

# COVID-19 – Sub-Saharan Africa

FACT SHEET #4, FISCAL YEAR 2022

March 31, 2022

## KEY FIGURES\*

**8.1**

**MILLION**

Total Number of Confirmed COVID-19 Cases in Region

**170,000**

Total Number of Deaths Related to COVID-19 in Region

**115**

**MILLION**

Total USG-donated vaccine doses to the region\*\*

**288**

**MILLION**

Total Number of Vaccine Doses Administered in Region

\*\*US Department of State, as of March 31, 2022.

Figures are subject to change due to periodic adjustment and updating.

## KEY MESSAGES

- USAID works in more than 120 countries to fight against COVID-19 through efforts to address the social and economic effects of the pandemic, mitigate its wide-ranging impacts, and support recovery from COVID-19. USAID works with partner governments, multilateral institutions, non-governmental organizations, and civil society to deliver and distribute vaccines, protect and train health workers, disseminate key public health information, provide emergency food and critical humanitarian services and supplies, provide continuity of basic services, provide social and economic support, and sustain education for millions of students. [USAID's response](#) is guided by the [United States COVID-19 Global Response and Recovery Framework](#). USAID's work is helping to meet the targets introduced by the September 2021 Global COVID-19 Summit convened by President Biden.
- The White House supports the World Health Organization's goal of vaccinating 70 percent of the global population in every country by the end of 2022 and pledged that the U.S. will be the world's vaccine arsenal. USAID plays a pivotal role in U.S. contributions to this goal. Throughout 2022, USAID will continue to support the donation of more than 1.2 billion U.S.-made doses to low- and lower-middle-income countries. USAID will also continue to provide financial and technical assistance to deliver and administer vaccines in more than 110 countries through the U.S. Government's Initiative for Global Vaccine Access (Global VAX). Global VAX is a whole-of-government effort, through which the United States has already committed more than \$1.7 billion to support vaccine readiness work. Global VAX includes a wide range of activities to help turn vaccines in vials into vaccinations in arms including investing in cold chain and supply logistics, building mobile vaccination sites, assisting with strategic planning to deploy more health care workers and resources, fighting misinformation and disinformation to increase vaccine confidence and demand, training clinical and non-clinical personnel, and developing health information systems to ensure that vaccines are distributed equitably and safely. In sub-Saharan Africa (SSA), Global Vax is surging vaccine delivery support to 11 surge countries: Angola, Côte d'Ivoire, Eswatini, Ghana, Lesotho, Nigeria, Senegal, South Africa, Tanzania, Uganda, and Zambia.
- Across SSA,<sup>1</sup> USAID is contributing to vaccination efforts by establishing vaccination sites, developing vaccination plans, and spearheading communication campaigns. Additionally, USAID and its partners are working to strengthen health care systems and respond to acute needs by supporting programs that address a wide range of first- and second- order effects of the pandemic.

TOTAL USAID FUNDING FOR THE COVID-19 RESPONSE IN AFRICA	
USAID Bureau for Africa	\$352,969,345
USAID Bureau for Humanitarian Assistance (BHA)	\$1,255,610,513
USAID Bureau for Global Health (GH)	\$230,718,133
	<b>\$1,839,297,991</b>

<sup>1</sup>The SSA region includes Angola, Benin, Botswana, Burkina Faso, Burundi, Cabo Verde, Cameroon, Central African Republic (CAR), Chad, Comoros, Côte d'Ivoire, the Democratic Republic of the Congo (DRC), Djibouti, Equatorial Guinea, Eswatini, Ethiopia, Gabon, The Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Namibia, Niger, Nigeria, the Republic of the Congo (RoC), Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, South Sudan, Sudan, Tanzania, Togo, Uganda, Zambia, and Zimbabwe.

