in Côte d’Ivoire. To begin the process, PAOP is helping the government of Côte d’Ivoire undertake consultations with development partners about renewable energy policy, off-grid strategy, and mini-grid regulations. The team also promotes the role of private sector off-grid companies in helping to reach universal access to electricity. By the end of the program, PAOP expects key stakeholders to adopt a set of guidelines for minimum performance standards for SHS. Team advisors will serve as a liaison between the government and the stakeholders to ensure this goal is met.

Assessing Market Dynamics and Providing Intelligence. To inform future activities, PAOP’s off-grid market assessment in Côte d’Ivoire maps ongoing and upcoming donor activities, existing market intelligence resources and services, market potential, regulatory environment and financial landscape. On an ongoing basis, PAOP will provide valuable insights to investors, companies, and donors to inform and assist with the development of partnerships within the sector, including between U.S. businesses and local distributors and clients.

Increasing Business Performance and Access to Finance. PAOP engages in numerous activities to boost business performance and access to finance for off-grid companies in Côte d’Ivoire. The team provides ongoing operational support to off-grid companies in an effort to improve their performance, as well as business advisory services and capacity building as needed. Other activities include introducing interested off-grid companies to potential financiers and strengthening collaboration between off-grid stakeholders and international development partners.

Expanding Cross-Sectoral Integration. To support the growth of energy-agriculture projects and products in Côte d’Ivoire, PAOP focuses on helping off-grid companies develop productive use applications of their products and collaborating with relevant USAID projects and partners.
Activities will explore various types of agricultural solutions in areas such as the use of solar pumping in banana plantations.
The USAID-funded Power Africa Off-grid Project (PAOP) provides technical assistance and targeted grant funding to support the development of Africa's off-grid SHS and mini-grid sectors. Through a team of resident technical advisors across East and West Africa, PAOP works with companies, investors, and governments to advance the role of the private sector in extending energy access while integrating gender considerations into all its work streams.

By offering broad-based market intelligence to investors/financiers to inform financial product design, advising governments on establishing supportive policy frameworks, and providing hands-on support to companies, PAOP is helping to build the off-grid market to accelerate private sector-led energy access. Specific focus areas:

- **Policy and Regulatory.** Enabling environment activities increase the ease of doing business and attract private sector partners to participate in the off-grid sector. PAOP supports the mini-grid and SHS sectors, as each of these sectors faces a different set of policy challenges. PAOP helps governments design and implement policy frameworks that are supportive of private sector off-grid solutions.
- **Market Intelligence.** To serve the off-grid sector more broadly, PAOP gathers and disseminates market intelligence to companies, investors and governments to inform them about the latest sector developments and support their making informed decisions.
- **Business Performance.** PAOP offers targeted interventions meant to improve sales and business performance of individual companies, providing deep operational support in areas such as C-suite recruiting, business model development, sales strategy, product sourcing and strategic partnerships. In every country, PAOP works to raise awareness of pay-as-you-go (PAYGO) models among microfinance institutions in addition to supporting other existing business models.
- **Access to Finance.** Off-grid companies require consistent access to financing. PAOP works with companies to raise equity or debt through executive coaching and pitch deck development, as well as supporting successful grant applications. The team also works directly with local financial institutions and investors to develop bankable pipelines and perform due diligence.
- **Cross-Sectoral Integration.** The links between energy and other sectors such as agriculture, health, and education, represent key opportunities for off-grid companies to reach new markets, develop new product lines, and multiply their impact. PAOP’s Regional Advisors in both East and West Africa support companies and USAID missions to understand and execute opportunities for the integration of productive uses of energy into their businesses and activities.

**ABOUT PAOP**

Started in November 2018, the Power Africa Off-grid Project (PAOP) is a four-year program to accelerate off-grid electrification across sub-Saharan Africa to support Power Africa’s goals to double access. RTI International implements PAOP in collaboration with Fraym, Norton Rose Fulbright, Practical Action Consulting, and Tetra Tech.
About Power Africa

Power Africa is comprised of 12 U.S. Government agencies, over 145 private companies, and 18 bilateral and multilateral development partners to support sub-Saharan governments by working together to increase the number of people with access to power. Power Africa’s goal is to achieve 30,000 MW of new generated power and 60 million new connections by 2030 to reach 300 million Africans.
