Vulnerable to Manipulation
Interviews with Migrant Youth and Youth Remittance-Recipients in Kyrgyzstan
MAY 2016
Executive Summary

Research conducted by Mercy Corps and Foundation for Tolerance International (FTI) in Kyrgyzstan reveals a number of risk factors related to violence that exist within the studied youth population of southern Kyrgyzstan. This research was conducted between March and May 2016 in the southern provinces of Osh, Jalalabad, Batken, and in the northern province of Issyk-Kul. In 2010, southern Kyrgyzstan saw an outbreak of violence between ethnic Kyrgyz and ethnic Uzbek citizens. Known locally as the Osh Events, this violence resulted in mass casualties, displacement and destruction of physical infrastructure in the South. In addition, southern Kyrgyzstan is a known origin of people migrating to Syria to join Jabhat al-Nusra or the so-called Islamic State, with official figures citing fewer than 500 people from Kyrgyzstan. While this research did not specifically seek out people who migrated to join the fight in the Middle East, some respondents were directly aware of neighbors, friends, acquaintances or people from their communities who had gone. Issyk-Kul was selected as a comparator province for this study due to its multi-ethnic composition and lack of conflict history.

Kyrgyzstan is characterized by a young, rapidly expanding population, high levels of rural poverty, insufficient domestic jobs for working-age people, and a high dependence on Russia as a source of remittances. The precipitous reduction in remittances from Russia due to contractions in the Russian economy in the last two years and changes in the ruble/som exchange rate have spurred questions about the population’s vulnerability to destabilization or recruitment to jihadi organizations.

Researchers interviewed 159 people in these four provinces of Kyrgyzstan, including migrant youth, remittance-receiving youth, and key informants drawn from the communities. Perceptions, regardless of accuracy, create a reality for the people who hold those views. This paper does not seek to comment on the truth or falsehood of those perceptions. Rather, this research hopes to shed light on the consistency of themes of note. Vulnerabilities to manipulation appear to exist in the three southern provinces studied—Osh, Jalalabad, and Batken—as well as Issyk-Kul in the North. However, the frequency and texture of interview responses supports the view that there is enhanced risk among youth populations from the southern provinces. Additionally, the extent of combined factors would seem to indicate that while there are some differing risk factors confronting ethnic minorities and the ethnic majority in the South, both warrant attention.

Key Findings:

Violence and recruitment to violent groups are neither inevitable nor predictable based on our findings. While southern Kyrgyzstan has a history of communal violence and is the origin of some people who have become involved in the conflict in Syria and Iraq, the interview responses in this research provide no clear indication that there is either an imminent risk of future violence or expansion of recruitment to violent extremist organizations among these youth. However, a number of common themes of frustration, anger and animosity across migrant and remittance-receiving youth raise concern of the potential for manipulation toward violence. Of particular note is the identification of themes through this research that align with the recruitment messages used by violent extremist organizations (VEOs) in Syria and Iraq and consistent with findings from Mercy Corps’ multi-country research into youth attraction to violence, particularly related to corruption, inequality and injustice. Though it

---

1 https://iwpr.net/global-voices/kyrgyzstan-return-from-syria; http://www.rferl.org/content/islamic-state-kyrgyzstan-fighters/26969666.html
is unlikely that any single risk factor in isolation is sufficient to cause devolution into violence or recruitment into violent jihadi organizations, the combination of any of the identified factors suggests the potential for youth to be successfully manipulated by those seeking political, economic or ideological gain within Kyrgyzstan and beyond its borders. Based on our data, we have no reason to believe, however, that there is greater risk of jihadi violence versus political or pre-electoral violence versus inter-communal violence. If manipulation towards violence does occur, any and all of these levers could be pulled in stages or simultaneously.

The purpose of this type of research is to provide policy makers and key stakeholders timely analysis so that evidence-based interventions can be made to prevent vulnerabilities from manifesting into crises or further attraction to violent extremist agendas. Five specific themes emerged in the course of the research that illuminate the conditions that place youth in Kyrgyzstan at risk of manipulation towards violence:

- **Divisions between majority and minority ethnicities are evident and fraught.** A substantial number of respondents identified animosities or distrust towards another ethnic group in Kyrgyzstan, exacerbated by physical and social separation of ethnicities. While southern Kyrgyzstan has long had both homogeneous and heterogeneous communities, our conversations indicated that there are increasingly fewer places where the ethnicities meet: Often ethnic Uzbeks are pursuing education in Uzbek schools; ethnic Kyrgyz and ethnic Uzbeks frequently worship in different mosques; private sector employment, when available domestically, is only accessible through family and acquaintance networks, often ethnically-based. In addition and related is the social separation that occurs with circles of friends, family and acquaintances. Critical and derogatory comments were directed in both directions between ethnic minority youth and majority youth. Further, approximately one-quarter of ethnic minorities interviewed described perceptions or experiences of exclusion and injustice related to ethnicity, including a belief in inequitable application of laws. A notable portion of ethnic majority Kyrgyz in this study articulated sentiments that demonstrated concern of threats to their national identity and culture from ethnic minorities.

The separation between ethnic groups is, in part, exacerbated by language differences. In an apparent effort to redress this issue, Kyrgyzstan has taken the step of requiring Kyrgyz language proficiency for entry into university or for entry into state jobs. While the long-term hope is undoubtedly for linguistic integration to facilitate greater national harmony and identity, the short-term result, voiced by young people we spoke with, is exclusion of ethnic minorities in higher education or into the few steady salaried jobs that exist in southern Kyrgyzstan.

- **Fault lines are emerging along differing patterns of religious expression and perceived piety.** Religiosity is broadly perceived to be on the rise among young people across ethnicities. However, perceptions of differences in piety expressed by respondents shows that there are fault lines emerging on two fronts. The first is along ethnic divisions, particularly between ethnic Uzbeks and ethnic Kyrgyz, where differences in behavior and dress are creating visible separations and voiced animosities. A number of youth interviewed equated more conservative religious appearance and behavior *a priori* with extremism. This type of association risks further dividing youth across religiosity, marginalizing more conservative groups, which could ultimately lead to a self-fulfilling prophecy. Simultaneously, the narrative, conveyed initially by

---

Youth and Consequences: Unemployment, Injustice and Violence, Mercy Corps, 2015:  
the Kyrgyz government, that the majority of those from Kyrgyzstan who have joined Islamic State are of Uzbek ethnicity, seems to be embedding itself in public perception.³

Regardless of accuracy, the perception that a specific minority ethnic group is dressing differently, displaying differing religious behaviors, and is demonstrating attraction to extremist violence abroad and potentially back in Kyrgyzstan risks creating identification of this group as deviant and a threat. An actual or perceived affinity for participation in violent extremism due to ethnicity can further exacerbate ethnic tensions, harden ethnic identity, and risk destabilizing communities, particularly if targeting on the basis of identity is allowed to occur.

The second front exists between the practice of traditional cultural Islam and more conservative Islam. The perceived disproportionate number of madrassahs compared with public schools; the appearance of wandering daavatchi missionary preachers; the avoidance of cultural celebrations like Nooruz; and wearing Middle Eastern or South Asian attire is an affront to those who see Central Asia’s syncretic form of Islam as part of the national culture and heritage. For many youth, particularly among ethnic Kyrgyz, Islam seems to play more of a cultural role in their identity than a religious role. Globally, Salafi jihadi groups have demonstrated that exploiting divides between true believers and apostates is fertile ground for strategic gains.⁴ Most commonly, this division is realized along the Sunni and Shia divide (e.g., Iraq, Syria, Yemen) or along the Salafi and Sufi divide (e.g., West Africa, Horn of Africa), with Shia and Sufis both being depicted as apostates.⁵ The growing divide between visibly conservative Muslims and less overtly observant Muslims has the potential to be exploited in Kyrgyzstan, particularly with the overlay of ethnicity.

- **Lack of confidence in democratic processes and government is eroding the credibility of state.** The concept of a unified pluralistic state appears to be deeply fractured among a notable portion of the youth interviewed in this research. The lack of confidence in elected officials to productively engage with the people and to equitably govern is a strong theme across youth in all geographic regions and includes perceptions from both migrants and remittance-recipients. And while there were some noted differences in issues of equity and justice across ethnic groups as mentioned above, criticism of elected officials and state entities to satisfactorily serve the people was evident in voices across ethnicities and regions. There is strong articulation and indignation by respondents of perceived systemic corruption across various levels of government and service deliverers, including schools and hospitals. With many youth from this research not having voted in the most recent parliamentary elections and other youth stating that they willingly accepted money to vote a certain way, legitimacy of the electoral process in the eyes of many of these youth is low.

The lack of legitimacy of state actors and processes undermines the integrity of the state as a whole and serves to create a fragmented national landscape. Further, Kyrgyzstan lacks a conceptual construct of what it means to be a Kyrgyzstan national. There does not appear to be a compelling or internalized narrative to convey a uniform sense of national pride across ethnic groups, religious adherents, or northerners and

⁴ Salafi Jihadist groups emphasize that it is essential to return to the Islam as practiced by the Salaf (ancestors); and that defense of Islam through jihad is a duty. Promotion of the use of sharia under territories of control are a common feature. For a more detailed discussion on Salafi-Jihadi organizations, see: Jones, S.G. (2014), *A Persistent Threat: Evolution of al Qa’ida and other Salafi Jihadists*, Rand National Defense Research Institute.

southerners participating in this research. In pluralistic societies, the role of and confidence in the function of state is essential to realize national cohesion. In absence of a unifying identity through trust and confidence in shared citizenship in the State, there is a potential that alternate identities will emerge to supersede or supplant the concept of State.

- **Youth are frustrated by unmet economic expectations and the pressure to migrate.**

  In spite of the deep economic crisis in Russia, young people continue to migrate abroad for work, recognizing that job availability and incomes are higher outside the borders of Kyrgyzstan. While work is still available in Russia, it is less predictable and less regular than previously. The net result is that many economic migrants are realizing decreased income while abroad. Frequently working multiple jobs as unskilled labor, young people described the recent difficulties to make ends meet abroad. Decreased incomes are causing migrants to send fewer remittances back home. Compounding this challenge is the substantial drop in exchange rate between the Russian ruble and the Kyrgyz som, resulting in a negative change in the value of those remittances. Young people described dissatisfaction with sudden and profound decreases in disposable income and living standards and the inability to find adequately-paying work at home. Further, some respondents described a “lost generation,” with concerns that the skill level and education level of an entire generation is decreasing. Some young people are recognizing that if education does not equate with higher earning potential, then there is no logic in remaining in school.

  The concerning aspect for stability, however, is not likely the result of dire absolute poverty from these remittance reductions, though that undoubtedly exists in southern Kyrgyzstan. The real issue revealed in conversations with youth and key informants alike is the experience of relative deprivation that seems to be pervading all corners of the southern population. People may be better off today than they were in the 1990s, but these young people have keen awareness that they are far worse off today than they were just two years ago. It is the unmet expectation of purchasing power, quality of life and growth that is a source of economic frustration revealed in the interviews.

- **Counter-narratives on the risks of going to Syria are being heard…but not fully understood.** Across all regions, researchers heard frequent stories of how teachers, police, or imams have been highly visible in conveying the dangers of going to Syria. People were aware of public outreach events by the Ministry of Interior in Osh, Batken, and Jalalabad in 2016. Multiple respondents talked about the active engagement of the 10th Department of the Ministry of Interior in raising awareness among the population, including through meetings and roundtables. The breadth of outreach from these stakeholders and from the media is apparent from the numerous references throughout this research.

  However, nearly half of the youth interviewed in this study overtly stated that while they may have heard of radical organizations or could name specific groups like Jabhat al Nusra, Al-Qaida, ISIS, Islamic Movement of Uzbekistan or others like Taliban, Hizb-ut-Tahrir, Ahmadiyyah or Akramiya, they only know that these groups are illegal, yet are not really aware of the motivations or intentions of these groups or the specifics on

---

6 The physical asset base of quality housing stock, large number of imported vehicles, and enhanced infrastructure is notably advanced from those early post-Soviet years. It would be hard to deny that the flow of remittances created a significant level of favorable economic conditions for many people.
why they are a threat. Youth also largely stated that they did not know much about who is fighting against whom in Syria. In absence of information pertaining to why groups are a threat, there is a risk that extremists can fill in those narratives in a way that appeals to young people who are ill-equipped to consider counter-narratives.

Recommendations:

❖ **Build greater trust in government through community engagement**

While many people in this research described Kyrgyzstan as a “democracy,” few articulated that their interests were well-represented by government. There appears to be a wide gulf between those who govern and the governed. Youth particularly feel the inattention of elected officials to their needs and the needs of their communities. Elected officials should be encouraged to conduct listening tours with their constituents in periods outside of election cycles. Open forums and round-tables sponsored by parliamentarians and local government officials can enhance the perception that government is taking an active interest in the needs of the population. And responding to some of the needs that are articulated in these dialogue events can go a long way towards confidence-building in government.

❖ **Strengthen a shared sense of national identity through a national integration plan**

National dividers abound: young people noted the lingering Soviet-style designations by ethnicity within passports, the challenges with access to jobs and higher education because of Kyrgyz language requirements, and the different worldviews developed through public schools, Uzbek schools, or madrassahs. The creation of a comprehensive national integration plan is essential to assess these dividers, to seek broad public participation, and to craft tangible and meaningful steps towards government-sponsored integration efforts. Special attention needs to be given to redressing the insufficient Kyrgyz language skills among ethnic minorities and ensuring that some form of temporary language accommodation is given to ensure greater minority access to government jobs and education.

❖ **Use community development to promote stronger inter-ethnic connections between youth**

Community-development initiatives can serve as substantive ways to bring youth from ethnically different groups together. Jointly identifying shared challenges and working to design and implement solutions can alleviate those issues while simultaneously fostering deeper relations between people, groups and communities.