<sup>2</sup>The figures represent publicly announced committed funding or obligations of the 2021 American Rescue Plan Act, 2020 Coronavirus Preparedness Act, the 2020 CARES Act Supplemental Funding, and Prior Year funding completed by March 31, 2022. They do not include redirections, nor do they include base funds that were used to respond to COVID-19. Amounts may include funds appropriated by Congress to the Department of State for HIV/AIDS allowed to USAID.

---

## KEY DEVELOPMENTS

- Between December 2021 and January 2022, most countries in SSA experienced a major surge in COVID-19 cases fueled by the Omicron variant, with many of these cases concentrated in the Southern Africa region. South Africa has continued to report the highest number of COVID-19 cases and a majority of deaths in SSA, though the true impact of the pandemic on many other countries may not be fully represented in epidemiological data due to testing blindspots and limitations in surveillance systems. Twenty-six countries in SSA experienced historic peaks in weekly reported case counts during the last surge. However, all of these countries, except Burkina Faso, Mauritius, Seychelles, and Sudan, reported lower peaks in weekly deaths than the previous historic peak from prior waves. By February 2022, most countries in SSA were reporting a considerable decline in new COVID-19 cases.
- SSA has seen slow but meaningful progress in vaccination rates, but still lags behind other regions. As of March 31, 12 percent of the region's population had completed a full primary series and 17 percent had received at least one dose of a COVID-19 vaccine, with almost 300 million doses administered.
- Vaccine supply has improved in recent months, with doses delivered in greater numbers and with longer shelf lives due in part to large U.S. Government donations through COVAX. However, despite greater vaccine supply and enhanced efforts to increase vaccination rates, many countries in SSA are experiencing human resource constraints, low vaccine confidence, supply chain and logistics gaps, as well as other challenges that hinder uptake of COVID-19 vaccinations.
- Schools are now open in all countries within the region. Uganda reopened its schools in early January, ending the world's longest school closure. Restoring educational performance to pre-pandemic levels will be a challenge, as will encouraging students to return to the classroom who previously dropped out to support their families. Data shows that the pandemic has had a negative impact on the learning of all students, with low-income and vulnerable students suffering the most.

---

## USAID RESPONSE HIGHLIGHTS

### FACILITATE ACCESS TO SAFE AND EFFECTIVE COVID-19 VACCINATIONS

- As of March 31, 2022, the U.S. Government had delivered nearly 115 million doses of COVID-19 vaccines to 43 countries in SSA.
- Support from USAID and other U.S. Government agencies has contributed to large increases in vaccination rates across SSA. In Zambia, the full vaccination rate nearly doubled in the Copperbelt, Zambia's second most populous region, increasing from 12 percent to 22 percent in a single month. In Uganda, over the course of six weeks in late November and December, vaccination rates jumped from 14 percent to 47 percent of eligible Ugandans receiving at least one dose. In December 2021, the Government of Cote d'Ivoire led a vaccination campaign, which contributed to an increase in vaccination rates from 22 percent to 36 percent of eligible Ivorians receiving at least one COVID-19 vaccine dose. USAID played a key role in these vaccination pushes, by supporting coordination, logistics, community mobilization, and strategic development of mass campaign plans.
- Well-trained staff and volunteers are critical for the success of the COVID-19 vaccine rollout. In December 2021 and January 2022, USAID supported the training of more than 18,600 health workers and related staff on vaccine administration and management, storage and waste management, and other essential topics.
- Between October and December 2021, USAID partners established nearly 1,900 vaccination sites across the region. These included large sites administering significant quantities of vaccines per day, such as mass vaccination sites in Madagascar; small fixed sites, such as those at health centers in Djibouti and HIV treatment centers in Zambia; and mobile and temporary sites, such as those reaching semi-nomadic pastoralists in Kenya.
- Providing information on the importance of COVID-19 vaccines and how to access vaccines has been central to USAID's efforts in SSA. To boost vaccine confidence, USAID and its partners have engaged communities by meeting with faith networks, savings groups, and local populations. In Kenya, USAID collaborated with the Inter-Religious Council of Kenya and the Ministry of Health to create vaccine information, education, and communication materials with information geared

toward multiple religious denominations, and encouraged faith leaders to disseminate the material. USAID and its partners have also worked with local celebrities and religious leaders to create TV, radio, and social media content that aims to dispel misinformation and encourage people to get vaccinated. These messages have reached over 200 million people and are designed to address country- and culture-specific concerns and contexts.

