The U.S. Agency for International Development (USAID) is committed to helping countries meet the family planning and reproductive health needs of their people. Voluntarism and informed choice are guiding principles of our program. We are the world’s largest bilateral donor of family planning assistance; the Agency’s bilateral family planning and reproductive health program budget for FY 2016 was $567 million.

When USAID launched its family planning program in 1965, fewer than 10 percent of women in the developing world (excluding China) were using a modern contraceptive method, and the average family size was over six. Today, in the 31 countries where USAID focuses its support, modern contraceptive prevalence has increased to 30 percent, and average family size has dropped to 4.4. The Guttmacher Institute estimates that in FY 2016, the U.S. international family planning assistance budget translated into reaching 27 million women and couples with contraceptive services and supplies, helping to prevent 11,000 maternal deaths and six million unintended pregnancies.

The Challenge
When a woman bears children too close together, or too early or late in life, her own health and her baby’s health are at risk. Expanding access to voluntary family planning is vital to safe motherhood, healthy families and prosperous communities.

Yet, more than 214 million women in developing countries who want to avoid pregnancy are not using a modern method of contraception.

The Opportunity
Each year, greater access to family planning has the potential to:

- Prevent up to 30 percent of the more than 287,000 maternal deaths that occur
- Save the lives of 1.4 million children under 5 years old in our priority countries

Program Goals
As a core partner in Family Planning 2020, USAID is working with the global community to reach an additional 120 million women and girls with family planning information, commodities and services by 2020.

The Benefits of Family Planning

- Protects women’s and children’s health by reducing high-risk pregnancies and allowing sufficient time between pregnancies
- Reduces HIV and AIDS through the prevention of new HIV infections and mother-to-child transmission via increased access to voluntary family planning information, services and commodities, including condoms
- Decreases abortion
- Advances individuals’ rights to decide their own family size
- Improves women’s opportunities for education, employment and full participation in society
- Reduces poverty by contributing to economic growth at the family, community and national levels
- Mitigates the impact of population dynamics on natural resources and state stability

USAID’s family planning program also makes substantial contributions to the Agency-wide goals of Controlling the AIDS Epidemic and Preventing Child and Maternal Deaths. Of the program’s 24 priority countries, 23 are also priorities for Maternal and Child Health programs.

Our Approach
USAID’s Office of Population and Reproductive Health has played a critical role in this progress in USAID-assisted countries through field-driven program design, comprehensive technical support, timely and authoritative research, global leadership and high-impact partnerships. The Office supports all the key components of effective family planning and reproductive health programs: service delivery, performance improvement, contraceptive supply and logistics, health communication, biomedical and social science research, policy analysis and planning and monitoring and evaluation. Our reproductive health portfolio includes integration with maternal and child health and HIV programming, gender-based violence and addressing gender norms. In addition, the Office puts special emphasis on program approaches and issues that are under-resourced in country programs but hold promise for accelerating progress.
Where We Work
USAID advances and supports voluntary family planning and reproductive health programs in nearly 40 countries across the globe. We focus our family planning and reproductive health work in 24 high-priority countries and the Francophone West Africa region, where the need for family planning is greatest. Of the program’s 24 priority countries, 23 are also priorities for Maternal and Child Health programs, maximizing opportunities for integration and synergy.

Since the inception of the USAID family planning program in 1965, 24 countries have “graduated” from USAID assistance – having reached high levels of modern contraception use (between 51 percent and 70 percent) and low levels of fertility (between 2.3 and 3.1 children per woman).

Legislative and Policy Requirements
USAID’s family planning program is guided by principles of voluntarism and informed choice and the restrictions on abortion that are articulated in legislative and policy requirements and program guidance. USAID takes these requirements very seriously and works with partners to ensure compliance in their programs.

USAID successfully programmed family planning and reproductive health assistance under the Mexico City Policy requirements from 1984-93 and 2001-09 and is currently programming under the Protecting Life in Global Health Assistance policy.

Notable Contributions
- Since 2008, USAID efforts to prevent child and maternal deaths, which include family planning and reproductive health, have contributed to saving the lives of more than 4.6 million children and 200,000 women in priority countries.

- USAID pioneered the world’s largest survey research effort, the Demographic and Health Surveys (DHS) Program. The Agency provides technical assistance to implement over 300 household and facility-based surveys across Africa, Asia, Latin America/Caribbean and Eastern Europe.

- USAID was involved in developing nearly every modern contraceptive method available today. These investments have benefited women abroad as well as women here in the U.S.

- USAID works closely with other donors and contraceptive manufacturers to increase access to voluntary family planning and leverage funding. This collaboration has resulted in lowered prices of both injectable contraceptives and contraceptive implants, the latter by 50 percent.

Commodities Donated in Fiscal Year 2016

637 million male condoms
18 million injectables
26 million oral pills
1 million IUDs
2 million implants
300,000 CycleBeads

November 2017