❖ **Enhance confidence in the electoral process and greater involvement of migrant youth**

Enhancing trust in government requires improving confidence and participation in the electoral process. The present administration is taking important steps in eliminating election fraud, including the incorporation of biometric data and public statements against vote-buying. Legal enforcement against officials who buy votes should be swift and well-publicized. Encouraging migrant youth to vote will require not only confidence-building, but also mechanisms to facilitate absentee-voting, registration of biometric data, and awareness campaigns to enhance voter literacy around party platforms. Strengthening civic education at the primary and secondary school level can instill an appreciation of personal responsibility, an understanding of the function of government and a commitment to working towards a vibrant democratic state.

---

7 ISIS, Jabhat al Nusra, Al-Qaïda Islamic Movement of Uzbekistan follow Salafi-Jihadi ideology. Akramiyyya also follows Salafi beliefs, however the extent to which jihadi violence is part of their philosophy is unclear. The Taliban follow Deobandi ideology. While Hizb-ut-Tahrir has some features in common with Salafi groups, they pursue a broader view of pan-Islam.
- **Build awareness and tolerance of differences in religious traditions at school**
  The state should work with religious leaders and schools to develop a nation-wide curriculum on religious differences and cultural practices within Islam and across other world religions. All schools, including public and private, religious and secular should incorporate this curriculum, not only as part of religious literacy, but as a mechanism for promoting greater understanding of legitimate differences in lawful forms of religious practice.

- **Provide youth with greater coping skills to resist the influence of violent groups**
  Civil society organizations and schools can effectively combine their effort to provide youth with transferable life skills before they have the possibility of migrating in the 9th grade. A focus on life skills can help young people to not only more confidently navigate life’s social, political, economic, and personal transitions, but also be more resilient to messages of violence - whether along ethnic lines or for recruitment to international groups.

- **Expand counter-narratives on violent extremism to create more specificity on risks**
  An absence of sufficient specificity about motivations and threats posed by extremist groups can create curiosity from young people about those groups. Social media, rumors, and active extremist recruiters fill the void with details that serve their own agenda. While the government should be commended for its robust outreach efforts on dissuading people from migrating to Syria, adjusting the message to include more details about the particular threats posed by these groups can serve to create greater negative impressions about them and combat the narrative that they can create viable alternatives to the existing government. Using civil society and youth peers to amplify the message can help reach a broader audience.

**ACKNOWLEDGEMENTS**

Mercy Corps is grateful to the United States Agency for International Development and International Resources Group (IRG) for the generous support for this research. Interviews were conducted by Kyrgyzstan-based teams from Mercy Corps and the Foundation for Tolerance International.
Introduction

Research conducted by Mercy Corps and Foundation for Tolerance International (FTI) in March and April 2016 in Kyrgyzstan reveals that there are a number of risk factors related to violence that exist within the studied youth population of southern Kyrgyzstan. While it is unlikely that any of these factors in isolation is sufficient to cause devolution into communal violence or recruitment into violent extremist organizations (VEOs), the combination of any of these factors could increase the potential for youth to be successfully manipulated by those seeking political, economic or ideological gain within Kyrgyzstan and beyond its borders. This research, covering four provinces, indicates that while vulnerabilities to manipulation exist in both southern Kyrgyzstan as well as Issyk-Kul in the north, the frequency and texture of interview responses suggests that there is comparatively enhanced overall risk of manipulation among youth populations from Osh, Jalalabad, and Batken. Additionally, while there are some differing risk factors confronting both ethnic minorities and the ethnic majority in the south, both groups of youth are expressing a commonality of many frustrations. One should not conclude, however, that the interview data reveals that there is a certain probability of violence or that respondents in this research are predisposed towards violent action or recruitment to VEOs. However, the expressed themes emerging from conversations with these youth point to many of the same set of frustrations and issues that are reportedly being used by recruiters to attract Central Asians to participation in VEOs, including ethnic exclusion and marginalization.  

Kyrgyzstan is characterized by a young, rapidly expanding population, high levels of rural poverty, insufficient domestic jobs for working-age people, and a high dependence on Russia as a source of remittances. Evidence, supported by these research findings, suggests that an enormous number of young people travel abroad for work at any given time: Official statistics place the number near half a million; with unofficial reports substantially higher. During this research, it was not uncommon to find communities devoid of nearly all young men between the ages of 18 and 25. Layered on top of these predominantly economic considerations is a history of conflict and divisions along ethnic and geographic boundaries, particularly in southern Kyrgyzstan. The precipitous reduction in remittances from Russia due to contractions in the Russian economy in the last two years and changes in the ruble/som exchange rate have spurred questions about the population’s vulnerability to destabilization or recruitment to Salafi jihadi organizations.

Research Questions

The goal of this study was to understand the vulnerability of youth to be mobilized towards violence within the borders of Kyrgyzstan or beyond. Under the heading of violence, this research considered the vulnerabilities to communal and political violence, as well as Salafi jihadi violence. The rapid change in household remittance income in Kyrgyzstan and employment status of migrants related to the deep economic crisis in Russia had raised speculation that there may be changes in attitude among youth related to violence. Simultaneously, the

10 Salafi Jihadi groups emphasize that it is essential to return to the Islam as practiced by the Salaf (ancestors); and that defense of Islam through jihad is a duty. Promotion of the use of sharia under territories of control are a common feature. For a more detailed discussion on Salafi-Jihadi organizations, see: Jones, S.G. (2014), A Persistent Threat: Evolution of al ‘Qa’ida and other Salafi Jihadists, Rand National Defense Research Institute.
reported participation of youth from southern Kyrgyzstan in the war in Syria and Iraq raised further questions about whether economic and social conditions were playing a notable role in vulnerability of youth to attraction toward Salafi jihadi organizations. Additionally, while considered to have greater freedom of religion in Kyrgyzstan, compared with neighboring Tajikistan and Uzbekistan, the Pew Research Center on Religion and Public Life designates Kyrgyzstan as having “high” level of government restriction on religion, with 32 percent of respondents indicating that they did not feel free to practice their religion.\(^\text{11}\) Further, given public statements by former Prime Minister Temir Sariev about the need to remove “foreign adaptations” of Islam from Kyrgyzstan, such as the hijab, there exists the potential that changes in some aspects of religious freedom may emerge.\(^\text{12}\) To this end, we sought to examine:

- To what extent does rapid-onset household-level economic deterioration affect acceptance of violence?
- To what extent does perception of religious freedom, including political voice, affect acceptance of violence?
- To what extent does attitude toward the national government change as economic conditions and perception of religious freedoms, including political voice, change simultaneously?
- To what extent does attitude toward Salafi jihadi organizations change as economic conditions and perception of religious freedoms, including political voice, change simultaneously?

Perceptions, regardless of accuracy, create a reality for the people who hold those views. This paper does not seek to comment on the truth or falsehood of those perceptions. Rather, this research hopes to shed light on the consistency of themes of note. The purpose of this type of research is to provide policy makers and key stakeholders timely analysis so that interventions can be made to prevent vulnerabilities from manifesting into crises. As these interviews are a snapshot in time, they do not provide insight into changes in risk over time nor do they provide a comparative level of urgency at present. Despite the comprehensive nature of this qualitative research and the key themes, one should not conclude that the country has reached an irreversible tipping point toward instability. There are signs of concern, however, that need to be addressed in the short to medium term. Based on the findings of this research, it is strongly recommended that a quantitative survey be administered in the near term and subsequent annual quantitative surveys be utilized precisely as a tool to gauge changes in attitudes and perceptions and, in turn, vulnerability among youth.

The report concludes with recommendations that emerged from analysis of the data, as well as related suggestions from the youth and key informants interviewed.\(^\text{13}\)

**Methodology**

This research was conducted in Kyrgyzstan between March and May 2016 in the southern provinces of Osh, Jalalabad, Batken, and in the northern province of Issyk-Kul. In 2010 southern Kyrgyzstan saw an outbreak of violence between ethnic Kyrgyz and ethnic Uzbek citizens. Known locally as the Osh Events, this violence resulted in mass casualties, displacement and destruction of physical infrastructure in the South. In addition,

\(^{13}\) During May 2016, Mercy Corps conducted roundtable meetings with a broad set of stakeholders in Jalalabad, Osh, Batken, Issyk-Kul and Bishkek to review findings and refine recommendations. The recommendations in this report reflect those conversations. Additional detail from those roundtable meetings can be found in the appendix to this report.
southern Kyrgyzstan is a known origin of people migrating to Syria to join Jabhat al-Nusra or the so-called Islamic State, with official figures citing fewer than 500 people from Kyrgyzstan.\(^\text{14}\) Issyk-Kul was selected as a comparator province due to its multi-ethnic composition and lack of conflict history. While this research did not specifically seek out people who migrated to join the fight in the Middle East, some respondents were directly aware of neighbors, friends, acquaintances or people from their communities who had gone.

Respondents were identified through a snowball (chain-referral) technique, with initiating points for the snowball in rural and urban areas and ethnically homogenous and heterogeneous communities spread across the four provinces. Quotas were established to ensure that the voices of ethnic majority and ethnic minority youth as well as male and female youth were captured. Trusted key-informants were asked to nominate potential respondents. Respondents were then, in turn, asked to nominate further respondents until the quotas were met. While this non-probability methodology means that that the findings cannot be generalized beyond this particular group of respondents, they provide important considerations of risks and vulnerabilities confronting youth in Kyrgyzstan.

A team of male and female researchers led the face-to-face interviews in the relevant local language (i.e., Kyrgyz, Uzbek, Russian), using a common interview guide containing three separate semi-structured instruments for use with migrant youth aged 18 through 24, youth aged 18 through 24 who had not migrated but were from remittance-receiving families, and key informants, drawn from community leaders, civil society leaders, religious leaders, police and government officials. Researchers had the latitude to probe for additional relevant and informative data. 159 people were interviewed across the four oblasts, with 129 people in the South and 30 people in the North. Of these, 99 were youth and 60 were key informants.

In total across the four oblasts, sixty-five percent of those interviewed were ethnic Kyrgyz; thirty percent were ethnic Uzbek, and five percent were other (ethnic Tajik, Dungan). Thirty-three percent of all interviewed were female; sixty-seven percent of all interviewed were male. All interviews were manually coded and stored using NVivo 11 software. No names were recorded throughout the research process to protect anonymity of the respondents.

Given the highly sensitive topic and illegality in Kyrgyzstan of involvement in inter-ethnic violence, participation in extremist groups, or acting as a foreign terrorist fighter, researchers did not identify or intentionally seek out youth involved in acts of violent extremism inside of Kyrgyzstan or abroad.

**Key Findings**

The major themes that have emerged from the interviews raise concern of a base set of grievances across youth in southern Kyrgyzstan, compounded by polarizing elements related to ethnic differences and perceived religious divergence. Specifically, youth interviewed for this research in southern Kyrgyzstan show evidence of ethnic divisions; with ethnic minorities, primarily Uzbeks, perceiving exclusion and injustice and ethnic majority Kyrgyz perceiving a threat to their national identity and culture [**Infringement of Ethnic Honor**]. This dynamic

seems to be exacerbated by the perception of differences of religiosity between these groups and, in some cases, equating minority ethnicity with a priori gravitation towards Salafi jihadism [Perceived Divergence of Religiosity]. Physical separation of ethnic groups, either in neighborhoods, homogenous communities, schools, mosques or otherwise, and yet proximate to each other is indicative of insular communities with decreasing opportunities to interact and counter negative perceptions. [Separation and Isolation]. Youth who have migrated are exposed to new people and ideas; often living, working, and worshipping with other central Asians, Russian speaking migrants, or Turks and being exposed to both new people and networks. In some cases, this exposure brings youth in contact with recruiters [Migration Abroad]. Based on our data, we have no reason to believe, however, that there is greater risk of Salafi jihadi violence versus political or pre-electoral violence versus inter-communal violence. If manipulation does occur, any and all of these levers could be pulled in stages or simultaneously.15

Violence and recruitment to violent groups are neither inevitable nor predictable. While southern Kyrgyzstan has a history of communal violence and is the origin of some people who have become involved in the conflict in Syria and Iraq, the interview responses in this research provide no clear indication that there is either an imminent risk of future violence or expansion of recruitment to Salafi jihadi organizations among these youth. However, a number of common themes of frustration, anger and animosity across migrant and remittance-receiving youth raise concern of the potential for manipulation toward violence. Of particular concern is the identification of themes through this research that align with the recruitment messages used by violent extremist organizations (VEOs) in Syria and Iraq and consistent with findings from Mercy Corps’ multi-country research into youth attraction to violence, particularly related to corruption, inequality and injustice.1617 Yet there is no indication that the risk of Salafi jihadi violence outweighs the potential of political, pre-electoral or inter-communal violence in this data. Depending on who does the manipulation, any and all of these levers could be pulled in stages or simultaneously.

Some migrants from Kyrgyzstan have found their way to Syria, though their exact number is highly debated.18 While this research did not specifically seek out people who migrated to Syria, some respondents were directly aware of acquaintances, neighbors, or people from their communities who had gone to Syria. The communities of origin of these youth included two in Batken Oblast, two in Jalalabad Oblast, four in Osh Oblast, and two in Issyk-Kul Oblast. According to the acquaintances, some of these young people migrated to Russia first and then subsequently traveled to Syria. Others, however, had never been in Russia and traveled directly from Kyrgyzstan to Syria. In some of the cases, people cited a change in religious observance and behavior in Kyrgyzstan or in

15 A focus on grievances as a key underlying factor leading to instability is insufficient: Conflict entrepreneurs with greed as an underlying motivation must be taken into consideration. Predation, whether by organized crime, separatist leadership, or terrorist group plays a critical role in instability. See Collier, 2006.
Russia just prior to departure for Syria, implying a relatively rapid change. In other cases, people did not notice any outward changes in behavior. The people who traveled to Syria were described as either average income or poor. A few people suggested that the motivation of their acquaintances was driven by economic factors, including the repayment of loans. Others, including someone who attended mosque with a Syria migrant said that motivation was to speed entry to heaven through jihad. One could surmise that a variety of motivations are at play, with none dominant.