## REDUCE MORBIDITY, MITIGATE TRANSMISSION, AND STRENGTHEN HEALTHCARE SYSTEMS

- In response to the Omicron-fueled surge in cases, USAID quickly provided additional funding to ten countries in southern Africa—including Botswana, Eswatini, Lesotho, Madagascar, Malawi, Mozambique, Namibia, South Africa, Zambia, and Zimbabwe—to strengthen oxygen systems, improve testing, train health care workers, hire additional staff, improve case management, and provide urgent medical commodities.
- USAID has provided support in managing medical commodities, with a focus on proper storage and ensuring efficient use of goods. For example, USAID provided expertise on integrating health commodities like personal protective equipment (PPE) and vaccines into digital systems, enabling improved directing and forecasting of needs. In Lesotho, USAID is helping inform data-driven commodity management by supporting the development of district-level dashboards to track medical commodities. USAID also conducted a workshop on COVID-19 stock status reporting.
- USAID has made substantial investments to mitigate the effects of the COVID-19 pandemic on PEPFAR programs and beneficiaries. These efforts have supported services by ensuring continuity of treatment for people living with HIV by procuring additional stocks of antiretrovirals (ARVs), delivering more ARV doses at a time, and improving virtual and physical tracking of clients. USAID has also built up monitoring capabilities by strengthening laboratory systems for expanding viral load testing coverage, increasing both community index testing and HIV self-testing capabilities, and scaling-up gender-based violence activities to identify, support, and refer clients to care and treatment services and strengthening HIV prevention services.

## ADDRESS ACUTE NEEDS DRIVEN BY COVID-19

- The Democratic Republic of Congo has one of the highest numbers of food-insecure people in the world, with more than 27 million people facing emergency levels of food insecurity. Food insecurity has been exacerbated by the COVID-19 pandemic and subsequent slow down of trade, a result of closing borders and travel limitations. USAID is working with the World Food Program to provide more than 500,000 crisis-affected individuals with in-kind food and cash assistance.
- The ongoing COVID-19 pandemic has exacerbated humanitarian needs in Cameroon, particularly by limiting income-generating opportunities for vulnerable households. In response, USAID and its partners are distributing multipurpose cash to COVID-19-affected households and providing COVID-19 awareness and prevention training to displaced populations and vulnerable host communities in Cameroon's Far North region. In February 2022, USAID supported two distributions of cash to beneficiaries, conducted training on good hygiene practices, and undertook an information and advocacy workshop for community engagement against COVID-19.
- With USAID support, relief actors in Sudan have continued to provide COVID-19 screening, treatment referrals, logistical support, financial assistance to vaccinators, and prevention services to populations with an elevated risk of complications related to COVID-19. During the first quarter of 2022, USAID and its partners produced hygiene promotion messages that reached approximately 31,000 beneficiaries in South Kordofan and North Darfur. USAID also supported the vaccination of more than 15,800 people in South Kordofan against COVID-19 and supplied nearly 40 health facilities with PPE, including antiseptic soaps, face masks, and hand sanitizer. USAID also provided incentives to staff members working in COVID-19 isolation facilities across both states.
- USAID has partnered with the UN in Burundi to facilitate COVID-19 response coordination among humanitarian actors. These efforts include providing assessments, analyses, and reports for humanitarian stakeholders and decision makers on existing needs and responses across several sectors, with a specific focus on the COVID-19 situation. For example, the initiative engaged Burundi's Ministry of Health to provide regular COVID-19 bulletins describing prevalence, testing, recovery, and vaccination levels.

