### Family Planning Timeline

#### Before 1965
- Congress amends the Food For Peace Act to authorize USAID to use funds to manufacture and distribute medical supplies, including contraceptives.

#### 1965
- USAID sponsors pilot projects and develops community-based distribution systems that bring family planning information and services door-to-door.
- USAID population and reproductive health program begins.

#### 1966
- Congress amends the Food For Peace Act to authorize USAID to use funds to manufacture and distribute medical supplies, including contraceptives.

#### 1967
- With strong bipartisan support, Congress authorizes foreign assistance for family planning.

#### 1968
- USAID makes its first purchase of contraceptives for distribution in developing countries.

#### 1969
- President Nixon describes population growth as "one of the most serious challenges to human destiny in the last third of this century."
- The Office of Population is established to provide leadership, initiative, coordination, technical assistance, and assistance in developing and conducting population/family planning activities.

#### 1970s
- Population programs expand to address such critical issues as maternal/child health and population and the environment.

#### 1971
- USAID recognizes a "resource gap" between the cost of population programs and donor/public sector funding. USAID engages the private sector to meet the growing need.

#### 1972
- USAID issues a policy paper stating that family planning programs will be based on fundamental principles of voluntarism and informed choice.
- USAID’s Office of Population begins supporting reproductive health training and international surveys, such as the Demographic and Health Surveys (DHS). DHS are large national household surveys that provide data for program monitoring and evaluation.

#### 1973
- The Helms Amendment to the 1961 Foreign Assistance Act prohibits USAID from promoting or funding abortion.

#### 1974
- President Ford tells the World Population Conference in Bucharest that how the world copes with its burgeoning population is "vital to the future of mankind."

#### 1975
- President Ford tells the World Population Conference in Bucharest that how the world copes with its burgeoning population is "vital to the future of mankind."

#### 1976
- USAID sponsors pilot projects and develops community-based distribution systems that bring family planning information and services door-to-door.
- USAID population and reproductive health program begins.

#### 1977
- USAID issues a policy paper stating that family planning programs will be based on fundamental principles of voluntarism and informed choice.

#### 1978
- USAID's Office of Population begins supporting reproductive health training and international surveys, such as the Demographic and Health Surveys (DHS). DHS are large national household surveys that provide data for program monitoring and evaluation.

#### 1979
- USAID recognizes a "resource gap" between the cost of population programs and donor/public sector funding. USAID engages the private sector to meet the growing need.

#### 1980s
- USAID makes its first purchase of contraceptives for distribution in developing countries.

#### 1981
- USAID announces a policy recognizing female genital cutting as "a harmful practice that violates the health and human rights of women and hinders development."

#### 1982
- USAID recognizes "Mexico City policy," a regulation that prohibits non-U.S. nongovernmental organizations receiving USAID population assistance funding (either directly or through sub-awards) from using their own or other non-USAID funds to provide or promote abortion as a family planning method.

#### 1983
- USAID and its cooperating agencies spearheaded Maxsiming Access and Quality (MAQ), an initiative to improve service delivery and to better serve clients.

#### 1984
- President Reagan announces the "Mexico City policy," a regulation that prohibits non-U.S. nongovernmental organizations receiving USAID population assistance funding (either directly or through sub-awards) from using their own or other non-USAID funds to provide or promote abortion as a family planning method.

#### 1985
- USAID announces a policy recognizing female genital cutting as "a harmful practice that violates the health and human rights of women and hinders development."

#### 1986
- USAID makes its first purchase of contraceptives for distribution in developing countries.

#### 1987
- USAID sponsors pilot projects and develops community-based distribution systems that bring family planning information and services door-to-door.

#### 1988
- USAID population and reproductive health program begins.

#### 1989
- USAID issues a policy paper stating that family planning programs will be based on fundamental principles of voluntarism and informed choice.

#### 1990s
- USAID recognizes "Mexico City policy," a regulation that prohibits non-U.S. nongovernmental organizations receiving USAID population assistance funding (either directly or through sub-awards) from using their own or other non-USAID funds to provide or promote abortion as a family planning method.

#### 1991
- USAID and its cooperating agencies spearheaded Maxsiming Access and Quality (MAQ), an initiative to improve service delivery and to better serve clients.

#### 1992
- USAID announces a policy recognizing female genital cutting as "a harmful practice that violates the health and human rights of women and hinders development."

#### 1993
- President Clinton rescinds the Mexico City policy.

#### 1994
- USAID announces a policy recognizing female genital cutting as "a harmful practice that violates the health and human rights of women and hinders development."

#### 1995
- President Clinton rescinds the Mexico City policy.

#### 2000s
- USAID announces a policy recognizing female genital cutting as "a harmful practice that violates the health and human rights of women and hinders development."

With more than 35 years of experience, the U.S. Agency for International Development (USAID) has long been the world leader in supporting voluntary family planning programs in the developing world. By enabling women and couples to have the number of children they want and by helping them space their children three to five years apart, family planning has markedly improved maternal and child health.

**The Office of Population & Reproductive Health (Pop/RH) becomes part of the newly established Bureau for Global Health.** The focus of Pop/RH work remains constant, but there are new emphases on contraceptive security and combating HIV/AIDS through family planning. Male involvement and through the new YouthNet program, the reproductive health needs of adolescents and young adults remain important program areas.
USAID programs have trained networks of midwives, healers, and traditional birth attendants to provide family planning services. These networks increase the quality of family planning/reproductive health services and their availability.

Private sector initiatives have expanded contraceptive social marketing, pursued joint projects with commercial providers, worked with media and entertainment industries in communication campaigns, and encouraged employers to include family planning in health benefits packages.

USAID helps governments review policies, restrictive or unnecessary regulations, and product bans that are barriers to private sector involvement in offering family planning/reproductive health services.

• To increase access to family planning and reproductive health services, USAID introduced such innovations as door-to-door distribution, mobile clinic services, and employee-based health care programs.

USAID Family Planning and Reproductive Health Program

A History of Achievement

• Since USAID’s family planning program began in 1965, the average number of children per family in the developing world (excluding China) has dropped from 6 to 4.

• USAID provides 35 to 40 percent of donor-provided contraceptives to the developing world and supplies nearly 30 family planning programs in 20 countries with technical and logistical support.

• Contraceptive use has increased in many parts of the world. In Brazil, a country that has “graduated” from USAID family planning assistance, contraceptive use exceeds the 50 percent mark.

• USAID supports the Demographic and Health Surveys, the world’s largest survey research effort. Since 1972, results from more than 70 countries have revolutionized our understanding of population and health dynamics.

• Support for safer and more effective family planning methods has brought many technical advances, including natural family planning methods, improved oral contraceptives, barrier methods, and NORPLANT™.

• USAID works to improve contraceptive security. Contraceptive security exists when every person is able to choose, obtain, and use high-quality contraceptives whenever she or he wants them.