References to recruiters and access to finances for travel, however, suggest that these people each interacted with someone who facilitated or encouraged travel. Mercy Corps also knows through global research that third-party accounts of why youth choose to participate in violence often diverges from what participants themselves say about their decisions; thus, these perspectives should be considered as some of many possibilities.

Five specific themes emerged in the course of the research that illuminate the conditions that place youth in Kyrgyzstan at risk of manipulation towards violence:
- Ethnic divisions between majority and minority ethnicities are solidifying.
- Fault lines are emerging along differing patterns of religious expression and perceived piety.
- Lack of confidence in government is eroding the credibility of state.
- Youth are frustrated by unmet economic expectations and the pressure to migrate.
- Counter-narratives on the risks of going to Syria are being heard, but not fully understood.

**Divisions between ethnic majority and minorities are evident and fraught.**

The events of 2010 seem to have left a legacy of caution between ethnic groups, with ethnicities gravitating even more so than before to their own linguistic and ethnic circles. Underneath the surface calmness, inter-ethnic animosities and distrust are evident from numerous comments made throughout this research. With the shadow of the 2010 events still present in people’s minds, open conversations about inter-ethnic relations remain difficult for some people, particularly among key informants.

Invocation of undefined “third parties” as agitators and manipulators of youth into violent action is a common narrative. Similarly, there is an expressed sentiment from some that there is no inherent problem between the ethnicities, rather only between some “bad people” or as a result of political forces. Many expressed hope that with the passage of time, people will “forget” the events of 2010 and that tolerance, if not harmony, will prevail.

However, the extent and tone of comments among respondents, particularly migrant youth and youth remittance recipients, belies a more complex story. More than one-third of all respondents mentioned continued tensions between ethnic minorities and the ethnic majority or made overtly negative statements about another ethnic

---

"I do not support violence in terms of attacking. If the question is about [defending] your family, ethnicity or faith, it is not only possible, but also necessary that this will not happen again in the future."

Youth Migrant from Jalalabad

“Uzbeks are more nazis (нацисты), than we, the Kyrgyz. We are more open and friendly. They are closed and cunning.”

Youth Migrant from Osh
group. The greatest frequency of comments and depth of tension in the interviews occurred between ethnic Kyrgyz and ethnic Uzbeks in the three southern Oblasts. Literature suggests that large diaspora communities preserve the memory of conflict and thus slow down the healing process in a country. \(^{19}\) The enormous number of economic migrants from southern Kyrgyzstan who are under 25 years old experienced that difficult period in 2010 during an impressionable time in their lives.

Distrust and animosity, while perhaps in part a legacy of the 2010 events, is noted in various forms from ethnic Kyrgyz towards ethnic minorities and from ethnic Uzbeks, Tajiks, and Dungans towards ethnic Kyrgyz, suggesting a broader division between majority and minority ethnicities. The bravado of ethnic honor plays out in the very few explicit statements where youth affirm that violence can be justified. Additionally, we found that ethnic honor presented itself at times in a form of inter-group jealousy. Not only did it emerge in conversations related to exclusion and injustice in access to jobs or equitable treatment from minorities, but also in descriptions about superior economic and living conditions of certain ethnic groups or superior ability of minorities to start businesses or access less-labor intensive trade jobs abroad. Related to the above discussion on relative deprivation, Stewart found that inter-group inequalities in the social, political and cultural dimensions can be predictive of instability. \(^{20}\)

Our conversations further indicated that border tensions between Kyrgyzstan and neighboring Uzbekistan and Tajikistan and related cross-border tensions between ethnically homogenous communities is potentially having a negative impact on the attitude of ethnic groups towards each other within the border areas of Kyrgyzstan. Among the 27 comments about the borders, people discussed their perception that the tensions along the border not only reflects poorly on the State’s ability to protect its people, but also how inter-country animosity is also realized through local expression between ethnic groups, particularly in Batken and Jalalabad provinces.

While southern Kyrgyzstan has long had both homogeneous and heterogeneous communities, our conversations indicated that there are increasingly fewer places where the ethnicities meet: Often ethnic Uzbeks are pursuing education in Uzbek schools; ethnic Kyrgyz and ethnic Uzbeks frequently worship in different mosques; private sector employment, when available domestically, is only accessible through family and acquaintance networks, often ethnically-based. In addition and related is the social separation that occurs with circles of friends, family and acquaintances. Whereas intermarriage between ethnic Uzbeks and ethnic Kyrgyz was not uncommon in the past, some respondents highlighted challenges that they have faced due to a mixed marriage or

---

attempts at inter-ethnic dating, including threats from young people from a different ethnicity.

The separation between ethnic groups is, in part, exacerbated by language differences. In an apparent effort to redress this issue, Kyrgyzstan has taken the step of requiring Kyrgyz language proficiency for entry into university or for entry into state jobs. While the long-term hope is undoubtedly for linguistic integration to facilitate greater national harmony and identity, the short-term result, voiced by young people we spoke with, is exclusion of ethnic minorities in higher education or into the few steady salaried jobs that exist in southern Kyrgyzstan. For ethnic Uzbeks who often study at Uzbek-language schools, the hurdles of acquiring these necessary language skills are high. Further, some ethnic Kyrgyz youth described their strong dissatisfaction that ethnic minorities speak in their own language, rather than the language of the state.

Beyond minority exclusion through academic and workplace language requirements, some youth expressed perceptions of injustice in the uneven application of rule of law, manifested both through police interactions and through the courts. All but one of the explicit comments made by youth about unfair treatment by police officers came from ethnic Uzbeks and ethnic Tajiks. Further, the perception by some that the police are predominantly, if not exclusively, ethnic Kyrgyz, creates the impression with some that bias is inevitable.

The combination of physical and social separation of ethnicities and perception of group inequity can foster insular communities, particularly in rural areas, further hindering national reconciliation and integration. Taken to extremes, these sentiments can call into question the very essence of a national identity and the overall concept of Kyrgyzstan as an organizing principle for all.

Fault lines are emerging along differing patterns of religious expression and perceived piety.

The evolving expression of Islam in southern Kyrgyzstan is broadly noted by youth and key informants and readily observable. While there is some debate on what constitutes religiosity, the increasing number of mosques, enhanced attendance at Friday prayer, reported decreases in alcohol consumption by youth, compared with older generations, change in dress, elimination of music at weddings and earlier marriage for girls suggests that piety is increasing. But while religiosity is perhaps on the rise overall, it is neither perceived as homogenous nor ubiquitous. Importantly, the increasing practice of Islam qua Islam is not necessarily viewed by those interviewed as problematic, with a number of people highlighting the stabilizing and calming effect of Islam. The differences in perception of piety or

“It can be said that there is a great risk of repeating of the great conflict again. Because of existence of unfairness in the country toward ethnic minorities, for instance, [here] the Mayor’s Office should distribute land for the construction of houses to minorities, and the majority. Kyrgyz receive plots while Uzbeks remain without them.”

Youth Migrant, from Batken

“Now a lot of Kyrgyz people practice prayer five times per day, even in Russia. As for the Uzbeks, they seem to have another understanding of Islam. They believe that if they kill the infidel they go to paradise. For this reason they join the Wahhabis.”

Youth Migrant from Jalalabad
perceptions of what constitutes appropriate understanding of Islam, however, serve as emerging fault lines that risk using religion as a galvanizing point for manipulation to violence. These fault lines are manifesting on two fronts.

The first is along ethnic divisions. The driving impression, often tinged with negativity when articulated by ethnic Kyrgyz, is that ethnic Uzbeks appear more religious than ethnic Kyrgyz; more young girls wear hijab; males are dressing like Arabs or Pakistanis; many boys are educated in madrasah rather than public school; and weddings are following a more conservative style. Simultaneously, the narrative, conveyed initially by the Kyrgyz government, that the majority of those from Kyrgyzstan who have joined Islamic State are of Uzbek ethnicity, seems to be embedding itself in public perception.

Uzbek attraction to extremism or the fight in the Middle East was echoed repeatedly by non-Uzbek interlocutors during the course of this study with numerous mentions of how Uzbeks have a different view of Islam. Regardless of accuracy, the perception that a specific minority ethnic group is dressing differently, displaying differing religious behaviors, and is demonstrating attraction to extremist violence abroad and potentially back in Kyrgyzstan risks creating identification of this group as deviant and a threat. The outlines of this were notable in a number of comments from people we interviewed.

An actual or perceived affinity for participation in violent extremism due to ethnicity can further exacerbate ethnic tensions, harden ethnic identity, and risk destabilizing communities, particularly if targeting on the basis of identity is allowed to occur. Actual or perceived ethnic association with violent extremism indicates the need to better understand the needs and grievances of minority communities, and ensure that greater understanding exists between minority and majority populations. Researchers have suggested that groups with distrust and a perception of vulnerability from another group are at enhanced risk of conflict.

The second front exists between the practice of traditional cultural Islam and more conservative Islam. Certainly there is near uniform agreement in the interview corpus that, unlike Tajikistan and Uzbekistan, Kyrgyzstan protects freedom of religion. But some are expressing concern that there is too much freedom of religion and that with such an accommodating legal structure, Kyrgyzstan opens itself to risk of growing the Salafi/Wahhabi presence. The perceived disproportionate number of madrassahs compared with public schools; the appearance of wandering daavatchi missionary preachers; the avoidance of cultural celebrations like Nooruz; and wearing Middle Eastern or South Asian attire

---

is an affront to those who see Central Asia’s syncretic form of Islam as part of the national culture and heritage. For many youth, particularly among ethnic Kyrgyz, Islam seems to play more of a cultural role in their identity than a religious role. And in these cases, youth self-describe as Muslim, following some religious traditions because they are part of their understanding of being Central Asian, but not abstaining from alcohol consumption or necessarily adhering to the pillars of Islam.

Globally, Salafi jihadi groups have demonstrated that exploiting divides between true believers and apostates is fertile ground for strategic gains. Most commonly, this division is realized along the Sunni and Shia divide (e.g., Iraq, Syria, Yemen) or along the Salafi and Sufi divide (e.g., West Africa, Horn of Africa), with Shia and Sufis both being depicted as apostates. While some analysts consider Kyrgyzstan less opportune territory for such divisive strategies, believing the practice of Sunni Islam there to be homogenous, the growing divide between visibly conservative Muslims and less overtly observant Muslims has the potential to be exploited, particularly with the overlay of ethnicity.

Further, Kyrgyzstan lacks a conceptual construct of what it means to be a Kyrgyzstan national. There is no reflection through our conversation that there is a compelling or accepted narrative that is being used by the State to convey a uniform sense of national pride across ethnic groups, religious adherents, or northerners and southerners. In absence of a unifying identity through shared citizenship in the State, there is a potential that alternate identities will emerge to supplant the concept of State.

Some discussed the power of religion, specifically Islam, to serve as a unifying idea. Our interviews showed that nearly half of the respondents spoke positively about sharia, with some describing how Islam and sharia could be a potential complement to the current governance structure. Interestingly, however, many young people conveyed their interest in Sharia, while simultaneously stating that they are insufficiently educated in understanding sharia. While perception-oriented, when discussing the topic of violent extremism or migration to Syria, many youth respondents and key informants speculated that low religious-knowledge is one reason why recruiters may be successful in attracting people. Recent examination of 4,600 Islamic State

---

personnel records, including that of 65 residents of Kyrgyzstan, revealed that approximately 70% of these people self-certified only basic knowledge of Sharia.24

The narrative of the caliphate, potentially offers a concept of state that transcends ethnicity and nationality, promotes a transparent and consistent legal framework, albeit brutal, punishes corruption, and promulgates inclusion under the banner of Islam. For those who see government as distant, corrupt and failing them, any credible option may be valid. For those who can look past the brutality of Islamic State or see that brutality as an important part of the cause, this narrative may become appealing.

**Lack of confidence in democratic processes and government is eroding the credibility of state.**

The concept of a unified pluralistic state appears to be deeply fractured among a notable portion of the youth interviewed in this research. The expressed lack of confidence in government and state bodies to be in touch with the people and to address economic challenges top the list of issues raised by many youth who were interviewed, with no discernable difference between comments made by youth migrants or youth remittance-recipients on this topic. And while there were some noted differences in issues of equity and justice across ethnic groups as mentioned above, criticism of elected officials and state entities to satisfactorily serve the people was evident in voices across ethnicities and regions.

Beyond the, perhaps predictable economic issues, other common themes of frustration emerged. Approximately thirty percent of all respondents raised the topic of corruption and nepotism, both generally, as well as citing specific examples of situations that they have encountered in day-to-day life. Approximately the same proportion of migrant youth, remittance-recipients and key informants expressed indignation towards apparent systemic corruption experienced at the hands of school teachers, traffic police, doctors, and other state officials. More than one-third of all respondents made statements related to lack of confidence in political parties, state entities or officials, with common remarks repeating around elections and the perception of unfulfilled promises. While some of the youth from this study stated that they voted in the recent parliamentary elections, many did not. For some, work abroad or a missing passport or biometric data prevented them from voting.25 Others did not vote, simply expressing a lack of belief that their vote would bring changes. It is unclear the extent to which apathy is playing a role in not voting. But if there is indeed a

---

25 Biometric data reading devices and electronic ballot boxes were mandated by the Government of Kyrgyzstan prior to the 2015 Parliamentary elections to help minimize the possibility of voting irregularities.
significant portion of youth not exercising their right to vote, yet expressing substantial frustration with issues of governance and limited substantive contact with elected officials, then there is a gap in this key democratic process that should be addressed.

