USAID's "Strate-Chat" Series Presents

What is IWRM's Role in Food Security?

USAID's Water & Development Strategy and donors alike are emphasizing the role of water in food production, with a focus on managing water for agriculture sustainably and more productively to enhance food security. What role does integrated water resources management (IWRM) have in supporting these efforts?

Through a panel led by USAID and the member agencies of the Global Water Initiative (GWI) namely CARE, CRS, and IIED, this event highlights how lessons learned from IWRM can support water and food security programs in East Africa, West Africa and Central America.

An Ethiopian woman is able to better care of her crops after a check dam and watershed irrigation works were constructed in her village. *Photo by Nena Terrell/USAID*

Friday, June 28th
10:00am – 11:30am
Rooms M-17 & M-18, located on
the Mezzanine Level

Ronald Reagan Building
1400 Pennsylvania Avenue