## BOLSTER ECONOMIES AND OTHER CRITICAL SYSTEMS

- In West and Central Africa, USAID has continued to support governments and civil society organizations to communicate COVID-19 messages and facilitate dialogues aimed at increasing trust, improving transparency, and strengthening oversight of government action. For example, USAID supported 10 consensus building dialogues and 20 conflict prevention programs in Cameroon. USAID assistance helped to train 100 organizations and media institutions on advancing respect for freedom of expression and countering misinformation about COVID-19 in Chad, Côte d'Ivoire, Niger, and Mali.
- To address the potentially destabilizing effects of the COVID-19 pandemic on the democratic process, USAID provided assistance to 20 civil society organizations in Benin, Guinea, and Togo. This assistance has enabled local civil society organizations to prevent and mitigate conflict by developing platforms for dialogue, strengthening social cohesion, monitoring and countering misinformation and hate speech, and engaging youth and women as peace mobilizers. USAID and its partners have directly engaged local communities and addressed the impact of the COVID-19 pandemic through early warning and response mechanisms, cross-communal dialogues, education and awareness-raising, and the distribution of PPE in select communities.

### USAID FUNDING FOR THE SSA COVID-19 RESPONSE<sup>3</sup>

Bureau	Partners	Amount
<b>Angola</b>		
USAID/AFR	Chemonics, Development Workshop Angola, Mothers2Mothers South Africa (M2M SA), Population Services International (PSI), World Health Organization (WHO), World Vision	\$8,110,000

USAID FUNDING FOR COVID-19 RESPONSE IN ZIMBABWE		\$48,563,096
<b>TOTAL USAID FUNDING FOR THE SSA COVID-19 RESPONSE<sup>7</sup></b>		<b>1,839,297,991</b>

<sup>3</sup> The figures represent obligations of the 2021 American Rescue Plan Act, 2020 Coronavirus Preparedness Act, the 2020 CARES Act Supplemental Funding, and Prior Year funding completed by March 31, 2022. They do not include redirections, nor do they include base funds that were used to respond to COVID-19. Amounts may include funds appropriated by Congress to the Department of State for HIV/AIDS allowed to USAID for programming. The total does not include the more than \$7.3 billion in USAID assistance for global COVID-19 response operations, including U.S. Government assistance to GAVI/COVAX.

<sup>4</sup> Amounts may differ from previously reported funding due to de-obligation close out costs.

<sup>5</sup> UNICEF support under the West Africa Regional was provided to Equatorial Guinea, Gabon, Sao Tome and Principe, and Togo.

<sup>6</sup> Amounts may differ from previously reported funding due to deobligations.

<sup>7</sup> This total does not include funding for USAID operating expenses (OE). Of the \$95 million in CARES Act appropriated for COVID-19-related OE, approximately \$66 million had been obligated as of March 31, 2022. In addition, USAID transferred \$7 million in ESF-COVID funding (Coronavirus Preparedness and Response Supplemental Appropriations Act) to the USAID OE Account, of which \$6.9 million as of March 31, 2022. Of the \$41 million appropriated in ARPA OE, USAID has obligated \$19.8 million.

---

## ADDITIONAL INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to organizations that are conducting relief operations. USAID encourages cash donations because they allow aid professionals to procure the exact items needed; can be transferred quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietarily, and environmentally appropriate assistance. More information can be found at USAID Center for International Disaster Information: [www.cidi.org](http://www.cidi.org).
- USAID has established an inbox ([covid-pse@usaid.gov](mailto:covid-pse@usaid.gov)) to coordinate private sector engagement around the COVID-19 response. In addition, the UN supports an initiative for businesses seeking to donate money, goods or services. Please visit [connectingbusiness.org](http://connectingbusiness.org) for more information.
- Finally, USAID reminds the public that it may accept unsolicited applications and proposals. The Agency has set up a COVID-19 Concepts portal at: <https://www.usaid.gov/coronavirus/funding-requests-unsolicited-proposal>