Despite efforts by Kyrgyzstan’s President Almazbek Atambayev to discourage the population from selling votes during the parliamentary elections, a number of youth we spoke with raised the point that politicians use money to buy allegiance and votes from constituents. According to some youth, they received 1,000–1,200 som to vote for a particular party or candidate. Though macro-level evidence from Collier and others indicates that poorer countries have a higher risk of conflict as a result of attraction to financial compensation for participating in political violence, the evidence regarding individual attraction to violence based on poverty is mixed. The fact that some young people in southern Kyrgyzstan are willing to accept money to vote a certain way, does not necessarily mean that they would also be willing to commit acts of violence for money. But the presence of money in the political process does demonstrate the potential for mobilization through monetary means.

There is a belief, expressed by 23 people interviewed for this study, that “third parties,” “third forces,” or “influential people” were the catalyst of political instability in 2010 in Kyrgyzstan and have the potential to ignite instability in the future by actively encouraging young people towards violence. While merely impressions, the large number of comments is noteworthy since it indicates a belief that there is both a history and presence of conflict entrepreneurs and that young people continue to be susceptible to this type of influence.

When the belief in governance is fractured, there is a risk that young people will be attracted to alternatives. If there is confidence in the transparency and accountability of government and assurance that election processes are honest, then there is a hope that young people will be encouraged to seek those alternatives through peaceful change at the polls. Steps taken by the government of Kyrgyzstan related to polling transparency and

---

26 http://tass.ru/en/world/821551
28 Goldstone et al note that “most states have potential insurgents with grievances and resources, but almost always possess far greater military power than do insurgents. A united and administratively competent regime can defeat any insurgency; it is where regimes are paralyzed or undermined by elite divisions and state-elite conflicts that revolutionary wars can be sustained and states lose out to insurgencies.” See: Goldstone, J (2010), “A Global Model for Forecasting Political Instability,” American Journal of Political Science, 54(1), pp. 190-208.
discouraging vote buying and selling are important. Confidence-building in such democratic processes is invaluable. The notable distrust and critical assessment of the political processes in Kyrgyzstan suggests that, at least for some, the voting booth has not demonstrated tangible improvements in the issues that are meaningful to the youth population. It would seem from comments made by respondents that those who bring the promise of a different future and inspire trust have the potential to galvanize populism.29

Unmet Economic Expectations

Kyrgyzstan is experiencing economic shock as a result of external conditions related to Russia’s economy. A profound drop in remittance flows and value are adversely affecting household spending, according to the youth and key informants that we spoke with. The primary identified household impact is related to the drop in exchange rate for Russian rubles. Many described the previous long-term consistent exchange rate as approximately 1 ruble for 1.5 som and the more recent rate dropping to approximately 1 to 1. This perception matches current and historical exchange rate figures (See Figure 2). For those relying on remittances from Russia as a supplement to income, the impact is tangible and described extensively by nearly every person interviewed.

The second impact of the Russian economic crisis highlighted by migrants is related to the increased difficulty in finding steady employment in Russia. While work is still available, it is less predictable and less regular than previously. The net result is that many economic migrants interviewed are realizing decreased income while abroad. Frequently working multiple jobs, predominantly as unskilled labor, young people described the substantial increase in difficulty to make ends meet abroad. Decreased incomes are causing migrants to use a relatively larger percentage of their income to support their own living conditions in Russia. They report that they are still sending money back to their extended families in Kyrgyzstan when they have some surplus. But those transfers are happening less frequently and at lower levels according to both migrants and remittance-recipients. Research by Regan and Frank suggests that high levels of migrant remittances can have a dampening effect on the risk of instability for a country. Conversely, a substantial reduction in the value of remittances reduces this dampening effect.30

The concerning aspect for stability, however, is not likely the result of dire absolute poverty from these remittance reductions, though that undoubtedly exists in southern Kyrgyzstan. The real issue revealed in

conversations with youth and key informants alike is the experience of relative deprivation that seems to be pervading all corners of the southern population. People may be better off today than they were in the 1990s, but these young people, born between 1991 and 1998, have keen awareness that they are far worse off today than they were just two years ago.  

This finding holds across all ethnicities and geographies in this study. The years of high remittances, ability to remodel or build homes, celebrate weddings or purchase higher-end commercial goods created both an overtly stated and implied expectation among these youth that is no longer achievable at the same level. Further, the overwhelming majority of southern youth migrants and remittance recipients described primary uses of remittance money for housing improvements, consumables and events, with scant mention of investments in future income-producing assets, such as cattle or businesses, raising concern about household resilience. It is the unmet expectation of purchasing power, quality of life and growth that is a source of economic frustration revealed in the interviews. Relative deprivation theory highlights that large differences between expected and actual economic and living conditions can be a factor that fuels instability and increases the chance of rebellion.

Youth feel heavy pressure to continue to migrate

Despite the deep economic crisis in Russia, young people from Kyrgyzstan continue to migrate abroad for work. Those we spoke with recognize that their earning potential abroad is still superior to that in Kyrgyzstan, even in the face of challenges in the Russian economy. In fact, interviews suggest that people are leaving at young ages, often foregoing completion of their studies to maximize their earning potential abroad. Russian Central Bank data shows that while the remittance value sent to Kyrgyzstan has dropped, the number of migrants has actually increased in the past year. It appears that this is, at least in part, a reflection on the expansion of family members traveling abroad to fill the gap left by remittance reductions.

Interestingly, 15 percent of the youth respondents in our research indicated that work abroad was a necessity to pay off their debt, sometimes for specific unexpected needs such as agricultural loses, sometimes for planned expenditures like weddings and home renovation or construction. Some key informants stressed that indebtedness is extensive among the population. In a handful of statements, some of the people we spoke with who knew community members who had migrated to Syria or Iraq said that recruiters used loans as a way to bring in new recruits, particularly among people who were already indebted. While this information is neither directly verifiable, nor can one extrapolate from the likely presence of broad indebtedness to enticement to extremist action, it is noteworthy because of consistency with interview information received during recent Mercy Corps research in Nigeria with former Boko Haram combatants. In that research, many youth described

“We were in debt and had to look for a job in a city. The money I earn now hardly covers living expenses, apartment rent, and we are repaying our debts in small amounts.”

Youth Migrant from Jalalabad

31 The physical asset base of quality housing stock, large number of imported vehicles, and enhanced infrastructure is notably advanced from those early post-Soviet years. It would be hard to deny that the flow of remittances created a significant level of favorable economic conditions for many people.

32 A few Youth respondents in Issyk-Kul mentioned purchase of land or animals with remittance money. But the evidence is insufficient to draw conclusions on whether there is a difference in consumption patterns in the north and south.

either accepting loans prior to joining Boko Haram or joining with the hope of receiving capital, primarily for their small informal businesses.\textsuperscript{35} This was not the exclusive motivation noted, but rather one of a number of entry points.

At times, due to the so-called “black list” or simply during down periods in labor demand, young people are returning to Kyrgyzstan.\textsuperscript{36} The vast majority of respondents indicated that they directly know people who are or have been on the “black list,” including in some cases, the respondent him/herself. While placement on the “black list” occurs ostensibly for civil or criminal violations in Russia, a number of respondents indicated that they believe the “black list” is often arbitrarily used to decrease the overall number of Central Asians in Russia.\textsuperscript{37} When a family member is unable to return to Russia, a standard coping mechanism described by the youth is to send a different family member abroad. This in and out migration of workers creates a cycle of people abroad at all times.

While some youth choose to wait out the duration of their penalty on the “black list” it appears highly common that some young people find ways to return to Russia, most typically by changing their names and paying to obtain a new passport. Illicit payments of as much as $200 were noted by respondents for this process. Where migrant youth have been forced to return to Kyrgyzstan because of the “black list” or job shortages abroad, their massively redundant skillset in construction-related industries has created surplus supply which is met by a profound lack of absorptive capacity. Even if work is found, there is a clear recognition that salary levels are comparatively low in Kyrgyzstan. Most youth migrants and many remittance-recipients stated their intent to go abroad as soon as they are able.\textsuperscript{38}

Migration is exposing youth to skills, people and ideas – some positive, some negative.

While the absence of so many young people undoubtedly creates some social negatives for a country, having a large number of young people outside of the borders has the likely potential benefit of minimizing malcontents who can become active participants in violence. There is much speculation, however, that it is precisely during this time abroad that some youth from Kyrgyzstan are in fact coming into contact with networks and individuals that draw them into violent extremism. According to Tucker, arrest reports, martyrdom statements and social media accounts created by Central Asian recruits show that they come to Syria and Iraq almost exclusively from a third country.\textsuperscript{39} This narrative was echoed by a number of community leaders, religious leaders, government officials and other key informants we met during our research.\textsuperscript{40} And external parties are similarly messaging

\textsuperscript{36} Russian Federal Migration Services place prevent people from entering Russia who have previously committed certain infractions in the Russian Federation. Duration on the so-called black list can vary from a few months to a few years.
\textsuperscript{37} The Eurasian Economic Union was referenced by 26 respondents with mixed opinions on its effect on ability to migrate and avoidance of bureaucratic and legal hurdles in Russia. While accession to the EEU is still recent, the actual impact will likely only be visible after an additional period of time.
\textsuperscript{38} A portion of migrants returned to Kyrgyzstan for health or family commitments, such as caring for aging parents.
\textsuperscript{39} Tucker, N. (2015), “Central Asian Involvement in the Conflict in Syria and Iraq: Drivers and Responses,” MSI.
\textsuperscript{40} Two key informants mentioned that they knew people who had never been in Russia, but had travelled to Syria, demonstrating that there may be multiple recruitment avenues.
the same belief, which is summed up well by this quote from U.S. Deputy Assistant Secretary of State Daniel Rosenblum:

“…once in Russia, Central Asian migrant workers are often subject to ghettoization. Many regularly experience discrimination, harassment, and humiliation from both the public and the authorities. The absence of mitigating factors such as social, familial and spiritual bonds together with the presence of aggravating factors such as marginalization and disenfranchisement create fertile ground for extremist recruiters. Recruiters are able to traverse migrant-labor heavy neighborhoods in Russia’s cities and use social media to find and target their quarry – isolated and lonely individuals who want to feel connected to something empowering and larger than themselves, often including individuals who were not previously religiously observant or educated.”

There were certainly clear expressions of dissatisfaction with having to travel abroad to find adequate work and pay. But there were many voices that described the benefits of being abroad; not least of which is the deepening of a work ethic and on-the-job skills. Descriptions indeed showed that travel and work abroad results in young people being exposed to new people, new networks, and new world views. Some articulated a gained awareness of the contrast between the standard of living of places like Russia compared with Kyrgyzstan. Some migrants described having settled into a good life with family and friends with an eagerness to return to Russia. However, there were descriptions by migrants of having experienced prejudice in Russia or having been deported or blacklisted for unknown reasons, implying injustice in Russia. But critical comments about the migration experience were not particularly robust among the interviews, save for the description of long-hours, hard work, and sometimes crammed living conditions.

Certainly not all migrants in our study are encountering isolation and lack of sense of belonging during their time in Russia. Many migrants we spoke with described living with extended family members or friends from their communities in Kyrgyzstan. Interview data shows that familial and acquaintance networks are important determinants of the types of jobs that many migrants obtain, particularly during this current economic crisis in Russia. Clusters of school classmates, family members, and communities from Kyrgyzstan working in the same industry, company or geographic location are frequently noted in the interviews.

This raises a question about the applicability of these same types of clusters towards more nefarious pursuits, such as joining the efforts of Islamic State. In multiple statements by acquaintances or community members who

41 Daniel Rosenblum Testimony
42 There is some perception that there is a difference in job type acquired in Russia based on ethnicity, with ethnic Uzbeks presumably working disproportionately in sales, trade, and cooking. The interviews from migrants and remittance receiving families, however, did not indicate a clear pattern of employment along ethnicity in this set of respondents.
knew people who travelled to Syria, often more than one person from the same area, such as 21 people from Jalalabad city or an entire family from Aravan were known to have gone. Many scholars have identified clusters and social networks as a common source of influence on participation in violent extremist groups.\footnote{Atran, S. (2010), Talking to the Enemy: Violent Extremism, Sacred Value, and What it Means to be Human, Penguin Books: London.} A Mercy Corps study of foreign terrorist fighters from Jordan demonstrated that social ties were a strong factor in recruitment.\footnote{Mercy Corps (2015), “From Jordan to Jihad: The Lure of Syria’s Violent Extremist Groups.” \url{https://www.mercycorps.org/research-resources/jordan-jihad-lure-syrias-violent-extremist-groups}}

Our interviews also provided plenty of examples of migrants who were living and working with strangers, mostly from other Central Asian countries or Turkey, and separated from traditional family and community networks. The respondents who knew people who joined the fight in Syria conveyed that these young people had spent time living and working in Russia, prior to migrating to Syria. Some of these acquaintances noted changes in behavior and attitude subsequent to their time in Russia, including changes in religious behavior. Many speculated that these young people, who were separate from their family and community networks, had fallen in with people who influenced their behavior. Some scholars have described how displacement or economic migration can create a sense of having a foot in two worlds but really fully in neither. It is argued that this can be a critical factor in driving individuals to find a community that gives them that sense of belonging and purpose.\footnote{Sageman, Marc, Leaderless Jihad: Terror Networks in the Twenty-First Century, Philadelphia: University of Pennsylvania Press, 2008, p. 6. For a discussion on youth motivation toward violence, see Mercy Corps research: Mercy Corps, Youth and Consequences: Unemployment, Injustice and Violence (2015), Retrieved from \url{https://www.mercycorps.org/sites/default/files/MercyCorps_YouthConsequencesReport_2015.pdf}. See also Blattman, C. and Ralston, L. (2015).}

But even our sample of acquaintances of people who had been recruited does not reveal a clear or unique recruitment pattern abroad. In at least two examples noted in the interviews, recruiters in Kyrgyzstan reportedly approached people in their own community who had never travelled to Russia or elsewhere abroad. So while it appears accurate that some migrants in Russia are being actively recruited for violent extremism, this is not the only channel for engagement.

