ETHIOPIA

PHOTO: Fikiru Desalegn

Muktar Mohamed surveys his family's vegetable garden in Ethiopia's Oromia region. This "keyhole" garden, surrounded by stones, requires less water and provides more food to Muktar's family, helping them cope with increasingly frequent droughts.

INDIA

PHOTO: Centers for International Projects Trust

In India's Punjab state, Manpreet Singh uses an inexpensive soil moisture meter to check the status of his rice field. With the moisture meter, he doesn't have to irrigate as frequently, conserving precious water during drought.

MADAGASCAR

PHOTO: Ron Savage

On the coastal plains of Eastern Madagascar, women plant fast-growing rice varieties that use less water and increase organic matter in the soil, helping to curb the greenhouse gases that heat up the atmosphere.

COLOMBIA

PHOTO: Hanz Rippe

Something new has arrived in the Guajira desert in northern Colombia – a solar energy water-pumping system. The intense sun provides energy to pump up water during the day. At night, the local water truck fills its tanks to carry water to nearby indigenous communities.

COVER PHOTO: Ron Savage

In the Dominican Republic, USAID is helping farmers use drip irrigation and other techniques to produce more papaya and other crops on less land. Nearby landscapes are being managed to capture and store carbon, maintain water cycles and conserve bio-corridors.
