USAID MIKAJY
CONSERVATION AND COMMUNITIES

LOCAL SOLUTIONS
USAID Mikajy will support local communities in western and northeastern Madagascar to sustainably manage and benefit from their natural resources.

COMMUNITIES IN CONTROL
USAID Mikajy, as part of USAID’s Conservation and Communities Project (CCP), will demonstrate the extraordinary value of letting local communities lead the way. Through an integrated approach focused on resilience, the CCP will improve conservation of unique biodiversity, promote sustainable livelihoods, and secure effective local governance and ownership of natural resources.

INTEGRATED APPROACH
USAID Mikajy’s work will be guided by three primary objectives.

1. Strengthen Natural Resources Management
2. Improve Local Communities’ Well-being Through Economic Development and Social Support Programs
3. Support Community-led Natural Resources Governance Through Land Tenure and Civil Society Strengthening
USAID Mikajy focuses on two regions rich in biodiversity and economic potential. Working directly with local communities who rely on land and sea resources, USAID Mikajy will provide them with tools and knowledge to ensure those resources are available for generations to come.

MaMaBay:
An area in the northeast consisting of protected rainforest landscapes and seascapes, anchored by Makira and Masoala Parks and Antongil Bay, which are high priority zones for lemur and marine conservation. The area is also renowned for its high-value crops, such as vanilla and spices.

Menabe:
A region in the west encompassing protected dry forest landscapes, diverse marine and coastal ecosystems; home to iconic baobabs, rare mammals, reptiles, and birds, offering high potential for fisheries, aquaculture, and tourism.

Legend

- Terrestrial ecosystem territory

OBJECTIVE ONE
SAFEGUARD
Sustainable, Community-based Natural Resources Management
• Community-led development and implementation of management plans to reduce threats to biodiversity
• Empower community-led management of natural resources and ecosystem services
• Build resilience to climate stresses and reduce wildlife trafficking, deforestation, and resource degradation

OBJECTIVE TWO
BENEFIT
Improved Well-being Around Biodiversity-rich Areas
• Assure long-term, broad-based benefits from livelihood activities through gender and youth engagement and climate resilient activities and resilience measures
• Establish partnerships with private sector operators and cooperatives in support of sustainable, environment-friendly enterprises
• Leverage partnerships with other development actors to provide communities with social services

OBJECTIVE THREE
GOVERN
Decentralized Natural Resources Governance and Strengthened Civil Society
• Enhance inclusive tenure of land and natural resources by improving existing systems and promoting innovative approaches
• Involve community-based natural resource management groups into the local development process to establish a lasting framework integrating their interests, rights, and responsibilities