As youth are incentivized to work abroad, their options shrink

The draw of relatively high wages abroad has created a vicious cycle for the youth we spoke with: As those with secondary and higher education recognize that their degrees do not command the requisite salary levels domestically, migration abroad becomes inevitable. For the limited few, the application of learned knowledge and skills is possible in Russia, Kazakhstan, Turkey or elsewhere. But for the vast majority interviewed, the path to good wages comes through long hours and hard work in menial unskilled tasks. Out of 71 migrants interviewed across the four regions, 24 described themselves as having at least partial secondary education. The remainder described having received at least partial technical or university education. Regardless of education level, nearly all youth migrants in this study found themselves working in unskilled positions in Russia. In total,
32 different types of employment were specifically noted for migrants from Kyrgyzstan interviewed for this study. All but a very limited few are categorized as unskilled labor, with a heavy emphasis in the construction industry. (See Figure 3)

Other family members and acquaintances are reportedly seeing this reality and are recognizing that if education does not equate with higher earning potential, then there is no logic in remaining in school. Some young people in this study found the quickest pathways out of school, including in limited examples, the use of bribes to fulfill requirements and acquire diplomas. For those who enter into the university or technical schools, skills acquisition is primarily to facilitate greater access to jobs abroad, rather than in the domestic market. But still, many recognize the opportunity cost of foregoing wages to study. We heard multiple mentions of a “lost generation,” with concerns that the skill level and education level of an entire generation is decreasing.

A number of respondents, including school and local officials, noted with concern that an increasing number of girls are truncating their learning. For girls, early exit from school often means earlier entry to marriage and children. Since it is culturally inappropriate for girls from southern Kyrgyzstan to travel abroad on their own, marriage affords the opportunity to attach to a migrant worker, either to accompany abroad or to receive remittances at home. Further, traditional family social structures are being stretched: Numerous examples emerge of both parents migrating to Russia, leaving their children in the care of the grandparents or other relatives, with questionable opportunities for quality education and social development. Acquiring specific technical and vocational skills is not a guarantee that young people will stay in Kyrgyzstan. Despite an articulated desire by some key informants for qualified technicians to work in communities, such as agriculturalists, plumbers, and electricians the clear absence of regular well-paying jobs in Kyrgyzstan makes staying far less attractive than migrating and likely obtaining higher wages abroad, whether in the learned technical field or not. The effect of these decisions goes beyond the individual and affects the present communities and the future development of Kyrgyzstan. The absence of skilled and technically knowledgeable workers in Kyrgyzstan has an impact on the quality of services felt across the population. Moreover, the absence of technical specialists such as engineers and agronomists deeply hinders the ability to develop industry and capitalize on Kyrgyzstan’s assets.46

46 When considering the effect of jobs in the context of attraction to violence, policy-makers often link unemployment and conflict, believing that where there is large supply of unemployed youth there is a readily available pool of potential recruits. And in an effort to redress this issue, governments and aid agencies alike have frequently focused on employability and acquisition of skills to match market gaps. However, the findings on the connection of violence to unemployment are mixed, with some researchers finding a negative relationship between unemployment and attacks on government and others finding that employment-generating programs somewhat reduce crime in cases where the violence is materially motivated. See Blattman and Ralston (2015) and Berman et al (2009).
Counter-narratives on the risks of going to Syria are being heard…but not fully understood.

“Recently my daughter-in-law, a teacher, told that school students, children from the 11th class said that it is possible to earn up to $5,000 monthly, if you go to Syria. My daughter-in-law explained to them that they go there to die… I don’t know, where they get such information.”

Key Informant from Jalalabad

Across all regions, researchers heard frequent stories of how teachers, police, or imams have been highly visible in conveying the dangers of going to Syria. People were aware of public outreach events by the Ministry of Interior in Osh, Batken, and Jalalabad in 2016. Multiple respondents talked about the active engagement of the 10th Department of the Ministry of Interior in raising awareness among the population, including through meetings and roundtables.

Similarly, media reports of arrests of people in connection with Syria migration or having affiliation with groups like Hizb-ut Tahrir were commonly mentioned. The breadth of outreach from these stakeholders and from the media is apparent from the numerous references throughout this research. Young people readily demonstrated awareness of the illegality of being involved with extremist groups or operating as a foreign terrorist fighter. And they also appear to understand that death is a potential outcome of migrating to Syria.

However, nearly half of the youth interviewed in this study overtly stated that while they may have heard of Wahhabis or Salafis or could name groups like Jabhat al Nusra, Al-Qaida, ISIS, Islamic Movement of Uzbekistan, or others like Taliban, Hizb-ut-Tahrir, Ahmadiyah or Akramiyya, they only know that radical organizations are illegal, yet are not really aware of the motivations or intentions of these groups or the specifics on why they are a threat.47 Youth also largely stated that they did not know much about who is fighting against whom in Syria. There is, of course, the possibility that some of these youth were being disingenuous for fear that they would be perceived to be adherents of these movements if they demonstrated in-depth knowledge. But the number of similar comments made by young people interviewed by a variety of teams in the four provinces supports that the preponderance of these are genuine statements of ignorance.

In absence of information pertaining to why groups are a threat, there is a risk that extremists can fill in those narratives in a way that appeals to young people who are ill-equipped to consider counter-narratives.

47 ISIS, Jabhat al Nusra, Al-Qaida Islamic Movement of Uzbekistan follow Salafi-Jihadi ideology. Akramiyya also follows Salafi beliefs, however the extent to which jihadi violence is part of their philosophy is unclear. The Taliban follow Deobandi ideology. While Hizb-ut-Tahrir has some features in common with Salafi groups, they pursue a broader view of pan-Islam.
Recommendations

A potent combination of factors in southern Kyrgyzstan poses risks for youth to be manipulated by political elites, conflict entrepreneurs or extremists. While the government effort is squarely focused on discouraging involvement in Syria, there is an absence of effort to address the root issues that resonate with youth and can serve as entry points for manipulation by a variety of actors. The narrow focus on the attraction to violent jihadism and groups like Islamic State or Jabhat al Nusra obscures the potential risks and the levers of manipulation through inter-ethnic, political, or communal violence. Addressing root causes and divider elements are essential for diminishing the potential of youth to be recruits for violence in any form.

Below are key recommendations for policymakers and stakeholders seeking to support evidence-based programming to help protect youth from engagement in violent agendas in Kyrgyzstan or beyond its borders.

 Build greater trust in government through community engagement

Young people expressed deep dissatisfaction with the lack of involvement of the government in solving problems that affect people and communities. While many people in this research described Kyrgyzstan as a “democracy,” few articulated that their interests were well-represented by government. There appears to be a wide gulf between those who govern and the governed. Youth particularly feel the inattention of elected officials to their needs and the needs of their communities, conveying that they only see officials during elections.

Officials should be encouraged to conduct listening tours with their constituents in periods outside of election cycles. Open forums and round-tables sponsored by parliamentarians and local government officials can enhance the perception that government is taking an active interest in the needs of the population. Naturally, the government cannot solve all problems confronting the population, particularly related to the depth of economic needs. However, to the extent that the population can voice their needs and feel heard, the more the government will have the opportunity to understand how the population prioritizes its own needs. The more that young people can be directly involved in conversations related to decisions that affect their lives, the better.

When appropriately engaged, youth can serve as a tremendous source of innovative ideas and fresh perspectives. Local, regional and national government departments should deliberately expand opportunities to hire young people. In doing so, not only will government, and in turn the people, benefit from the involvement of the next generation, but young people will have a greater sense of how government functions and have a vested interest in seeing positive change.

 Strengthen a shared sense of national identity through a national integration plan

National dividers abound: Young people noted the lingering Soviet-style designations by ethnicity within passports, the challenges with access to jobs and higher education because of Kyrgyz language requirements, and the different worldviews developed through public schools, Uzbek schools, or madrassahs. Educational, religious, and social circles are reinforcing a sense of separateness. The country is in desperate need of a shared sense of national identity that transcends ethnicity and religious beliefs.
Under the leadership of the President’s office, a comprehensive national integration plan should be developed to assess these dividers, to seek broad public participation, and to craft tangible and meaningful steps towards government-sponsored integration efforts. As the language gap among ethnic minorities appears to be particularly concerning, it is recommended that early efforts be made to identify opportunities to expand the study of Kyrgyz language in schools, particularly where Uzbek is the primary language of instruction. Similarly, to ensure greater minority access to government jobs and university education, legislators should consider a temporary accommodation that would bridge between the current reality of weak Kyrgyz language ability among ethnic minorities and the aspiration for universal fluency in Kyrgyz.

- **Use community development to promote stronger inter-ethnic connections between youth**
  While dividers exist between ethnic groups, the people in neighboring communities often share the same issues, like lack of water, insufficient land, deteriorating schools. Community-development initiatives can serve as substantive ways to bring youth from ethnically different groups together. Jointly identifying shared challenges and working to design and implement solutions can alleviate the shared challenge while simultaneously fostering deeper relations between people, groups and communities. The Ayil Okmotu would be well-positioned to play a leadership role. Cooperation with non-governmental organizations can also help leverage expertise to strengthen relationships between communities and to advocate effectively for common needs with government.

- **Enrich confidence in the electoral process and greater involvement of migrant youth**
  Enhancing trust in government requires improving confidence and participation in the electoral process. The present administration is taking important steps in eliminating election fraud, including the incorporation of biometric data and public statements against vote-buying. Legal enforcement against officials who buy votes should be swift and well-publicized.

  Encouraging migrant youth, in particular, to vote will require not only these trust-building steps, but also mechanisms to facilitate absentee-voting, registration of biometric data, timely update of voter lists and awareness campaigns to enhance voter literacy around party platforms. Expanded access to polling stations in the Russian Federation and voter engagement abroad can help increase participation of youth. Similarly deliberate get-out-the-vote campaigns, both within Kyrgyzstan and abroad, should be made in anticipation of upcoming elections.

  And equally important is fostering in the young generation a sense that their vote counts and that they have a responsibility to vote in a way that will put that vote to best use. Strengthening civic education at the primary and secondary school level across secular and religious schools can instill in children an appreciation of their personal responsibility, an understanding of the function of government, and a commitment to working towards a vibrant democratic state.

- **Build awareness and tolerance of differences in religious traditions at school**
  Religious differences between the overtly devout and others and between ethnic Uzbeks and ethnic Kyrgyz are already amplifying inter-group tensions. As more devout people within ethnic minority groups are perceived to have extremist beliefs, there is a risk of manifesting tension and persecution. Religious leaders and schools, with the support of the State, should develop a nation-wide curriculum on religious differences and cultural practices within Islam and across other world religions. All schools,
including public and private, religious and secular should incorporate this curriculum, not only as part of religious-literacy, but as a mechanism for promoting greater understanding of legitimate differences in lawful forms of religious practice.

- **Provide youth with greater coping skills to resist the influence of violent groups**
  Efforts should be made for providing youth with transferable life skills before they have the possibility of migrating in the 9th grade. A focus on life skills can help young people to not only more confidently navigate life’s social, political, economic, and personal transitions, but also be more resilient to messages of violence - whether along ethnic lines or for recruitment to international groups. Specifically, efforts should be made to enhance critical thinking, decision-making and problem solving tools, interpersonal skills, negotiation and refusal techniques, empathy building, and advocacy skills. Equipped with these tools at an early age will help prepare young people to be self-assured and confident in rebuffing attempts at recruitment.

- **Expand counter-narratives on violent extremism to create more specificity on risks**
  The government of Kyrgyzstan should be commended for its robust outreach efforts on dissuading people from migrating to Syria. Whether delivered by government officials directly, via television or in partnership with imams, teachers, and police, the message of the illegality and danger of going to Syria is reaching youth. An absence of sufficient specificity about motivations and threats posed by extremist groups, however, can leave a vacuum of information. For some young people this can create curiosity about those groups. Social media, rumors, and active extremist recruiters fill the void with details that serve their own nefarious agendas.

  Adjusting the counter-narrative message to include more details about the particular threats posed by these groups can serve to create a more holistic impression of why these groups should be avoided. Further, the message can be well-amplified by working closely with civil society and youth peers to reach a broader audience, either through grassroots messaging or through the use of broadcast media.

Appendix I: Interview Guides (A, B, C)

INTERVIEW GUIDE A
Semi-Structured Interview Guide for Male and Female Youth (18-24) Returned Migrants
Kyrgyzstan March 2016

Guidance to Research Teams:

This interview guide serves as the basis for discussions with respondents. As with most qualitative semi-structured interview guides, this serves as a living document that will evolve iteratively during the life of the research. These questions have been developed and will be continuously tested and refined based on the research teams’ observations following each interview. The general questions presented below are designed to initiate a conversation about the research topic. Each question is followed by a short series of follow-up probes.

It is essential that research teams listen closely to the conversation and probe with logical and timely follow-up questions that help reveal relevant information for the research topic. Do not rush the conversation. Use strategic pauses to elicit meaningful responses.

To ensure maximum trust between the research team and respondent, note takers [research assistants] will only take notes by hand using notepads and pens. Interview data will be reviewed, discussed and entered into the computer database each evening.

As the research methodology relies on snowball technique for identifying potential subsequent respondents, research teams will be certain to ask for recommendations and contact information for others to be interviewed.

Honest feedback between research team members is essential for ensuring collection of valuable and reliable information. To this end, team members should reflect on the interviewer language, interaction and behavior during the interview in order to make any needed adjustments for subsequent interviews.

Primary Research Questions: [These primary research questions will not be explicitly asked during interviews and only serve as guiding information for the research teams.]

