The United States, through the U.S. Agency for International Development (USAID), has established the Agriculture Resilience Initiative (AGRI) - Ukraine to bolster Ukrainian agriculture exports and to help alleviate the global food security crisis exacerbated by Putin’s brutal war on Ukraine. AGRI-Ukraine is critical to supporting Ukraine’s export and agricultural sector, which will remain vulnerable to and affected by the Russian Federation’s aggression in the months and years to come.

AGRI-Ukraine will target Ukraine’s immediate agricultural production and export challenges, while also simultaneously supporting the wider needs of Ukraine’s agriculture sector and bolstering Ukraine’s continued production of agricultural commodities through 2023.

USAID has contributed $100 million and seeks to leverage an additional $150 million for the Initiative, including from fellow donors and the private sector, with an overall target of $250 million. AGRI-Ukraine builds on a range of support USAID is providing to Ukraine’s agriculture sector in the wake of Putin’s full-scale invasion, including providing more than 12,700 Ukrainian farmers with seeds, fertilizers, pesticides, and other assistance, helping approximately 20% of the country’s registered agriculture enterprises deliver this year’s harvest despite the devastation caused by the Russian Federation’s aggression. This effort will bolster the entire agricultural sector, safeguarding this major economic engine for future generations of Ukrainians.

PARTNERSHIP

- Co-Branding
- Tap into USAID expertise on the ground
- Deconflict activities and maximize impact