The intent of this qualitative research and subsequent quantitative survey is to ascertain vulnerabilities of youth in Kyrgyzstan to involvement in violent agendas. The primary underlying research questions, based on vulnerabilities identified through desk research, are as follows:

- To what extent does rapid-onset household-level economic deterioration increase acceptance of violence [as a means to redress grievances]?
- To what extent does perception of religious freedom, including political voice, affect acceptance of violence [as a means to redress grievances]?
- To what extent does attitude toward the national government change as economic conditions rapidly deteriorate and perception of religious freedoms change simultaneously?
- To what extent does attitude toward jihadi organizations change as economic conditions rapidly deteriorate and perception of religious freedoms, including political voice, change simultaneously?
- What other factors contribute to increased acceptance of violence as a means to redress grievances?
Interview Procedure: Upon meeting the respondent, please take as long as you need to establish rapport with the respondent. Please inform that respondent that before beginning the interview, you will need to clarify the project and obtain verbal consent to proceed.

Please read the following Informed Consent Statement:
“
You are volunteering to participate in a research project conducted by Mercy Corps, an independent global organization. You understand that the project is designed to gather information about changes and effects of social and economic factors in Osh, Jalalabad, Batken, and Issyk-Kul. You will be one of approximately 100 people being interviewed for this research.

1. Your participation in this project is voluntary. You understand that you will not be paid for participation. You may withdraw and discontinue participation at any time.
2. If you feel uncomfortable in any way during the interview session, you have the right to decline to answer any question or to end the interview.
3. Participation involves being interviewed by researchers from Mercy Corps. The interview will last approximately 45 – 60 minutes. Notes will be written during the interview. The conversations will not be recorded.
4. The respondent’s identity will not in any way be captured or shared, and all responses will be anonymous. Absolutely no attribution will be made between the respondent and the responses, and an identifying number will be created by the interviewer that will be used for any quotes included in the research. Your confidentiality as a participant in this study will remain secure.

Uses of records and data will be subject to standard data use policies which protect the anonymity of individuals.

Do you have any questions before we begin? Do you give verbal acknowledgement and consent to be interviewed?”

Please make note whether the respondent gave consent to be interviewed? Yes/No
If yes, please proceed to the questions.

Pre-Interview Information: [Please determine and note the following information through observation, where possible. If not readily observable, please ask the respondent.]
- Interview number [sequential order of interviews conducted by the research team]
- Respondent record number [assigned according to the protocol established by the research team]
- Date of interview
- Name of region
- Name of town/city
- Name of village/community
- Gender of respondent
- Age of respondent [please ask for precision]
- Ethnicity of respondent
- Were the respondent and the research team alone for the interview
Semi-Structure Interview Questions: [Initial questions are numbered. Probes are bulleted under each numbered question. Probes are intended to be used to keep the conversation flowing and focused. It is not essential to ask the probes, if the conversation is already yielding robust responses. Remember, this is a semi-structured interview, not a highly structured survey. The interviewer must remain flexible during the interview process, and remember to probe toward the intent of the underlying research questions. Success of the interview is dependent on the interviewer’s ability to dig deeper for meaningful responses, without leading towards a specific response.]

[Ascertain extent of flow of economic migrants back to Kyrgyzstan and original community]
1. Tell me a little about yourself and your background.
   - Education? Wife? Children?
   - Are you originally from this community? If not, why are you here now?
2. Tell me about your experience working abroad.
   - What caused you to go abroad?
   - What type of work did you do abroad? Was it seasonal?
   - Did you live with other people from Kyrgyzstan or Central Asia? Did you know them beforehand?
   - Are you still planning to work abroad?
     - Were you forced to leave Russia/Kazakhstan? (As a result of low income, family matters, problems with migration services)
     - Are your friends/family/acquaintances from Kyrgyzstan still working abroad?
     - How many friends/acquaintances have returned to Kyrgyzstan in the last 1-2 years?

[Ascertain if there is increased economic pressure on households due to remittance reductions]
3. Tell me about how the remittances were used by those supported in Kyrgyzstan.
   - To whom did you send the money?
   - How did you send the money to Kyrgyzstan?
   - How important were remittances to their income?
   - Did they save any money? How? [Capital purchases, livestock, property, etc]
   - Is/was remittance money their only/largest source of income?
4. How has your household income been affected by changes in foreign-earned wages or remittance reductions?
   - Are remittances still a portion of your family’s income? From where?
   - How has the change in value of the Russian ruble affected you?
   - What are you doing differently to cope with any changes in income for you and those you supported?
   - How would you describe your family’s economic situation compared to others in your community?
5. Since returning from abroad, have you been able to earn enough income for yourself and those you previously supported?
   - How do you make a living now?
   - Do you have single or multiple income streams?
   - Has your education helped you find work?
   - Do feel that you have gaps in your knowledge/skills that are affecting your employability?

[Ascertain level of satisfaction with the government]
6. Since you returned home from abroad, have you used the local or central government for help in reintegrating and finding work in Kyrgyzstan?
   - What has been most helpful and why?
   - What has been least helpful and why?
7. Are there any challenges in your community or in Kyrgyzstan that could lead to conflict?
   - What would be the best ways to prevent this from occurring?
8. Who do you see as responsible for addressing these challenges in Kyrgyzstan?
   - Do you feel you are receiving all of the services that you are entitled to as a citizen of Kyrgyzstan?
   - Should the government and elected officials be doing anything differently to serve you and your community?
   - What do you think about government role in addressing challenges?
   - Do you believe political, ethnic, religious, social groups can be effective in addressing the concerns of young people in Kyrgyzstan? How?

9. Did you vote in the recent parliamentary election?
   - Are you part of a political party?
   - Do you do any other political activities?

[Ascertain extent of satisfaction with religious freedom (including political voice)]
10. Do people in your community feel free to practice their religion as they wish?
    - Are ethnic Uzbeks and ethnic Kyrgyz equally religious/pious?
    - Do you know about laws on religion in Kyrgyzstan?
    - What is your opinion about the laws and enforcement on religion?
    - Do people modify their behaviors related to religious expression to avoid problems? How?

11. Do you think people in your community are aware about Sharia?
    - Do you think there is interest in using Sharia in this community? As a legal framework for Kyrgyzstan?

[Ascertain extent of satisfaction with ethnic reconciliation and integration (including political voice)]
12. Do you feel that all groups of people in Kyrgyzstan have equal opportunities in life?

13. What do you think about interethnic relations in the country?
    - How could relations be further improved?
    - What factors and conditions are the main causes of ethnic tensions?

[Ascertain affinity towards violence as an acceptable expression of grievance]
14. Are there ever instances where people might feel that conflict would be acceptable?
    - Under what circumstances?

[Ascertain attitude towards jihadi organizations]
15. What can you say about the situation in Iraq and Syria?
    - What do you know about ISIS?
    - Do you believe that ISIS may become active in Central Asia?

16. Have you heard of radical trends in Islam?
    - What drives radical trends and organizations in Islam?
    - What do you know about such radical organizations in Kyrgyzstan?

Thank the respondent for his/her time and helpfulness.

Leave contact information for Mercy Corps Bishkek, in case the respondent has any subsequent questions.
INTERVIEW GUIDE B

Semi-Structured Interview Guide for Male and Female Youth (18-24) in Remittance Receiving Families
Kyrgyzstan March 2016

Guidance to Research Teams:

This interview guide serves as the basis for discussions with respondents. As with most qualitative semi-structured interview guides, this serves as a living document that will evolve iteratively during the life of the research. These questions have been developed and will be continuously tested and refined based on the research teams’ observations following each interview. The general questions presented below are designed to initiate a conversation about the research topic. Each question is followed by a short series of follow-up probes.

It is essential that research teams listen closely to the conversation and probe with logical and timely follow-up questions that help reveal relevant information for the research topic. Do not rush the conversation. Use strategic pauses to elicit meaningful responses.

To ensure maximum trust between the research team and respondent, note takers [research assistants] will only take notes by hand using notepads and pens. Interview data will be reviewed, discussed and entered into the computer database each evening.

As the research methodology relies on snowball technique for identifying potential subsequent respondents, research teams will be certain to ask for recommendations and contact information for others to be interviewed.

Honest feedback between research team members is essential for ensuring collection of valuable and reliable information. To this end, team members should reflect on the interviewer language, interaction and behavior during the interview in order to make any needed adjustments for subsequent interviews.

Primary Research Questions: [These primary research questions will not be explicitly asked during interviews and only serve as guiding information for the research teams.]

The intent of this qualitative research and subsequent quantitative survey is to ascertain vulnerabilities of youth in Kyrgyzstan to involvement in violent agendas. The primary underlying research questions, based in vulnerabilities identified through desk research, are as follows:

- To what extent does rapid-onset household-level economic deterioration increase acceptance of violence [as a means to redress grievances]?
- To what extent does perception of religious freedom, including political voice, affect acceptance of violence [as a means to redress grievances]?
- To what extent does attitude toward the national government change as economic conditions rapidly deteriorate and perception of religious freedoms decrease simultaneously?
- To what extent does attitude toward jihadi organizations change as economic conditions rapidly deteriorate and perception of religious freedoms, including political voice, change simultaneously?
- What other factors contribute to increased acceptance of violence as a means to redress grievances?

Interview Procedure: Upon meeting the respondent, please take as long as you need to establish rapport with the respondent. Please inform that respondent that before beginning the interview, you will need to clarify the project and obtain verbal consent to proceed.

Please read the following Informed Consent Statement:
“You are volunteering to participate in a research project conducted by Mercy Corps, an independent global organization. You understand that the project is designed to gather information about changes and effects of social and economic factors in Osh, Jalalabad, Batken, and Issyk-Kul. You will be one of approximately 100 people being interviewed for this research.

1. Your participation in this project is voluntary. You understand that you will not be paid for participation. You may withdraw and discontinue participation at any time.

Your confidentiality as a participant in this study will remain secure.

Uses of records and data will be subject to standard data use policies which protect the anonymity of individuals.

Do you have any questions before we begin? Do you give verbal acknowledgement and consent to be interviewed? ”

Please make note whether the respondent gave consent to be interviewed? Yes/No
If yes, please proceed to the questions.

Pre-Interview Information: [Please determine and note the following information through observation, where possible. If not readily observable, please ask the respondent.]

- Interview number [sequential order of interviews conducted by the research team]
- Respondent record number [assigned according to the protocol established by the research team]
- Date of interview
- Name of region
- Name of town/city
- Name of village/community
- Gender of respondent
- Age of respondent [please ask for precision]
- Ethnicity of respondent
- Were the respondent and the research team alone for the interview

Semi-Structure Interview Questions: [Initial questions are numbered. Probes are bulleted under each numbered question.]
[Ascertain extent of flow of economic migrants back to Kyrgyzstan and original community]
1. Tell me a little about yourself and your family.
- Are you originally from this community? If not, why are you here now?
- Who do you live with?
- What level of education did you complete? Where did you get your education?
- Do you have a job?
- Do you feel that you have gaps in your knowledge/skills that are affecting your employability?

2. Do you have family members or friends who have worked abroad?
   - What caused them to go abroad?
   - What type of work did they do abroad?
   - Did they send your family money?

3. Do you hope to work abroad?
   - Where do you hope to go?
   - Are there work opportunities abroad?
   - Do you expect any difficulties in getting abroad?

[Ascertain if there is increased economic pressure on households due to remittance reductions]

3. Tell me about how remittances were used by your family.
   - How important were remittances to your family’s income?
   - Was your family able to save? How? (Capital purchases, livestock, property, etc.)
   - Is/was remittance money the only/largest source of your family’s income?

4. How has your household been affected by changes in the Russian economy?
   - Are remittances still a portion of your family’s income? From where?
   - How has the change in value of the Russian ruble affected you?
   - What are you doing differently to cope with any changes in income for you and those you supported?
   - How would you describe your family’s economic situation compared to others in your community?
   - How does your household make a living now?
   - Does your household have single or multiple income streams?

[Ascertain level of satisfaction with the government]

5. Have you used the local or national government for help in finding work in Kyrgyzstan?
   - What has been most helpful and why?
   - What has been least helpful and why?

6. Beyond remittance reductions, what are the biggest challenges facing your region today?
   - Economic; Social; Religious?

7. Who do you see as responsible for addressing these challenges in Kyrgyzstan?
   - Do you feel you are receiving all of the services that you are entitled to as a citizen of Kyrgyzstan?
   - Should the government and elected officials be doing anything differently to serve you and your community?
   - What do you think about government role in addressing challenges?
   - Do you believe political, ethnic, religious, social groups can be effective in addressing the concerns of young people in Kyrgyzstan? How?

8. Are there any challenges in your community or in Kyrgyzstan that could lead to conflict?
   - Against whom?
   - What are the likely factors of conflicts exist and in what area?
   - Are there ways to prevent this from occurring?
   - How do you assess the activity of law enforcement or other government agencies to prevent conflict?

9. Did you vote in the recent parliamentary election?
   - Are you part of a political party?
   - Do you do any other political activities?
[Ascertain extent of satisfaction with religious freedom (including political voice)]
10. Do people in your community feel free to practice their religion as they wish?
   - Are ethnic Uzbeks and ethnic Kyrgyz equally religious/pious?
   - Do you know about laws on religion in Kyrgyzstan?
   - What is your opinion about the laws and enforcement on religion?
   - Do people modify their behaviors related to religious expression to avoid problems? How?
11. Do you think people in your community are aware about Sharia?
   - Do you think there is interest in using Sharia in this community? As a legal framework for Kyrgyzstan?
   - Do you think that religious groups (Muslim) can be effective in solving the problems of extremism and terrorism and other conflicts in Kyrgyzstan? How?

[Ascertain extent of satisfaction with ethnic reconciliation and integration (including political voice)]
12. Do you feel that all groups of people in Kyrgyzstan have equal opportunities in life?
   - Economically? Politically? Educationally? Other?
13. What do you think about interethnic relations in the country?
   - How could relations be further improved?
   - What factors and conditions are the main causes of ethnic tensions?

[Ascertain affinity towards violence as an acceptable expression of grievance]
14. Are there ever instances where you feel that violence or conflict would be acceptable?
   - Under what circumstances?

[Ascertain attitude towards jihadi organizations]
15. What can you say about the situation in Iraq and Syria?
   - What do you know about ISIS?
   - Do you believe that ISIS may become active in Central Asia?
   - What makes our citizens take part in military conflicts abroad?
16. Have you heard of radical trends in Islam?
   - What drives radical trends in Islam?
   - What is your understanding of the terms radicalism, extremism and terrorism?
   - What drives jihadist organizations?
   - What is your opinion about jihad and jihadi organizations
   - Are you aware of the existence of jihadi organizations in Kyrgyzstan?

Thank the respondent for his/her time and helpfulness.
Ask the respondent for suggestions for other remittance receiving families and other migrant returnees.
Leave contact information for Mercy Corps Bishkek, in case the respondent has any subsequent questions.
INTERVIEW GUIDE C
Semi-Structured Interview Guide for Key Informants: Business Leaders, Community Leaders, Religious Leaders
Kyrgyzstan March 2016

Guidance to Research Teams:

This interview guide serves as the basis for discussions with respondents. As with most qualitative semi-structured interview guides, this serves as a living document that will evolve iteratively during the life of the research. These questions have been developed and will be continuously tested and refined based on the research teams’ observations following each interview. The general questions presented below are designed to initiate a conversation about the research topic. Each question is followed by a short series of follow-up probes.

It is essential that research teams listen closely to the conversation and probe with logical and timely follow-up questions that help reveal relevant information for the research topic. Do not rush the conversation. Use strategic pauses to elicit meaningful responses.

To ensure maximum trust between the research team and respondent, note takers [research assistants] will only take notes by hand using notepads and pens. Interview data will be reviewed, discussed and entered into the computer database each evening.

As the research methodology relies on snowball technique for identifying potential subsequent respondents, research teams will be certain to ask for recommendations and contact information from these key informants on youth that they recommend the team interviews.

Honest feedback between research team members is essential for ensuring collection of valuable and reliable information. To this end, team members should reflect on the interviewer language, interaction and behavior during the interview in order to make any needed adjustments for subsequent interviews.

Primary Research Questions: [These primary research questions will not be explicitly asked during interviews and only serve as guiding information for the research teams.]

The intent of this qualitative research and subsequent quantitative survey is to ascertain vulnerabilities of youth in Kyrgyzstan to involvement in violent agendas. The primary underlying research questions, based in vulnerabilities identified through desk research, are as follows:

- To what extent does rapid-onset household-level economic deterioration increase acceptance of violence [as a means to redress grievances]?
- To what extent does perception of religious freedom, including political voice, affect acceptance of violence [as a means to redress grievances]?
- To what extent does attitude toward the national government change as economic conditions rapidly deteriorate and perception of religious freedoms decrease simultaneously?
- To what extent does attitude toward jihadi organizations change as economic conditions rapidly deteriorate and perception of religious freedoms, including political voice, change simultaneously?
- What other factors contribute to increased acceptance of violence as a means to redress grievances?
Interview Procedure: Upon meeting the respondent, please take as long as you need to establish rapport with the respondent. Please inform that respondent that before beginning the interview, you will need to clarify the project and obtain verbal consent to proceed.

Please read the following Informed Consent Statement:
“You are volunteering to participate in a research project conducted by Mercy Corps, an independent global organization. You understand that the project is designed to gather information about changes and effects of social and economic factors in Osh, Jalalabad, Batken, and Issyk Kul. You will be one of a number of people being interviewed for this research.

1. Your participation in this project is voluntary. You understand that you will not be paid for participation. You may withdraw and discontinue participation at any time.
2. If you feel uncomfortable in any way during the interview session, you have the right to decline to answer any question or to end the interview.
3. Participation involves being interviewed by researchers from Mercy Corps. The interview will last approximately 60 minutes [If this is a focus group interview, extend the length of time accordingly]. Notes will be written during the interview.
4. The respondent’s identity will not in any way be captured or shared, and all responses will be anonymous. Absolutely no attribution will be made between the respondent and the responses, and an identifying number will be created by the interviewer that will be used for any quotes included in the research. Your confidentiality as a participant in this study will remain secure.

Uses of records and data will be subject to standard data use policies which protect the anonymity of individuals.

Do you have any questions before we begin? Do you give verbal acknowledgement and consent to be interviewed?”

Did the respondent give consent to be interviewed? Yes/No
If yes, please proceed to the questions.

Pre-Interview Information: [Please determine and note the following information through observation, where possible. If not readily observable, please ask the respondent.]
• Interview number [sequential order of interviews conducted by the research team]
• Respondent record number [assigned according to the protocol established by the research team]
• Date of interview
• Name of region where key informant lives
• Name of town/city where key informant lives
• Name of village/community where key informant lives
• Gender of key informant
• Age of key informant[please ask for precision]
• Ethnicity of key informant
• Were the key informant and the research team alone for the interview
Semi-Structure Interview Questions: [Initial questions are numbered. Probes are bulleted under each numbered question. Probes are intended to be used to keep the conversation flowing and focused. It is not essential to ask the probes, if the conversation is already yielding robust responses. Remember, this is a semi-structured interview, not a highly structured survey. The interviewer must remain flexible during the interview process, and remember to probe toward the intent of the underlying research questions. Success of the interview is dependent on the interviewer’s ability to dig deeper for meaningful responses, without leading towards a specific response.]

[Ascertain extent of flow of economic migrants back to Kyrgyzstan and original community]
1. Tell me a little about yourself and the community where you live.
   - What is the economy like?
   - What do people do for work?
   - Are there a lot of young people?
2. Can you describe your observations about the economic migration situation with Russia?
   - Have people from your community been working in Russia?
   - What type of work do they do abroad? Is it seasonal?
   - Have there been any noticeable changes in migration in the last 1-2 years?
   - Have you seen a change in the number of people returning back to Kyrgyzstan from Russia?
   - Are they returning back to their home communities or elsewhere in Kyrgyzstan? If elsewhere, where are they going? Why?

[Ascertain if there is increased economic pressure on households due to remittance reductions]
3. Tell me about your observations on the use of remittances in your community.
   - How important are remittances to the income of people you know?
   - Are they able to save any remittance money? How? [Capital purchases, livestock, property, etc]
4. How has household income, among people you know, been affected by changes in foreign earned wages or remittance reductions?
   - Are you aware of families that used to receive remittances, but no longer do?
   - How has the change in value of the Russian ruble affected people in your community?
   - What types of people are affected most in your community?
   - What are people in your community doing differently to cope with any changes in income?
5. Do migrant returnees have the necessary knowledge and skills to obtain employment once back in Kyrgyzstan?
   - What knowledge and skills are they lacking?
   - If they were able to fill those gaps, are jobs actually available?
6. What are the most promising employment sectors for young people in Kyrgyzstan?
   - Are they any organizations that conduct market assessments to identify business opportunities? Which?
   - What type of work are young people able to find in your area?
   - Do young people in Kyrgyzstan have the necessary knowledge and skills to obtain employment?

[Ascertain level of satisfaction with the government]
7. Does the local or central government or the private sector provide services to people who have returned home from abroad to help them reintegrate and find work?
   - What type of services?
   - Job training? Employer-employee matching?
   - Is there any unemployment payment to people who cannot find a job?
8. Does any organization or government entity provide skills training for employment? Which?
   - How would you assess their success?
How do youth make the transition to work after formal school? After vocational skills training?

9. Are there any challenges in your community or in Kyrgyzstan that could lead to conflict?
   - What would be the best ways to prevent this from occurring?

10. Do you see young people engaging with government to address challenges? How?

11. What role do you see political, ethnic, religious, social groups playing in addressing the concerns of young people in Kyrgyzstan? How?

[Ascertain extent of satisfaction with religious freedom (including political voice)]

12. Do people in your community feel free to practice their religion as they wish?
   - Are ethnic Uzbeks and ethnic Kyrgyz equally religious/pious?
   - Do you know about laws on religion in Kyrgyzstan?
   - Do people in your community modify their behaviors related to religious expression to avoid problems?

13. Do you think people in your community are aware about Sharia?
   - Do you think there is interest in using Sharia in this community? As a legal framework for Kyrgyzstan?

[Ascertain extent of satisfaction with ethnic reconciliation and integration (including political voice)]

14. Do you feel that all groups of people in Kyrgyzstan have equal opportunities in life?
   - Economically? Politically? Educationally? Other?

15. What do you think about interethnic relations in the country?
   - What factors and conditions are the main causes of ethnic tensions?
   - How could relations be further improved?
   - What role can youth play in improving ethnic relations?

[Ascertain affinity towards violence as an acceptable expression of grievance]

16. Do youth in your community engage in behaviors that make you concerned about violence?

[Ascertain attitude towards jihadi organizations]

17. What can you say about the situation in Iraq and Syria?
   - What do you know about ISIS?
   - Do you believe that ISIS may become active in Central Asia?

18. Have you heard of radical trends in Islam?
   - What drives radical trends and organizations in Islam?
   - What do you know about such radical organizations in Kyrgyzstan?

Thank the respondent for his/her time and helpfulness.

Leave contact information for Mercy Corps Bishkek, in case the respondent has any subsequent questions.

Appendix III: Snowball Initiating Geographies

- Snowball initiating geographies display evidence of high remittance-recipient; rural and urban; ethnically homogenous and ethnically heterogeneous.

- **Osh oblast:** Osh city, Mady village, Tepe-Korgon, Chek-Abad and Mirmachmudova ayil okmotus.

- **Jalal-Abad oblast:** Jalal-Abad city, Yrys village, Suzak village, Bazar-Korgon village, Ala-Buka rayon (center).

- **Batken:** Batken city, Isphana and Kyzyl-Kya towns, Uch-Korgon v., Andarak v., Masalieva ayil okmotu, Samarkandek ayil okmotu.
Appendix IV: Consolidated Comments on Research Recommendations from Roundtable participants in Bishkek, Osh, Jalalabad, Batken, and Issyk-Kul

In early May 2016, Mercy Corps hosted roundtable events in Bishkek, Osh, Jalalabad, Batken, and Issyk-Kul to review findings and recommendations from its research in Kyrgyzstan. Participants in these roundtables included representatives from local and national government, Ayil-Okmotu, community leaders, religious leaders, civil society, and international organizations. The following comments have been consolidated from across the four provinces and categorized and grouped under the recommendation headings that most closely correspond with the recommendations in the research. These comments should not be viewed as comprehensive minutes from these roundtables; rather these are the main points from the discussion that provide texture to the recommendations. Opinions expressed are exclusively those of the participants.

**Build greatest trust in government through community engagement**

- It is necessary to enhance the action of national policy in the field of youth support and development, which should be financially secured by appropriate means. Therefore, to increase the level of trust in the authorities is necessary to meet the needs of young people in social, political and economic spheres, designating them in a strategy of youth policy and separately note the efforts to prevent youth involvement in religious radicalism and extremism. Also important is to strengthen the control of the implementation of the strategy in a timely manner to assess the achievement of objectives and indicators.

- A good method for public involvement in local development is the maximum participation in public hearings on all important aspects of the functioning of local self-governments. The population is not involved in this process, carried out all for show, and then they themselves are unhappy that the administration of aiyl okmotu does not do anything. It is necessary to promote among population informed participation in public hearings, in the development of local development strategies, to be the real life participants in decision-making and feel a shared responsibility.

- Territorial governments and local authorities need to carry out mobilization work for the participation of all population groups and young people in the meetings with the deputies;

- Make the agenda of meetings of government officials and deputies with the population in accordance with the recommendations and questions received at the previous meetings, provide feedback; it is necessary to ensure coordination between all branches of government bodies and executive authorities when considering the relevant issues raised by the public. In every possible way to bring to the attention of the population of the intermediate and final results to address these issues.

- At the moment, the Ministry of Youth is abolished; in each aiyl okmotu the relevant positions of youth specialists have also been cut. Hence, the quality of work to improve the situation of young people has really reduced. It is necessary to renew the staff unit in aiyl okmotu to put back responsible for working with the youth.

- The state should actively encourage and support the establishment and activities of youth organizations and associations.

- It is necessary to introduce the practice of periodic personal accountability of government leaders and deputies to the population on current activities and the specific tasks and commissions received in the previous period.

- It is necessary to increase the legal knowledge of the population to know both rights and responsibilities.

- It is necessary to ensure the sustainability and stability of the work of the Government of Kyrgyzstan. Since sovereignty, 28 prime ministers have changed and accordingly change the entire composition of the government. New ministers do not have time to understand the situation and do not have time to show results.
• Increase confidence in the authorities through solving local problems, problems of youth;
• There should be more involvement of young people to take jobs in government agencies, local government bodies, state administrations of the district, province and national levels (youth - new ideas, new approach). The current political elite do not allow potential young people from the outside, there are young people with a decent education, with high potential and the desire to change, but they do not find themselves of use in Kyrgyzstan and often forced to migrate to other countries, where they become demanded specialists;
• Courts should not depend on the government.
• There are strategic development plans present at all levels of administrative and territorial divisions, which also include measures designed to tackle youth issues. But often these plans and activities are declarative and not systematic in nature. This approach cannot ensure stable and positive impact on young people. Youth work is done randomly and not regularly. It is necessary to adopt a comprehensive national program for youth development in Kyrgyzstan.
• It is necessary to involve in to the community service and in to the dialogue with authorities not only "organized" young people (pupils, students, NGOs), who are already active, participate in social and youth activities, and do not violate the laws. It also necessary to involve those young people who are at high risk including separated, unemployed, poor, etc. who have more problems and more dissatisfaction.

Strengthen a shared sense of national identity through a national integration plan
• Concept of strengthening the unity of the people and inter-ethnic relations is already available and is being implemented. It is necessary to make additions and changes, taking into account the study results, in terms of enhancing monitoring the implementation of the concept and assess the degree of achievement of targets and indicators. Also, the state policy in the sphere of inter-ethnic relations should be equipped with mechanisms and procedures for its implementation and must necessarily be financially underpinned. Responsible parties should include: Department of Ethnic Policy of the Office of the President of the Kyrgyz Republic, State Agency for Local Self-Government and Inter-Ethnic Relations, Assembly of Peoples of Kyrgyzstan.
• It is necessary to focus significant attention on the quality of the implementation of the country level concept in the sphere of inter-ethnic relations.
• Abandon the use and manipulation of ethnic differences in the political space. Work must be done to eliminate the use of the words "inter-ethnic or inter-ethnic conflicts" in the lexicon. Now it is gradually getting better. No need to compare all small scale household level discrepancies of two people as inter-ethnic issues, but rather to create conditions for the elimination of differences and separateness of the various ethnic groups.
• Strengthen the work on the formation of civic identity; put forward a unifying national idea "We Kyrgyzstan people", based on the principles of non-discrimination and the rule of law. Promoting this idea through the media and other means of communication.
• Adopt a program for systematic education of culture of inter-ethnic dialogue and tolerance in educational and training institutions.
• Exclude from Kyrgyzstan passports ethnicity category, it is enough to indicate citizenship.
• The law on the mass media needs to strengthen the monitoring of compliance with the reflection of the sensitivity of inter-ethnic relations. There should be more restraint in articles in specifying the ethnicity of participants in the events. Even if there was a criminal incident, it is not necessary to indicate the ethnicity of the participants.
• Promote success stories "international families" / "mixed marriages" as a model of ethnic integration.
• Create the conditions for ethnic minorities to learn the state language and at the same time create conditions for studying their native language, culture and traditions.
• Create the appropriate conditions for civil servants in learning the state language while they are on their jobs.
In order to encourage studying the state and Russian languages by the representatives of other ethnic groups living in the Kyrgyz Republic, it is necessary to introduce testing for knowledge of Kyrgyz and Russian languages for admission to the civil service.

Create and expand opportunities for the study of the state (Kyrgyz) and official (Russian) languages of other ethnic groups, to provide with the necessary literature, to increase the hours of studying of the Kyrgyz language in schools with Uzbek language of instruction. Young people living in mono-ethnic(Uzbek) villages, areas, studying in schools with Uzbek language of instruction do not have sufficient capacity and knowledge to continue their education and get higher education, as universities are teaching at the state and official languages.

For rapid integration of young people and the creation of opportunities for continuing education in the universities of Kyrgyzstan, in Uzbek schools it is expedient to strengthen education in the state language.

To increase confidence in the government and the promotion of the state language, broadcast through electronic and broadcast media social videos, cartoons, etc.

To strengthen inter-ethnic harmony, create the conditions for learning state language, and expression of interest for the study of the state language among ethnic minorities. This, in turn, would create good preconditions for the development of inter-ethnic integration and consolidation.

Strengthen the control on the observance of equal rights and opportunities for employment of young people in the personnel policy. The priority must be the professionalism of the potential candidate, not his ethnicity.

We all are citizens of Kyrgyzstan. So cut the ethnicity part from identity documents (e.g., passport), and just state: “Citizen of KR”. To develop a sense of civic identity, indicate only the citizenship in passports of citizens of the Kyrgyz Republic.

Use community development to promote stronger inter-ethnic connections between youth

The division of land plots should adhere to a mixed arrangement of different ethnic groups.

Inter-ethnic relations are not improving due to the fact that no appropriate measures were taken by the state, it was necessary to gradually create a "mixed schools" (with two, three languages of instruction), and even increase the share of Kyrgyz-schools, so that the conditions were created for communication and dialogue between children, to establish friendly relations. As a result, children from ethnic minorities would have mastered the state language at the appropriate level, and their opportunities for further education, employment would be expanded.

Now there are many approaches and methods of work in the field of strengthening of interethnic relations, particularly in the education system. The Ministry of Education and Science should conduct a systematic analysis of different methodologies: how they are beneficial and really benefited and continue to recommend for implementation.

Parents should regularly talk with their children to establish communications and friendly relations with friends, regardless of ethnicity. Also, it is necessary in the presence of their children to be careful and refrain from negative statements related to stereotypes and intolerance towards ethnic minorities.

The state in the first place should pay attention to ensure the availability of pre-school facilities for all children. Especially kindergartens serve as a platform for dialogue and communication between children of different nationalities, mastering the state language and to obtain an appropriate education.

In order to avoid the isolation of the population along ethnic lines, kindergartens, schools should be with mixed language of instruction.

During allocation of new lands for construction of houses by local state authorities poly-ethnic composition of the population must be observed. Authorities should issue lands in a mixed way to representatives of different ethnic groups. After a certain time, it will inevitably lead to their close ties and kinship.

Replace in the speeches of officials and representatives of public administrations, who often give speeches in front of the youth, the term "Kyrgyzymdyn Jashtary" (Kyrgyz youth) to "Kyrgyzstandyn Jashtary"
Develop links between the mono-ethnic schools, villages, areas so that young people can get acquainted with the culture and customs of other ethnic groups and create opportunities to establish contacts and friendly relations.

Enhance confidence in the electoral process and greater involvement of migrant youth

- The last elections were one of the clearest, although cases of vote buying were not excluded. But in fact, public confidence in the electoral process remains the same / low. To increase the level of confidence is necessary to strengthen the work of on-demand fulfillment of election promises.
- Consider the introduction of electronic methods of voting in elections for labor migrants abroad.
- It is necessary to create conditions for the votes of those who are outside of the Kyrgyzstan, in the places of compact residence of citizens of the Kyrgyz Republic.
- Introduce an examination on the legal basis of local self-government and professional level for candidates for deputies of local councils in order to improve the quality of the composition of the people's representatives.
- To create necessary conditions for voting, such as the geographic accessibility. In Russia in the last elections only three polling stations were open from the Far East to St. Petersburg, which is negligible based on the number of migrants in the Russian Federation.
- Create possibility to leave children for a visit to the polling station, since kindergartens on the day of elections do not work and there are no other opportunities to leave children. As a result, women often do not participate in the elections.
- Carry out explanatory work. Especially during elections, vulnerable parts of the population are passive, such as migrant workers, women, voters with disabilities. It is necessary to conduct more outreach with them and create conditions for participation Sometimes for religious reasons some refuse to take part in the elections (e.g., women were forbidden, etc.).
- Return to one mandate system from party system, as it is easier to demand one person to keep a promise.
- To prevent and not to allow bribery of voters, buying of votes and mandates go back to the majoritarian election system.
- Include the subject “political science” at schools (10, 11 grades).
- Conduct sessions with young activists.
- Punish bribers and bribe takers.
- Introduce anticorruption activities (e.g., programs, booklets, ads).
- Avoid manipulations with voters' lists. In preparation for the elections, the territorial election commission provides updated lists of voters to higher authorities. However, in the lists there are long-dead and moved people, and simultaneously it turns out that a lot of people who live in this polling station are not on the list.

Build awareness and tolerance of differences in religious traditions at school

- In the Concept in the religious policy of the country all of these recommendations are already present.
- It is necessary to expand the sources of information on the history of world religions, religious movements and others that would fill the information vacuum among young people.
- The young people are idealistic so they need a mechanism that will show how to choose the right way to the religion.
- Also we should have a subject on Religious Vision at school – and prepare teachers for this.
- Inside of the governmental policy there is the point about the development of Education in Religious Studies – the concept in: 1. The history of Religious Culture – what was religion like historically in Kyrgyzstan. The purpose is to educate on tolerance; 2. Reformation of Religious Studies to strength the social integration in the communities, so they could adapt in society and study in governmental educational institutions.
- The representative of one aiyol okmotu told a story. One day two women got into marshrutka wearing black
dress which covered all the body and face except eyes. Children in marshrutka seeing them started yelling and crying. I asked the driver to pull over and asked those women to get off the marshrutka. She explained that we do not know what these women are carrying under the dress, it can be anything. Also she told they conducted explanatory work at schools telling the students that Kyrgyz girls should not wear hijabs. Hijab is the traditional dress of Arab people but not Kyrgyz people. Kyrgyz people have traditional, beautiful dress. Our ancestors never wore hijabs and they all followed Islam. She also told that she spoke with local Mullah on this issue and he is fully agree with her. It is not necessary to wear hijab. Traditional Kyrgyz dress is good.

- Mullahs receive trainings abroad (Saudi Arabia, Pakistan, India) and Muftiyat do not know on which trends they were trained. After arrival in Kyrgyzstan these mullahs train Islam in different ways. The concern is there is no tracking over Mullahs on what they are preaching. There were cases when they were preaching forbidden radical trends as Salafism, Wahhabism. There is no general correct Islam preaching among the population. Mullahs are not well and properly educated on Islam.
- Training and certification of religious leaders is necessary.
- Monitor the involvement of young people, especially children in religious education and observance of religious attitudes. Before adulthood, prohibit children from missing school to attend Friday prayers in mosques. Increase the responsibility of parents for the actions of children.
- Restrict the propagation of religion by the media, especially from TV. There are too many television programs preaching Islam - an open propaganda, which should not be in a secular State like Kyrgyzstan.
- Systematically monitor the activities of all madrasas, mosques, in which youth are trained, the qualifications of imams and religious orientation, to develop common standards and to introduce compulsory certification for imams and teachers in the madrassas.
- Introduce the subject of "Religious Studies" in schools, universities, vocational schools and colleges.
- It is necessary to introduce the subject "Religion" in the curriculum of schools.

Provide youth with greater coping skills to resist the influence of violent groups
- Extend the concept of terminology on “life skill trainings”. Are they guides or instructions or specific curriculum?
- It is necessary to intensify the work on elaboration/dissemination of arguments to counter religious extremism. Spread practical actions on its consequences through examples of specific families.
- Strictly adhere to the norms of the law of that up to 17 years the child must attend school as much as possible to limit the study in madrassas with complete separation from the school and parents.
- Increase the capacity of teachers, especially in primary school, in the area of early detection of children at risk.. Primary school teacher every day has to watch every child in time to detect susceptibility to negative acts. In Western countries, for the 7, 8, and 9 grades safety instructions are provided to teachers (e.g., what to do and how to act in a particular situation). Maybe it is worth studying these issues in terms of applicability in our country.
- The most important youth is in school (8-11 grades). There’s a need to work with them. Girls don’t know much about the variety of occupations so it is important to catch the moment where they lose their way and, of course, get into religion.
- Include at schools the new subject “religion studies” in order to avoid different interpretation of Islam.
- Certify all Mullahs across the country and control them.
- Register and certify Dawah callers.
- Work with young activists on religion.
- Control religious websites and social networks
- Coordinate closely with rayon and oblast departments of education on religion issues.
- To show documentary films in education institutions about Islamic State. (e.g., killing innocent people, sexual slavery, wrong interpretation of Islam).
- Provide support from the State for proven and effective coping mechanisms, such as forum theater, leadership schools, etc.
At the local level, representatives of active youth should work in conjunction with the 10 Department of MIA, local police, imams, Ayil Okmotu to strengthen work on prevention of religious extremism and radicalism.

Expand counter-narratives on violent extremism to create more specificity on risks

- It is necessary to strengthen the responsibility in the Criminal Code to prosecute individuals suspected of recruiting to Syria. Now they are only categorized under the article "mercenary" and after some time they are released to freedom.
- Show more films and videos in the Friday prayers, using the knowledge of the theologians and scholars such as Kadyr Malikov and others.
- Strengthen the rigid control over those who lead training on Islam and preaching work at home, especially with women.
- The 10-th department of MIA of Kyrgyzstan conducted marathons and distributed booklets. These booklets were distributed at fairs. They conducted lectures and closely work with young activists. As a result of these activities 50% of the population was reached. More funds are needed to cover the rest of the population.
- During Dawah preachers convince people – mainly unemployed people -- to join Dawah. Nobody is tracking these Dawahs (e.g., What and how they are preaching.)
- When disseminating information to avoid propaganda, avoid the reverse effect, do not cause interest in the negative phenomena.
- The State has to initiate "Month of propaganda against extremism," videos, cartoons, TV programs should be distributed through the media. It is necessary to change the way of thinking: people are willing to fund the construction of mosques, and secular education of children is completely the responsibility of the State; propaganda against "Da'wah" (preaching of Islam) (Islamic movement "Tabligi Dzhamaat") is not effectively carried out.
- The school authorities and teachers should be held responsible for hiding and concealing cases of violations on the part of pupils and school racketeering (To avoid penalties they often hide cases of violations on the part of the pupils, since the primary responsibility entrusted to them, rather than the parents);
- It is necessary to promote information against extremism, violence, and adherence to religious militants using specific examples of those who were involved in it, what happened to them and their families.

Other Recommendations

- Create economic incentives for those entrepreneurs who facilitate the employment of young people; promotion and support of small and medium-sized entrepreneurship;
- Support design and technology education at schools, improvement of material and technical bases of schools to inculcate pupils with job skills before completing 9th grade;
- Systematic analysis of labor market, vocational guidance of school pupils, creation of incentives for working specialties (for blue-collar jobs);
- Create workspaces in order to avoid outflow of people.
- Track labor migrants going abroad.
- Raise social living standard in Kyrgyzstan.
- Work with parents on child care and education
- Raise salaries of teachers.
- Improve education and skills of young people.
- Create employment opportunities for youth.
- Limit the "Adhan" of one mosque per village; track to the volume of the speaker during a call to prayer to be not above certain standards
- Stimulate the desire of young people for secular education. Create a "school of young leaders" in the communities.
• Provide support at the state level for social rehabilitation, adaptation for women and children who find themselves in difficult situations (when there is no place to live, nothing to eat, etc.). There are times when in desperation women with young children are forced to leave acquired places as her husband migrated and left the family, mother-in-law evicts from the house (according to one of the participants, the percentage of women who went to Syria, has increased from 1% to 23% out of the total number of who left to this country).

• Discontinue the practice of detention in prisons of persons sentenced under articles of extremism and terrorism in common cells with other convicted criminals.
